"Aburd!" He is Neapolitan."
"Very well, then! The Neapolitans are absurd!" said Vere with decision. "And what a voice! Baffo doesn't sing like that. That shaking sounds—sounds so artificial."
"And yet I dare say he is very much in earnest."
Artois was almost pleading a cause against his will.

"Oh!"

The girl gave almost a little puff that suggested a rather childish indignation.
"I like the people best," she added. "They say what they feel simply, and it means ever so much more. Am I a democrat?"

He could not help laughing.

"Chi lo sa. An anarchist, perhaps."

She laughed too.

"Bella tu si—Bella tu si! It's too absurd! One would think—"

"What, Vere?"

"Never mind. Don't be inquisitive, Monsieur Emile."

He bowed so meekly.

"There is San Francesco's light," she said in a moment. "I wonder if it is later. Have we been away long? I have no idea."

"No more have I."

Not bad, he

When they reached land he made the boat fast and turned to walk up to the house with her. He found her standing very still just behind him at the edge of the sea, with a startled look on her face.

"What is it, Vere?" he asked.

"Hush!"

She held up her hand and bent her head a little to one side, as one listening intently.

"I thought I heard—I did hear—something."

"Nothing?"

"Yes—so strange—I don't hear it now."

"What was it like?"

She looked fixedly at him.

"Like some one crying—horribly."

"Where? Near us?"

"Not far. Listen again."

He obeyed, holding his breath. But he heard nothing except the very faint lapping of the sea at their feet.

"Perhaps I imagined it," she said at length.

"Let us go up to the house," he said. "Come, Vere."

He had a sudden wish to take her into the house. But she remained where she was.

"Could it have been fancy, Monsieur Emile?"

"No doubt."

Her eyes were intensely grave, almost frightened.

"Where? It's so dark."

"But—just look, will you? Perhaps there really is somebody."

Artois hesitated; but Vere's face was full of resolution, and he turned reluctantly to obey her. As he did so there came to them both through the dark the sound of a woman crying and sobbing convulsively.

"What is it? Oh, who can it be?" Vere cried out.

"She went swiftly towards the sound."

Artois followed, and found her bending down over the figure of a girl who was crouching against the cliff, and touching her shoulder.

"What is it? What is the matter? Tell me."

The girl looked up, startled, and showed a passionate face that was horribly disfigured. Upon the right cheek, extending from the temple almost to the line of the jaw, a razor had cut a sign, a brutal sign of the cross. As Vere saw it, showing really through the darkness, she recoiled. The girl read the meaning of her movement, and shrank backwards, putting up her hand to cover the wound. But Vere recovered instantly, and lent down once more, intent only on trying to comfort this sorrow, whose violence seemed to open to her a door into a new and frightful world.

"Vere!" said Artois. "Vere, you had better—"

The girl turned round to him.

"It must be Peppina!" she said.

"Yes. But—"

"Please go up to the house, Monsieur Emile. I will come in a moment."

"But I can't leave you."

"Please go. Just tell me where I'm soon coming."

There was something inexorable in her voice. She turned away from him and began to speak softly to Peppina.

Artois obeyed and left her.

He knew that just then she would not acknowledge his authority. As he went slowly up the steps he wondered—he feared. Peppina had cried with the fury of despair, and the Neapolitan who is desperate knows no reticence.

Was the real sign of passion to be scored already upon Vere's white life? Was she to pass even now, in this night, from her beautiful ignorance to knowledge?

(To be continued.)

is because poetic and stimulating examples of pantomime are not easily to be found,—which again raises a question: why are there not more examples of this singularly fascinating form of art which are sufficiently fine and imaginative to suggest musical enhancement to a composer of parts? Sarah Bernhardt is said to have expressed the view that the ideal drama of the future will be pantomime with elaborate musical accompaniment, and the idea is now beginning to take its fantastic.

A model for pantomime music of an ambitious sort has been posed by Mr. Edward Rimbault Hill, the Boston composer, who has written music for a fresh and charming pantomime by Mr. Joseph Lamb Smith, called "Jack Frost an Misnomer." We have not been privileged to witness Mr. Smith's pantomime, but we may quote this synopsis of it:

"The scene is set as a garden, with benches topped by hedges at right and left, separated by a broad path running from the center to a fountain at the back of the stage. As the scene opens, a large toad is discovered blinking by the brink of the fountain. A gay moth flutters into the garden, and is at first horrified and then attracted by the toad and his complacent egotism, gloating about him, she vainly tries to allure him, but he resists her efforts and hops clumsily away. Suddenly the wind blows, the air grows cold, and Jack Frost imperceptibly invades the garden in mid summer, glittering icy. He dances through it, and with bitter sniveling touch wads the blooming flowers and shrivels the poor moth. But Summer, rising from the fountain, spreads a bewitching warmth which melts Jack Frost. Her kiss restores each blossom, and at her touch the moth springs like life again, while the icy invader is driven, cringing and discomfited, from the scene."

This innocent and gracious fancy has suggested to Mr. Hill a musical setting that is surprisingly fertile in imaginative resource and significant detail. He has chosen to score for a large orchestra—no much more elaborate orchestra than Wagner requires for "Tristan and Isolde" (including even the Strauss-wind machine!) and there is no earthly reason why he should not have done so. It is to be hoped that we are approaching a day when it will be recognized as an impertinence to quarrel with a writer of orchestral music because of the size or constitution of his orchestra, no matter what the fragility of his subject; as a matter of fact, most writers of programmatic music probably agree that it is possible to paint a thunderstorm with fewer instruments than would be needed to suggest an orchestral movement—indeed, there is a shaft of moonlight in "Pelléas et Mélisande" which enforces its desolation a larger number of instruments than the ingenious Debussy requires in certain far more tumultuous episodes in his score. Therefore, Mr. Hill's formidable apparatus is altogether justifiable and unimpeachable, even though his purpose has been, as he says, merely to give such an accessory for the various scenes and moods suggested by the action. And his orchestra is more than justified by the flexible and suggestive use which he makes of it. He has written here music which is vivid, intimate, in itself, satisfyingly picturesque, direct and adult in its responsiveness to the needs of its subject matter.

The pantomime, with Mr. Hill's music, has been given with prosperity in Chicago and in Boston; it would be interesting to hear it in New York.

Pennsylvania no institution in the South has justified more fully the expenditure of the money of the state for higher education than has the Winthrop Normal and Industrial College of South Carolina. Its conception and origin grew out of the need of trained teachers for the schools. In 1866, through the influence of Mr. Winthrop, President of the Board of Trustees of the Peabody Fund, the money was obtained that made possible the beginning of this institution. The state soon repaid this gift by an appropriation that enabled the school to offer a scholarship to one student from each county. The good effect of this normal training of even a few teachers was so apparent that in 1893 the state chartered the institution and made a general appropriation for its support. Year by year, as the needs of the institution have grown, the state has increased its appropriation. In January, 1908, over \$20,000 was appropriated for general support, and \$12,400 for a building.

As its name suggests, the college has made the interesting experiment of uniting normal and industrial work. Its success has established the fact that this is a possible and a helpful combination. By a wise and skilful adjustment of the work in the two departments, neither is allowed to encroach upon the other. During a good academic course of four years, the student has two years of instruction and practice in the science of Pedagogy, and two years in both Domestic Science and Domestic Art.

In the short life of the institution over two thousand young women have received training here, which they have carried to over one hundred thousand pupils in the schools. Over ninety graduates will go out this year, nearly all of whom will teach, many in the rural schools of the state.

It is a matter of no little significance for a state to bring this kind of education—the happy union of the ideal and the real—to a yearly attendance of over five hundred of its daughters, many of whom, but for this provision, would never be able to go to any college. To send this infusion of educated women back into the schools, where, these main arteries of the life of the state—this is the triumph of democracy. ♦♦

RAZZAH

"Ah, want to buy a razzah?"

"Any particular kind?"

"Yes, ash, Razzah."

Wanted Cautious

SMITH: "What's that piece of cord tied around your finger for?"

JONES: "My wife put it there to remind me to mail her letter."

SMITH: "And did you mail it?"

JONES: "No. She forgot to give it to me."

He Knew

Nor long ago there entered the office of the superintendent of a trading line in Detroit an angry citizen, demanding "justice" in no uncertain terms.

In response to the official's gentle inquiry touching the cause of the demand, the angry citizen explained that on the day previous his wife was borrowing one of the company's cars, the conductor thereof had stepped on his spouse's dress, tearing from it more than a yard of material.

"I can't see that we are in blame for that," protested the superintendent. "What do you expect us to do, get her a new dress?"

"No, air, I do not," rejoined the angry citizen, brandishing a piece of cloth. "What I propose is that you people shall match this material!"

Drink to Me Only with Thine Eyes, Colonel

FOURVEY WATTENSON says that since the passing of the dry laws a Georgia colonel has paid thirty-five dollars for a painting of a cocktail: And a water-color at that!

Spoonng

OH, he was so stout when he came in woo, She cried, as they sat in the moonlight blue, "Twould take a ladie to spoon with you!"

Whereon he answered her cheerily, "You are right, dear heart," he cried with a gleam,

"I've always said that my love should be A lullabye girl like you!"

But the night was damp, and they left full soon, And went to the dining-room, leaving the moon, And finished the thing with a table-spoon, JOHN KENDRICK BANGS.

Consistent

"GIVEN, what is the charge against this man?" inquired the judge.

"He killed me a lobster, your honor," replied the officer.

"Ah," exclaimed the judge, "so you immediately pinched him, eh?"

DRAWN BY DAN SAYRE GROESBECK

Invasion of Prickly-pear

This invasion of the prickly-pear, which has rendered thousands upon thousands of acres of good pastoral and agricultural land in New South Wales and the adjoining Straits colonies, is a problem that has been brought more to the front of late by the big bonus offered by the Queensland government for an effective means of eradicating the pest on a wholesale scale. At the same time, there is a question whether this seeming pest has not its commercial uses. Regarding the matter from this point of view, a Brisbane chemist has, as a result of experiments, accumulated quite a number of means of turning the prickly-pear to useful and highly remunerative account. He sees in this despised plant commercial possibilities quite alluring, and calculated rather to encourage its cultivation than its ruthless destruction.

In his report the Brisbane chemist gives a number of uses in which the prickly-pear may be put. Among them he names alcohol, tea, showing that seven gallons could be secured from a ton of prickly-pear; feed cake for stock feeding; strawboard and paper; and pulp, which may be pressed by hydraulic force into household articles, such as cloth, etc. Prickly-pear also contains much saccharine matter which makes an excellent sugar.

The most practical use yet found for the prickly-pear of the southern portion of the United States has been for stock feeding. The Department of Agriculture is studying the employment of a planter's torch to scorch off the spines; when this is done it makes such an excellent food for cattle that they may be sustained on it alone, without other food or water, for many months through a dry season.

Considerate Censorship

"Does your father know I have you?"
"No. Papa isn't very well, and we're kept it from him."

Travel in Mesopotamia

The carriage jostles the caravan along the Mesopotamian roads. Isamnah as Bagdad is the most important trade centre in the Mesopotamian valley, there is at all times a large number of merchants and traders passing between that city and the surrounding regions. The Mesopotamian pilgrims who come from many lands to worship in the holy cities of Kerebla and Nejd make up the great majority of visitors to Bagdad, and their number is said to be nearly 50,000 yearly. Pilgrims from India reach Bagdad by river steamer from Bassora and proceed in carriages to Kerebla and Nejd, while those who arrive from North Russia and Persia come on horseback. In sedan chairs, in double baskets fastened to a mule's back, or on foot.

The road between Khanikin and Nejd through Bagdad is the busiest of all. Two meets in a day's travel dozens of caravans, each numbering from 75 to 100 or more camels, led by a gamely bedecked animal carrying on its back an embroidered flag of many colors. There are hundreds of pack mules and tiny, quick-stepping donkeys loaded down with merchandise of diverse varieties. The latter beast of burden is really the Mesopotamian "express and fast mail." The wagons are of one kind—a clumsily built creation of the vagabond pattern. They are manufactured in Bagdad and sold at about \$100, but are both heavy and uncomfortable. The top is built of wood and the sides have wooden shutters in place of curtains. They have seating capacity for eight passengers, but frequently as many as twelve persons will criss-cross into one carriage. The seats have no cushions, which is well from a sanitary point of view. The running gear of the carriages bear no sign of paint, but all have curious objects painted on the floor and sometimes inside to keep off the "evil eye."

GOOD ALL THE YEAR ROUND

Advantages of Being a Coal Miner

PITMEN have just been compiled from the payrolls of some of the anthracite coal-mining companies, showing the earnings of typical contract miners since the November panic. These figures indicate that the anthracite mine workers have fared better during the business depression than almost all other classes of labor.

At one of the large collieries in the northeastern part of Pennsylvania, not far from Wilkes-Barre, the net earnings of sixty efficient miners were computed; the table shows that each of the sixty earned, on the average, \$4.44 for each working day. Several of them earned more than \$100 a month for the three months considered. At another colliery there were six miners who earned, respectively, \$1.03, \$0.14, \$0.32, \$0.75, \$8.00, and \$9.15 a day. The record of eighteen capable men at still another mine shows average daily earnings of \$4.27.

There is considerable variation among individuals, because, as the Anthracite Coal Strike Commission said in its report, "experience, natural capacity, aptitude for the work, individual industry, and habits of sobriety materially affect the amount that is earned."

Under the award of the Strike Commission, now in force, the minimum rate at which miners are paid must remain fixed, regardless of business depression or any other circumstances. Their earnings rise, however, with the rise in the price of coal, in accordance with the "sliding scale" established by the commission. With every advance of five cents above \$1.50 per ton in the selling price of the domestic, or larger sizes, at the water, the mine workers' pay is increased one per cent. It happens, owing to the market conditions, that April is the only month in the year during which the minimum wage prevails.

Comparison between the figures gathered by the Strike Commission of 1902 and today's figures shows how the cost of labor in mining has increased in the last five years. The commission's report included a table which gave the annual earnings of the employees who work throughout the year for one company. There were ten contract miners in the list who earned over \$1000 each that year.

In a list of sixty miners, working in one colliery of the same company this year, there are thirty-six who earned at the rate of more than \$1000 a year during the three months ending with January. At this colliery there is employed only a very small proportion of the total number of miners employed by the company.

The absence of labor disturbances in the anthracite region is undoubtedly due, to a large degree, to the increased and steady earnings. This condition is reflected in the record of the Conciliation Board, which has had little to keep it busy for the last year.

Why She Made the Discovery

Mrs. MYLLE. "I've found out where my husband spends his evenings."

Mrs. DOWLE. "Where?"

Mrs. MYLLE. "At home. You see, I had to stay in my own last night."

The Slippery Pronoun

MANY are the circumlocutions which have been devised by civilized races in order to avoid the bluntness of direct address. In fact, it may be said that at the moment at which a nation standardizes its language it begins to have trouble with its pronouns.

"Thou" has, of course, become obsolete, except in prayer, although it flourishes colloquially in the north of England. The second person plural is substituted. In parts of the south "you-all" is heard, a further step toward refined classicism.

In France and Germany "you" has been retained in familiar or semi-impertinent speech. In Spain and Italy, on the other hand, the third person is substituted habitually in place of it.

WHAT THE SONS ARE DOING

Copyright, 1907, by Clarendon

THEODORE ROOSEVELT, JR. (ON THE RIGHT), AND CAPTAIN FIFE HUGH LEE, U. S. A. (ON THE LEFT), IN "ARMY BALLROOM NO. 10," IN WHICH THE PRESIDENT'S SON RECENTLY DINED FROM WASHINGTON TO DELAWARE CITY, DEL., 80 MILES IN 3 HOURS

PRINCE EDWARD, THE ELDEST SON OF THE PRINCE OF WALES, ON HIS WAY HOME FROM THE ROYAL NAVAL COLLEGE AT OSBORNE, PORT. A BRIEF HOLIDAY AT HOME. PRINCE IS 18 AND IS FOURTEEN YEARS OLD, AND IS FOLLOWING HIS FATHER'S FOOTSTEPS IN THE NAVY

New Clothes from Old

WHAT would be the feelings of the mill-maire, clothed in an expensive suit just made for him by a fashionable tailor, could he know that this same attire is composed largely of the rag debris which covered the back of the tramp who once begged a meal at his back yard?

Yet, outside the housepans of the South, and the imported tweeds made by the Harris Islanders, there is practically no piece of cloth manufactured which is not at least one-fifth shoddy, that is to say, composed of old rags which have been shredded in the "devil," as the machine which performs this office is known, rasped, and blended with new yarn.

This is not due to the dishonesty of manufacturers of cloth, but because the amount of wool which is produced annually is not enough to go round. A real suit of wool is practically indestructible. Even in the early days of the nineteenth century good broadcloth cost \$6 a yard; and fathers of respectable families would have two suits, one for working, and one for Sundays, which lasted them during the greater period of their natural lives. About the middle of the century, when the world's population began to increase at a rate previously unknown, the wool supplies fell dangerously short, and certain Yorkshire manufacturers set themselves the task of extracting the woolen yarn from rags. After long and expensive efforts they succeeded in this undertaking. The discovery of a means of extracting the wool revolutionized the clothing industry. It made cheap suits possible. It brought the sewing-machine into existence. It broke down the disastrous business of the "old clothes men," who had grown rich by hawking the discarded wool garments of the rich among their poor clients.

The shoddy industry now gives employment to thousands of hands, and has brought wealth and prosperity into many districts of the cloth-manufacturing countries. There is a world-wide trade in rags, which are collected at various points and shipped mostly to Dusseldorf, an England, where millions have been invested in this trade. Old suits,

stockings, underwear, gloves, carpets, and blankets all go into the "devil," to emerge as wool yarn, afterward to be blended with the millionaire's new suiting. "Shoddy" means waste, but nothing is wasted in the "devil's" maw. Besides new wool a valuable oil is extracted, as well as presinate of potash; while flock for bedding and upholstery is made from the residue. There is a more valuable kind of shoddy made from hard rags, tailors' clippings and strips, old tweeds, and friezes. This article is known as "suings."

The Supply of Turpentine

WITHIN a few years the turpentine problem will come to the front. While the supply of this commodity is never likely to fail, an inevitable increase in price will go hand in hand with the depletion of the pine forests.

Turpentine can be distilled from all the pines; but the chief source is the pine barrens of the Southern States, extending from North Carolina to the swamps of Florida. Already the best sections of pine lands have been worked out, and the distillers, creeping mile by mile down the coast in search of fresh supplies, are working on the last frontier—the barrens of the swayed Florida peninsula.

The turpentine camp is, like the oyster grounds, the scene of much cruelty and hardship. Many camps are worked by the labor of convicts, leased out to the contractors by their State governments. These men are housed in strong stockades, on the four towers of which guards sit with loaded rifles. The free camps are recruited in the main by negroes from the coast ports. When a man is "wanted" for any crime, he generally strikes inland for the nearest turpentine camp, where, owing to the shortage of labor, he is sure of a friendly reception.

When the "distiller" or mounted advance agent of the company has located a suitable site for a camp, the stockade is erected, or a row of cabins for the free laborers. The giant skill of copper is set up, and day and night the work is kept in operation until the turpentine has been extracted from the trees. To obtain the sap these are scored with an instrument specially devised for this purpose, and the sap, trickling down into a receptacle, steadily exudes rates, leaving behind a gummy substance which is subsequently scraped away, put into barrels, and carried to the distillery. There it is converted into turpentine, resin, and rosin. The resin adheres to the sides of the vat, and the turpentine is drawn off into a barrel. The turpentine, rising to the surface of the water, is then drawn off into a second barrel, after which it is ready for sale.

King Edward's Almsgiving

THE annual distribution of the royal bounty, in the form of Maundy money, has just been made with picturesque ceremonies in Westminster Abbey. Sixty-seven old men and an equal number of women were the recipients.

Every year for several hundreds of years Maundy money has been distributed by the English sovereigns to as many old men and women, separately, as there are years to his age. Thus on the last occasion of Queen Victoria's benevolence eighty-one persons of either sex received this alms.

A long procession marched along the Abbey choir, including the Lord High Almoner, the Dean, the children of the Chapel Royal, the Abbey choir, and the Royal Almoner, the secretary of the Almoner and his assistant, girl with towels, as well as the Yeomen of the Guard.

Each man received, in all, \$25, and each woman \$22.50. These sums included the Maundy coin, sixty-seven pence in specially minted money, two-pence, three-pence, and four-pence pieces. These coins were eagerly sought after by collectors, and bought up at many times their value.

Three other bounties had been previously given. They were the minor bounty, the discretionary bounty, and the royal gift alms, and they were doled out at the Royal Almoner to one thousand aged and deserving subjects of the king.

The Story of Rum

"The chief fueling they make on the island is Rum-bullion, alias Kill-Devil," says an old description of Barbados, written in 1635, "and this is made of sugar cane distilled, a hot, hellish, and terrible liquor."

This is one of our earliest authorities on rum, whose potent powers led to the extension of its name to cover all spirituous intoxicants. The rise and fall of rum is uncollected in the story of alcoholic beverages. It was Admiral Vernon, of the British navy, "Old Groggum," as he was called, in allusion to his coat, who introduced among the sailors the daily ration of rum-bullion that is still issued to the English army. "Rum-bullion" was shortened to "rum," and the word "grog" still commemorates the history of "Old Groggum."

Rum rapidly became the popular beverage of the world. It was the special favorite of the New England tars, and cargo after cargo was shipped to Africa to be exchanged for slaves. In fact, it is only of recent years that the cheaper "trade gin" has supplanted it. All Dickens's sailors and riverside characters drink rum—Quip, for whom Little Nell mixed it with terror; and Captain Cuttle, for whom Florence poured out a perfect drink. About the middle of the nineteenth century rum began slowly to decline before the advances of Scotch and Irish whiskey in England, and the seductive applejack of New England. The substitution of the sugar beet for cane dealt it a powerful blow, although it still remains the chief beverage in the West Indies, Guiana, and sugar-cane countries.

But the day of rum is over. The majestic rum-bullion first became familiarized as rum, and then fell into contempt. The name is already a Prohibitionist epithet; soon it will have become nothing but a memory.

Shields for Modern Warriors

Recent experiments at Sheffield, England, suggest the possibility that in this century shields may once more form an important part of the equipment of an army. Steel shields, three millimeters in thickness, and about 180 square inches in area, have been devised, which afford complete protection against bullets fired from the service rifle at a range of 400 yards. The small size of the shield, which weighs only seven pounds, requires that the soldier shall lie prone on the ground in order to be sheltered. Each shield has a loophole for the rifle, and slugs at the sides, so that a series of them can be linked into a continuous screen. The idea is that by the use of such shields the necessity of digging trenches may be avoided.

Drawbacks of Widowhood in India

The Indian papers record a curious case arising out of the terrible custom of infant marriage in that country. The daughter of Mr. Justice Moskerjee, a learned Hindu, was married when she was under ten years of age, and she became a widow two months after the ceremony. Though he could not repudiate the early marriage custom sanctioned by his creed, the judge stood out against that other custom which condemns the child-widow to life-long misery in her dead husband's family, and he determined to have her married again. The husband's relatives claimed and obtained a power of guardianship over her child, but before it could be exercised the second marriage had taken place, and there is to be a legal struggle to determine precisely how the claims of the dead husband's family can be reconciled with the living husband's rights. The judge's action will have the support of many Hindus who are eager to break down a custom that condemns thousands of young girls to a life that is almost worse than slavery. But the power of the older schools of thought is great, and British lawmakers and administrators, though deploring the evils of infant marriage, must shrink from interference with customs which claim to have religious sanction.

AT THE FOLLOWING KEELEY INSTITUTES:

"Better than
THE SPOILERS"

THE BARRIER

FIRST of all, this new novel by Rex Beach is a big, buoyant, bracing story of the last frontier—Alaska—a story to equal "The Spoilers" in every way. This is one half of **THE BARRIER**. The other half is its triumphant love drama. In this the new book surpasses "The Spoilers."

By
REX BEACH

Author of
THE SPOILERS

In **THE BARRIER** there is a new setting, too, but still in the virile air of the North. The new people whom Mr. Beach makes live before you in the clean-cut pages of **THE BARRIER** are intensely human. More than one of them will become celebrities in fiction.

THE STORY? In the opening chapter of **THE BARRIER** the reader scents a mystery and is on the eve of a love affair. Old man Gale, a trader at Flambeau on the Yukon, the father of three children mothered by an Indian squaw, brings the story on with a rush. His daughter, Necia, a beautiful girl of eighteen, is **THE BARRIER'S** heroine. Necia falls in love with and is loved by Lieutenant Burrell, a young Kentuckian, arrived with a handful of men at the post to act as mounted police. From this critical moment there is not a dull page to the end. Some quaintly humorous characters are introduced also. In fact, the humor of **THE BARRIER** is another feature in which it surpasses "The Spoilers."

The New Low Cost Policy

OF

The Prudential

is the Greatest Triumph in Life Insurance!

This is the Policy the People Want!

After eight months of unparalleled success, read what our Enthusiastic Field Managers say.

These are selected from hundreds of letters.

"The Policy sells—and it satisfies."

—James Perry, New York City.

"It meets all competition. The demand is constantly growing in favor of absolute guarantees rather than estimates and uncertainties."

—J. S. Cranston, Boston, Mass.

"Growing demand for lowest-price Life Insurance. Prudential representatives have a distinctive advantage over competitors."

—Henry Wertimer, Buffalo, N. Y.

"The Prudential agent is to-day invincible, and is envied by representatives of all companies."

—R. J. Mix, New York City.

"It enables a man to carry a large policy for a small premium."

—John C. Wright, Rochester, N. Y.

"We have what the public want. Recently wrote two applications \$50,000 each. Eight companies had been soliciting, but business came to us unsolicited."

—C. C. Cornett, Detroit, Mich.

"New Policy is what the people want."

—Piper & Fockl, Pittsburgh, Pa.

"For definite figures, fixed and unchangeable, no company has met the demand more completely than has The Prudential with its magnificent New Policy."

—Furlow & Avery, Louisville, Ky.

"New Prudential Policy best contract issued by any company."

—J. R. Tapia, Mobile, Ala.

"The business of my agency this year has increased more than 100%."

—J. W. Wilson, Cleveland, O.

"Our record for first TWO months of 1908 exceeds first six months of 1907."

—L. C. Newman, Providence, R. I.

"We are on the ground with the proper goods and the proper prices."

—Jes. Herzberg, Milwaukee, Wis.

"New Low Cost Policy speaks for itself. A stipulated sum for a stipulated commodity. No 'promise to pay,' but a 'guarantee to pay!' No estimates or guesses, but FACTS."

—A. C. Crowder, Jackson, Miss.

"New Policy appeals to smart merchant. He buys it as he would merchandise, knowing net cost from the start."

—Louis Wink, Cincinnati, O.

"New Low Cost Prudential Policy is the standard. We represent the best."

—O. O. Orr, Denver, Col.

"It is poor business to pay a high premium for privilege of getting a small percentage of cost back. It is best to begin with a net premium as provided in The Prudential New Low Cost Policy."

—J. B. Anderson, Zanesville, O.

"New Policy is the most business-like proposition in Life Insurance."

—E. L. Briggs, Toledo, O.

"Public clearly understands the liberal guaranteed contract. Most insurance for least money."

—H. R. Gould, Omaha, Neb.

"That the cost has been reduced appeals directly to the intelligence and common-sense of the people."

—C. H. Johnston, Des Moines, Ia.

"New Policy a strong card. In competitive cases have written every one against entire field."

—B. H. Timberlake, Minneapolis, Minn.

PRICE 10 CENTS

This Is the First Public Library To Install a Pianola Piano

and a Free Library of Pianola Rolls

DR. MELVIL DEWEY, at the time he was New York State Librarian, made a startling prophecy in one of his public addresses.

He predicted that the day was not far distant when all libraries which aim to be completely equipped would have large collections of Pianola rolls *to be loaned as freely and unhesitatingly as books.*

"Why should not the public borrow songs of Schubert as well as songs of Tennyson?" asked Dr. Dewey.

The Evanston, Ill., Public Library has put Dr. Dewey's idea into practical operation. A Weber Pianola Piano and a collection of 500 carefully selected music-rolls are now at the service of Evanston residents. Those who own Pianolas can take the rolls home, while others can play them in the library's music-room.

It is an impressive thought that lies back of this innovation, and this is the thought:

The Pianola has taken Music out of the class of the so-called ACCOMPLISHMENTS — has made it the universal possession of the MANY, rather than an exclusive art to be enjoyed by the privileged few.

It is a noteworthy fact that it is *always* the Pianola that is selected by those who buy with a full knowledge of the comparative merits of the different Piano-players. The Pianola is the first instrument of the kind to be purchased for a public library, just as it was the first instrument to be installed in a college. To-day there are over 100 leading educational institutions that are using the Aeolian Company's instruments in their musical courses.

Musically and mechanically, the Pianola is universally recognized as standing at the head of its class, a fact amply proven by its great sale, exceeding that of all other Piano-players combined.

COMMENT

The Meeting of the Governors

AS THE WEEKLY goes to press, the Governors are gathering in Washington in response to the President's invitation, to spend three days, beginning May 13, in considering and discussing with him, with one another, and with other eminent citizens, some matters of great national importance but outside of party politics, on which it is important that there should be co-operation between the authorities of the various States. The programme, so far as it has been divulged, includes a series of addresses by eminent authorities on subjects relating to the physical resources of the country and their conservation, the control of disease in both men and cattle, and such problems as divorce and transportation. We find Mr. CARBONATE cast for a discourse on ores and related minerals, Mr. JAMES J. HILL for a talk on railway extension and waterway development, Mr. JOHN MITCHELL and others for talks about coal mining and so on. Forty-one Governors out of the forty-five accepted the President's invitation. It is very interesting that they should meet in this fashion. To be sure, we must not expect too great results from their coming together. All winter long, and every year since the government started, the authorized representatives of the States have met in Congress, thereby bringing the States into close and familiar relations in the manner prescribed by the Constitution. So the States are not strangers to one another. But whereas Congress is the authorized contrivance by which they agree on Federal legislation, this meeting of the Governors seems intended to help them to a co-operative understanding about matters still under State control; and whatever helps to get the States together, so that, each for itself, they will promote objects which are important to the common welfare, is certainly commendable. At any rate, it is long since there has been so interesting a May meeting as this one that is gathering as we write, and we hope there will result from it much diffusion of sound knowledge and a quickening of the impulse towards wise and friendly co-operation.

Property Rights in Texas

Replying to some observations in the WEEKLY upon the apparently uncertain state of property rights in Texas, our good friend the Houston (Texas) Chronicle offers its assurance "that Texas is to-day more strongly individualistic, less socialistic, than any other State in the Union, and that in no other State are property rights held more sacred than in Texas." But speaking through the mouth of a faithless colored, employed, possibly, to express—thoughts that a Texas newspaper may not confess to with inquisitive, it admits, or at least conveys at the admission, that the State, annoyed

by the failure of the railroads to meet expectations, has of late oppressed them, and that some of its railroad laws "are absolutely lumenous and venacious." What looks heretofore like an invasion of the property rights of railroad owners in Texas it finds to be "only an excessively zealous attempt to protect the property rights of the citizens of Texas against invasion by or in the interest of the owners of the railroads." So be it; but in spite of its assurance as to the sacredness of property rights in Texas, the Chronicle seems to us not yet able to offer outside investors much inducement for the acquisition or creation of new railroad property in that State. The attitude of Texas to its railroads at present looks to us very like the attitude of a trapper to something that cannot get away. It is not an attitude that attracts such investors as are not yet caught.

Bryan Wins in Massachusetts

The Democrats of Massachusetts, in convention in Boston on May 7, elected by a vote of 408 to 152 a ticket of delegates at large and alternates who will go to Denver under instructions to vote for Mr. Bryan. They also adopted a platform. The BRYAN wing of the party had the votes in the convention, but how will it be as to the votes in the State? Bryan can never carry Massachusetts. It might be possible to find a Democratic candidate who could, but in that endeavor the Massachusetts delegates seem unlikely to give much help.

The Case of Reid vs. the United States

An interesting case has recently been argued before the United States Circuit Court for the Southern District of New York. One W. W. REID, dismissed from the army, together with the rest of C Company, Twenty-sixth Infantry, colored, by order of the President and without trial, on November 16, 1898, has brought suit to recover from the United States the pay which, had he been allowed to remain in the service, he would have received between the above date and July 18, 1907, the date of the expiration of his term of enlistment. Counsel for the plaintiff have submitted that his relation, as a soldier, with the United States was contractual and therefore not to be terminated by fiat of the Executive, but by due process of law (in this particular case by court martial), and the United States District Attorney has replied that his relation was merely one similar to that of any civil employee of the government. Probably the United States' contention is correct. However, the real question seems to be, Which branch of the government, the executive or the legislative, has power to dismiss soldiers without trial? Article II., Section 2, of the Constitution says:

The President shall be commander-in-chief of the Army and Navy of the United States.

And Article I., Section 8, says:

The Congress shall have power . . . to make rules for the government and regulation of the land and naval forces.

Manifestly the power here granted to Congress is limited by the power without which the President cannot be *de facto* commander-in-chief. This is to say, when the Constitution made the President commander-in-chief it must have invested him with the power which inheres—or better, with the powers which inhere—in one of that rank. The commander-in-chief must have been given some powers of regulation. Was the power to dismiss without trial one of them? Fortunately there is little likelihood of its being necessary to answer this very difficult question, as the District Attorney has offered the court in the revised statutes and the army regulations proof that seems to be convincing that Congress, even if it originally possessed the disputed power, has this long time since delegated it to the President.

Jackson Harmon for Governor of Ohio

In nominating JESSE HARMON for Governor the Democrats of Ohio have put up the strongest man they had, and one of the strongest Democrats in the country. There is nothing about this demonstration of Ohio's confidence in Mr. HARMON that need hinder the delegates at Denver from drafting him if their deliberations—if they are permitted to deliberate—should bring them to the conclusion that he is the best man to head their ticket. If left where he is, he will make a very formidable opponent for whoever runs against him in Ohio.

The Veterans Abandoned to Tormentors

The House of Representatives has reinserted into the sundry civil appropriation bill a clause the original introduction of which therein a year ago necessitated an abolition of the contents maintained at the national old soldiers' homes. This reinsertion should be attributed to fear of an ignorant and intolerant constituency rather than to expectation that it will have beneficial consequences. For Congress is aware that the abolition of the contents at the homes has resulted there, as it has at the army posts, in a great increase in alcoholism and resulting mischiefs. Recently we commented upon the extent and manner of this increase. It remains to be asked why any one, even if State prohibition laws were so far enforced and human habit so far mutable as to render it possible, should endeavor to metamorphose veterans of threescore and ten into total abstemious? It is seldom to the advantage of elderly men to change their habits, provided their habits are anyway reasonable. There are good reasons why drunkards should be discouraged in the soldiers' homes, but no good reason at all for attempting to shut off their medium of beer from old men who have long been accustomed to some use of stimulants. The reformers who have made this attempt have been cruel, and the Congressmen who have yielded to them have been cowardly. Nothing but harm, moral and physical, is likely to come of such action.

And Still the Wonder Grows

Then, one by one, the counties began to turn out the liquor traffic. Bourbon went partly "dry." Now, after twenty months of local option, ninety-three counties are wholly "dry," and only four—Macle, Jefferson, Kenton, and Campbell—still remain "wet," as before the passage of the law.—*Harper's Weekly.*

In the face of the above information about Kentucky, the mystery that surrounds to be solved is, What are the Kentuckians drinking, and how and where do they get it? The laws of a State may be changed in a year, but hardly the habits of a people.

Stock Gambling and Apple Gambling

The *erubite* editor of HARPER'S WEEKLY has proved, to his own satisfaction, at least, that stock gambling is essential to the legitimate trade of this country. The Detroit *Acra* suggests that he go one step further and "advocate a government bureau for the promotion of the bucket-shop industry and the encouragement of firms."—*Springfield (Miss.) Gazette.*

Be thankful, both of you, that however essential "stock gambling" may be to trade, neither of you, nor any other individual, is under moral obligation to undertake it. Keep out of it. Keep out of apple gambling too; for we notice that one of the great apple gamblers has lately failed. For a long time, the paper said, he had been a notable buyer of apples at wholesale, buying extensively in the fall, we suppose, with expectation of selling at a higher price in the winter. But this year the market must have dropped from under him, for he has failed. You see, he took his chance in apples, and lost. It was his business to gamble in apples—a risky business, for apples don't keep very well. By pursuing that vocation he helped to make the market for apples in the fall. According to your understanding of it that must have been wrong, and nobody should buy more apples than he can pay cash for at the moment, or sell more than he has in stock at the time. Would you go farther and say that no one should buy more apples than he can eat? That would be safer. But, anyhow, what is wrong in stock trading is also wrong in apple trading, and trading, or the trade in books; and if anything is right in apple dealing it is right in stock dealing too. There is nothing intrinsically wicked in a stock certificate as an object of purchase or sale.

The "World's" Anniversary

Sunday, May 10, was the twenty-fifth anniversary of the publication of the New York *World* by JESSE FLETCHER. The *World* celebrated its anniversary by burning fireworks on its roof and entertaining a large and distinguished company on the evening of May 9, and by publishing its biography the same night in a remarkably profuse and glorious anniversary Sunday issue. The *World* has come to be prosperous and influential beyond any other newspaper that we know of. It lately doubled its building. It has doubled its circulation repeatedly, and may do it again. Its owner and

editor is doubtless the most powerful representative of his profession now alive. The record of what he has accomplished in the last twenty-five years in the face of extraordinary and peculiar difficulties has hardly been matched in the history of journalism.

Old-age Pensions in England

The reception of Premier ASQUITH's plan for old-age pensions shows how difficult it is for a great nation in modern times to undertake the paternalistic care of its superannuated citizens. According to the budget, £20,000,000 would provide a pension of \$1.25 weekly to every person in Britain, excluding criminals, lunatics, and paupers. The number of pensioners, it is estimated, would not include over half a million people, for no one with an income of more than ten shillings a week is to be admissible. The *Spectator* stimulates this as "A plan to discourage the working classes from making adequate provision for old age," and points out various flaws in the bill. For instance, the man whose income is \$2.50 receives a pension, the one who earns \$2.75 does not; married couples, moreover, receive only seven shillings instead of ten, thus putting a premium on illegitimate unions. But these are minor considerations. The point is, the pension fund must come from somewhere, and a higher tariff seems therefore inevitable. In Germany, France, and Belgium the beneficiary as well as his employer contributes toward the fund, thus making the pension a kind of insurance benefit. Only a year ago Mr. ASQUITH believed in a similar scheme for England. His change of front cannot now be explained. It does not seem likely that so solid and level-headed a man as Mr. ASQUITH would act, as the *Daily Mail* hints, on the principle of "After me the Deluge."

The Blood of Bullfrogs Would Protest

We have it on the authority of the Atlanta *Constitution* that the citizens of Russell, Georgia, the early home of President ROOSEVELT's mother, have sent a signed request to the President, "that he stand for re-election, regardless of the third-term precedent or any other inimical influence." How comes it that Russell, however moved by considerations of sentiment, is able to overlook an influence so inherently inimical to a third term in this instance as Mr. ROOSEVELT's letter? Does Russell think that the blood of the BULLFROGS would continue to course unimpededly in Mr. ROOSEVELT's circulation if he stood again for office in the face of that letter? No, no; Russell, you do injustice to the BULLFROG stock.

Money-making Corrupts Sport

Cardinal LEBLANC is quoted as saying that horse-racing with betting eliminated is a legitimate sport, and that one effect of betting has on racing is to destroy an innocent pastime. The cardinal seems to be a practical man. The race-track gentlemen claim to be still more practical. They tell us that racing cannot flourish unless race-track betting is allowed, which is as much as to say that innocence is incompatible with health in horse-racing. It may be argued that Governor HUGHES is the best friend horse-racing has got, because he is trying to divorce it from betting, which, according to the cardinal, tends to destroy it. We incline to think that not so much betting per se is the trouble with horse-racing hereabouts as money-making. The root of all evil is the root of this one. Conceding, what experience teaches, that wherever horses race men will bet on them, it is still conceivable that horse-racing could be maintained successfully in this neighborhood if it were conducted solely as a sport, and not as a money-making enterprise. Money-making has corrupted even the intercollegiate contests. It tends to corrupt any sport it gets a hold on.

An Innovation in Electioneering

It is announced that the Countess of Warwick, one of the most energetic of English Socialists, will make twelve speeches in the Eighth Congressional District of Ohio next fall in support of C. E. WHARTON, a Socialist candidate for Congress. It will be good sport for the countess and a very interesting experience for the voters of the Eighth District, but as a precedent it will get attention, and doubtless be discussed. Is there objection to an alien taking part in a political campaign in our country? We don't let foreigners vote until they have been duly naturalized; how is it about letting them solicit

votes? We might, at least, demand that they take out a license, but on the whole that does not seem so yet expedient. The better course is to welcome any open electioneering that helps to make the voters think, and feel an active and intelligent interest in the issues under discussion. No matter what the countess says, if she makes the Ohio voters think, it will certainly be to their advantage. If she teaches heretical doctrines, there will be speakers enough to controvert her.

Not Such a Bad-looking Town

For decades past the European traveller has been disparaging New York. The city was an agglomeration of ugliness, the tall buildings were monstrosities upon the face of nature, and the skyline was a thing so hideous that the artistic soul shuddered at sight of it. But changes are doubtless in the spirit of inspection, induced in part, no doubt, by improvement in the show. A writer in the *London Spectator*, for example, tells England that "the very disadvantages of New York are also its supreme beauties." What other city is there of like size which matches it in position? "It is a seaside city. The salt water laves its feet. As the traveller approaches it he thinks of Venice rising from the sea, or he is perhaps reminded of ancient Tyre, which stood out in the sea as a land from a wreck, and of which the houses were impressively tall." All of these beauties and advantages have been for years obscured by the humors of foreign travellers, but now the mists seem to be clearing.

A Few Truths for a Seeker

Our local contemporary the *Truth-Seeker* says:

In giving both sides of the argument against the use of alcohol, HARPER'S WEEKLY points out, as has often been done before, that the dominant races of men, the most civilized countries, are addicted to rum. The Scotch are strongly given to whiskey. So are the English, Germans, Scandinavians, and Russians, each to their favorite stimulant. The Turks, the Arabs, and the Hindus don't drink. MUHAMMAD proscribed alcoholic beverages. Jesus did not. It will be noted that the rum drinkers are Christians. The questions arise whether they drink rum because they are Christians, or are Christians because they drink rum, and whether it was rum or religion that made them leaders in civilization. As much one as the other, we think.

They do not drink rum because they are Christians; neither are they Christians because they drink rum; neither are they Christians because they eat pork. MUHAMMAD prohibited pork, rum, and pictures, and permitted polygamy. Currier's aim was not to reach and regulate the spirit through the body, but to regulate the body through the spirit. The body may be orderly and governed in its appetites and yet contain an unregenerate spirit, but a regenerate spirit is bound to induce a disciplined and orderly body. So "conversion" that is thoroughgoing will cure the drink habit. Rums never made any people leaders in civilization. Religion is the greatest civilizing force that exists, but defective or corrupted religious ritual and limit the civilizations of the peoples they influence. Defective religions are now holding back most of Asia, and most of the Christian countries doubtless suffer more or less from corrupted Christianity. The rum question is important, but not nearly so vital as many people think. The true way to settle it is not to make the rum bad, or even excessively scarce, but to make the man good. That is the Christian way, and the only way that is permanently satisfactory. That was the method pursued by St. PATRICK and Father MATTHEW in driving the snakes out of Ireland, and it cannot be beaten. Legislation, if wise, can do something, however, and should be made to do what it can.

The Republican Candidates for the Presidency

A LARGE part of the May number of the *North American Review* is devoted to a consideration of the respective claims of eight Republican candidates for the Presidency. Representative BOSTELL, of Chicago, who handles the case of Speaker CANNON, insists that the Republicans, in selecting a nominee, must exact four qualifications: in wit, character, ability, attitude toward the policies of the BLOOMFIELD administration, and personal popularity. The nominee, of course, must be a man of approved integrity. He must have demonstrated his ability to perform the duties of the Presidential office and his possession of executive energy. He must be in sympathy with the present policies of the government. Finally, he must be a man of national repute, well known and

well liked by the people. Illinois will present to the convention the name of Speaker CANNON as the man who best fills all the requirements of a successful Presidential candidate. As for Mr. CANNON's personal popularity, that is attested by the fact that not only his friends but his acquaintances, and many that have never met him, call him "Uncle Joe." As for his political experience, that is demonstrated by the fact that his service in the House of Representatives, beginning, as it did, in 1873—thirty-five years ago—when GRANT was President and BLAINE Speaker, has brought him into contact for a generation with all branches of government, and with all the leading American statesmen of the time. As chairman for many years of the great Committee on Appropriations, he learned to their minutest details the revenues and expenditures of the government. In a word, Speaker CANNON knows, as perhaps no other man living knows, the country, the government, and the people. Mr. BOSTELL testifies that a strong supporter of another candidate said to him a few days ago, "Speaker CANNON is today the best equipped man in the country for the Presidency, and if he were only ten years younger, no other man would be mentioned in the convention." As to his age, Mr. BOSTELL points out that if Speaker CANNON should be elected President this year and be re-elected in 1912, he would at the end of his second term still be four years younger than CLEVELAND was when he made his last speech as Prime Minister in the House of Commons. The fact seems to him to dispose of the objection to Speaker CANNON on the score of age, and he submits that Speaker CANNON's wisdom and efficient co-operation with the President in obtaining from the House of Representatives favorable consideration of the important measures which Mr. BLOOMFIELD has recommended to Congress entitles him to the cordial support of all who feel that on "the steady administration of the laws" rests the security of property and the welfare of the people.

Mr. J. D. WHEELER invites us to contemplate Mr. GEORGE B. CORTLETT's phenomenal rise since 1881. He was private secretary to the Surveyor of the Post of New York. Early in 1883, while HARRISON was still President, he became secretary to the Fourth Assistant Postmaster-General in Washington. When CLEVELAND presently entered the White House, CORTLETT, who was then but thirty years of age, reported, as a Republican, to be dismissed, but made himself so useful that he was retained in office, and Postmaster-General HARRISON recommended him as stenographer to the President. This post, he kept until, under the McKinley administration, he became assistant secretary to the President, and, after the retirement of Mr. J. A. PORTER, he was appointed secretary. Soon after Mr. ROOSEVELT's election to the Presidency, he was made Secretary of the new Department of Commerce and Labor, and in the subsequent campaign of 1904 discharged with singular efficiency the duties of the chairmanship of the Republican National Committee. Early in March, 1905, he was made Postmaster-General, and soon afterwards was transferred to the Secretaryship of the Treasury, which he now holds. This certainly is a remarkable career, and one that heretofore seems certain to bear fruit. He is not an avowed candidate for the nomination for the Presidency, however, and he has never run before the people for a political office. For the present, therefore, we are doubtless justified in disregarding his candidacy.

Mr. ARTHUR C. HARRIS, of Indiana (formerly our minister to Austria), speaks for Vice-President FAIRBANKS, describing him as a statesman of the McKinley stamp, cool-headed but warm-hearted, discreet yet fearless, conservative but progressive, cautious but patriotic, holding above all other considerations the welfare of his country. Mr. HARRIS says he would make a safe President, while, at the same time, he would take no reactionary step with regard to those policies of McKinley and ROOSEVELT which have commanded the public confidence and the support of the Republican party.

Senator DICK, in maintaining the claims of his colleague to be the Republican standard-bearer, recalls what Speaker CANNON once said of him, namely, that of all the brilliant statesmen in American political history there is no older man or surer man, no better or finer fighter, no man who knows the State and nation more, or renders them better service, than Senator FORAKER of Ohio. It is pronounced indubitable that Mr. FORAKER would fill with honor and surpassing distinction the great office of President.

We observe next that Mr. FRANK H. STIMMONS bases the Presidential claims of Governor HUGHES on the latter's proven ability to carry a State which would have to be regarded as doubtful in the event of the nomination of any other Republican; and, secondly, on his record with regard to the economic questions which are now occupying the attention of the nation as a whole. This record discloses Governor HUGHES as committed to the rational regulation of corporations and the drastic punishment of real offenders against the law, but as deaf to any agitation which has its sole justification in popular clamor. In a word, the record of Governor HUGHES is written in existing and working laws, not in interviews nor in fruitless agitation.

Of Pennsylvania's candidate, it is asserted by Governor STANT that the principles of the ROOSEVELT policies are the principles of

Senator KNOX, for it was upon him as Attorney-General that President ROOSEVELT depended to give these policies the indisputable form of law, and, finally, to secure for them the approval of the Supreme Court of the United States. A man of judicial temperament, he has twice refused the offer of a seat on the United States Supreme bench, and when asked to give a reason for the declination, he declared, "I would rather make history than write it." Governor STANTON thinks that this one sentence is an index to the temper of the man.

Professor JOHN R. COMMONS, political economist of the University of Wisconsin, insists that what the American people need at this juncture is a leader who is a radical of radicals. He must believe with all the fervor of our fathers in equal opportunity for man, weak or strong, and for capital, big or little. Professor Commons goes so far as to assert that the right kind of leader for the present and prospective times must be one who understands that there can be no such thing as a "good" combination for the creation of a monopoly. He must also be a man of determination and aggressiveness, and of the resourcefulness that comes from a long experience in fighting for the reform of the awakened intelligence of the people demands. He must refuse compromise, and decline to occupy any middle ground. At the same time, he must have the sense of justice that is not moved by the spirit of retaliation. Senator LA FOLLETTE, according to his spokesmen, is that kind of leader.

Finally we note what Representative BROWN of Ohio has to urge in the interest of Secretary TAFT, to whom considerably more space is awarded than to any other of the eight candidates named. Mr. BROWN dwells upon the fact that TAFT would bring to the Presidency a practical administrative experience not surpassed, if equaled, by that of any of his predecessors. In the external relations of the country he has comprehensive knowledge of both national and international subjects would furnish a certainty of success of equity and of sustained prestige. To the problems of Greater America and our dependent colonies, and less advanced allies, Mr. BROWN avers that Secretary TAFT's genial humanity and familiar association with the outlying peoples of the earth would guarantee kindly and intelligent attention. At home, in dealing with the grave social and civil questions now pressing upon the body politic, his administration, we are told, "would be marked equally by conservatism and progressiveness. No honest enterprise need dread him; no dishonest scheme could hope to hide its face or escape punishment." In a word, with WILLIAM H. TAFT as President, the American people might rest tranquil in the knowledge that they had at the helm a statesman who, in peace or in war, would guide the destinies of the nation with a strong hand and with a gentle heart.

The Short Story

THE *Vulture* has recently spoken with great disrespect of the great short story, and one cannot but wonder if it is not indeed time to sound the note of warning, for the short story—the pride of American literature—fall into the class with the despised and rejected "best sellers"—the modern, cheap, flimsily built novel, if we do not pause to analyze its content and its structure, to note its great function and divide the sheep from the goats, we may soon find it going the way of the great indiscriminate.

There is a much mooted point as to whether America has yet begun to produce a literature. In poetry, surely, we cannot compete with our mother—England. Only the Whitmanites may contend that we have sang ours in a strong, natural, compelling voice—the rest are echoes. In the novel, Mr. HENRY JAMES alone stands up in the front rank. In the essay we point to WASHINGTON IRVING, HAWTHORNE (whose short stories were mostly essays), ERNEST THOMAS, as against the prosy, glittering array of Englishmen from AMUSEY and PATER. But in the short story we may challenge England to a competition. Who have they who constructed the short story as Poe did? who can they set beside THIER HARTZ for pathos, wit, insight, and color? Mr. JAMES's jeweled tales outbribe STEVENSON, and three follow Miss JEWETT, ALICE BROWN, and MARY WILKINS, who, whatever we think of her style and her obvious limitations, had the photographer's quick eye for striking detail. In the short story, indeed, we may turn to France for rivals and make our comparisons with MERIMEE, MAUPASSANT, BALZAC, and the king, le MAFFANSAVE.

"The great fault of this critic who does me the honor of judging me," writes le MAFFANSAVE in his famous preface, "is that he isn't a critic," and with that he goes on to point out that each thing must be judged in its kind, and not judged because it does not resemble something different. "The public is composed of numerous groups crying out: 'Ourselves me, amuse me, amuse me, touch me, make me dream, touch, shudder, weep, think. But the few (spirit says to the artist): 'Make something beautiful in the form that suits you, according to your personal temperament.'"

In the same spirit Mr. HENRY JAMES reiterates his, "Be faithful to the coloring of your own spirit."—Emphasize the personal note." Do not go to literature for more literature, but go inside of yourself and find out what kind of an impression this universe forming with life has made on the sensitive plate of your own consciousness. There is a kind of blamphing in discarding our personal vision and imitating whatever model. To reproduce a writer for his choice of subject, his natural diction, his brutal candor or laborious subtlety, his chosen wanderings in the dim and vague, or his sharp, precise, recording senses, is to reproach the Creator for lifting men above the level of sleep, who one and all poke their noses through the same hole in the hedge because the hell-wether did so first.

In reading a great number of magazine stories one emerges often feeling as if one had read over and over again the same thing with the slightest of changes in names, places, and general paraphernalia. There appears and reappears the precocious child story, the love complication, the domestic severity (of recent date) story, the slangy story, the dangerous adventure story, and the stories of friendship. But what one feels like calling out to the writers is: "Can't you be just a little different? Can't you see something all the others haven't seen?" It was FLAUBERT who said to le MAFFANSAVE in those famous counsels of perfection for authors: "Look at a tree until it appears to you just as it appears to every one else—the touch of nature that makes the whole world kin, he was striving for here—but he continued: "then look at it till you see what no man has ever seen before," and this is the demand for the decoration of the individual spirit. Let the short story teller learn to see and reproduce something beautiful as he sees it, according to his personal temperament, and we have a worthy poet. For literary craft is the power of re-creating of making a miniature of the bit of the world seen and felt, the power to re-create is talent, or genius, as the case may be, and that story is best which with strongest individuality creates the most beautiful illusion.

As to form, the easiest mistake, after that of fusing that only one kind of a half dozen kinds of matter fit into the short story, is to fancy that the main point is to hold the attention in suspense and spring a surprise, a *déroulement*, upon the unwary reader, on the last page. This is indeed a justifiable and dramatic method of structure and one which Poe, himself one of the great masters of slight structure, employed invariably.

But there is quite another method, and that is to stress arresting beauties all along the path of one's tale, and allow the reader to take his joy, not in a thrill at the end, but along the way-side, in the perfect paragraph, the velvet word, the passing picture, the connotative epithet. This is much more the method of Mr. JAMES and of STEVENSON.

If one were called upon suddenly to mention the three most expensively beautiful short stories in English one would undoubtedly say, first, Mr. JAMES's *The Altar of the Dead*; second, STEVENSON's *Wolf of the Hill*; and third, KIPPLING's *Without Benefit of Prayer*. In none of these three is there time, plot, dénouement, each one is so shot through with beauty, rarity, individuality, that it lives in the memory as a single, wonderful gem, seen once and never forgotten. From the opening phrase of *The Altar of the Dead*, "He had a mortal dislike, Poor Siranome, to lean anniversaries," to the last, "But alone with him in the dusky church a great dread was upon her of what might still happen, for his face had the whiteness of death," each phrase is shot through with distinction and individuality—no word is superfluous, no phrase is shaky. The story in itself concerns nothing more exciting than a middle-aged gentleman protesting against the universal fire, insisting that in a world where "all things move and nothing abides" he will at least build a altar to the dead, and so he endures "loyalties." He found a corner in an out of the way church where he might commemorate his dead, where he revisited and relit the old affections and lived with them, and here ultimately it comes about that through the ministrations of a kindred spirit he learns to forgive his one great enemy, among the dead, and the little rift in his explicit pity toward humankind is mended before his death.

If one turns to *Wolf of the Hill* one can but give the same reasons for finding it unexcelled. It is decorated from the first line to the last with beautiful images, beautiful thoughts, and line distinctions. The plain and the stars, the bridge over the river, the stream that ran down the valley turning across mills, the dream of the islands "where kings live all alone in great places with a sentry walking up and down before the door," the constant thought of the distant, unseen sea, "where the ships are that bring pearls and treasures from India"—these are pleasant and noble regions to while in. But if one seeks for action or *déroulement*, they are not there, one are the unities observed, since the tale covers the whole of Wolf's life, from the first touch of vagabondage and adventure, man's acquiescence in the thought that all there is to be in the quiet spirit, and all that is meant to preclude it will come to it, till the final visit in old age of the woe-herd, Death.

So in the end what one would wish to say is that that story

is good which is shot through with the author's personality, which gives us most fully and entirely his perception and emotion and his personal vision of the world. He may perceive a multitude of things, but until he transmits the perception into himself, impregnates them with individuality and significance, his story amounts to little.

Strong feeling, exciting plot, a sense for manner and structural ability, sometimes makes a good short story, but mainly the matter is one of able craftsmanship and individual perception. The short story is a small thing cunningly wrought. From the first line to the last it must be decorated, polished, highly concentrated, closely welded.

"If its own ardours fulness recovers."

In its perfection it would be to prose composition what the sonnet is to poetry.

Personal and Pertinent

TWO late Due de Chalmers belonged to the most dual of families, every adult member of the House of ALBERT being of that rank. The late Duke's mother is, of course, the Dowager Duchess de Chalmers; his only sister is Duchesse d'Uzes. His first cousin (the head of the family) is Duc de Luyne, his wife is a daughter of a Duc d'Ence, his eldest son is a Duc de Chervene, his only sister is Duchesse de Naxelles, and his mother is a daughter of a Duc de Donderville. The family is a painfully short-lived. FLORENCE, Duc de Luyne, died in 1854 at the age of thirty-one, leaving two sons, who died at twenty-three and twenty-one, respectively. The only son of PAUL, who just died at the age of thirty. The only son of CHARLES is living at the age of thirty-eight.

HERBERT ASQUITH, King EDWARD's new Premier, and Governor HUGHES have a great many points in common. Mr. ASQUITH has never been a popular man, and no one can call Governor HUGHES an idol of the people. The Premier was a very earnest and able student at Oxford, and the same is true of Governor HUGHES at Brown. Mr. ASQUITH was a fellow of his college, and Mr. HUGHES was for some time in his earlier life a teacher at Cornell. Both are lawyers, and both came into prominence after somewhat similar fashion. The Governor first became widely known by means of examinations during the AMERICAN Insurance investigations, and Mr. ASQUITH came into prominence when, in association with Sir CHARLES RUSSELL, he conducted the cross-examination of JOHN MACDONALD, member of the House, at the time of the PARLIAMENT Commission. So early was this cross-examination conducted that it attracted wide attention and won for Mr. ASQUITH the title of Q. C. As CHANCELLOR'S House Secretary, thereafter, his career somewhat resembled that of Mr. HUGHES as Governor.

A little stranger word excites a friendly interest among some of our Southern contemporaries; as thus:

HARPER'S WEEKLY called Mr. WATTSWORTH a "garrallique," and the word looks mightily like one of Mr. WATTSWORTH's own vocal chickens come home to roost.—*Asheville Telegram*.

"Garrallique," born of "garrulous" and "gallus," goes back to Somerlath on both sides of the family; mad, with such a genealogy and his own fairly ripe age taken together, it ought to satisfy the most exacting requirements of Huguistic good society. But let not "pleasant," similarly related to "plausible" and "pleasant," be overlooked. We have brought this equally apterivorous word into notice and feel responsible for it. "Garrallique" and "pleasant"—if the next dictionary-maker passes these by, let him be emphatic.—*Asheville Telegram*.

HARPER'S WEEKLY has coined the word "garrallique" and applies it to Colonel WATTSWORTH, explaining that it contains the idea of vivacity and easy motion. We agree with the Charlotte observer that the word is a good one, and we also predict it will spread.—*Meigsbury (Ark.) Advertiser*.

Correspondence

CAN BRYAN THINK STRAIGHT?

CHICAGO, ILL., May 21, 1908.

To the Editor of Harper's Weekly:

SIR,—Apologies of your editorial of May 9, "Can Bryan Think Straight?" may I say a word?

A little more than a year ago Mr. Bryan made a trip through the South, following the Bryan campaign at Chattanooga, Tennessee, at which John Temple Graves made his remarkable speech urging the nomination of Roosevelt by the Democrats, etc. The day following I had a little visit with Mr. Bryan, the visit being purely accidental and unbusinesslike of my side, and due to the chance of our having a mutual friend in Lincoln who stands very close to Mr. Bryan. It was my first time to see the great orator, I had read of and after him for years. I was anxious to form an estimate of the man. Frankly, after ten minutes with him, during which time others were talking, coming and going, the first thought to enter my mind was this: This man cannot think straight. He impressed me as being unbalanced in his judgment and erratic in his thought. I heard him but afterwards in an open-air meeting, in which he said a new thing, but merely repeated almost verbatim the social and economic views of Herbert Spencer. I heard him at night on "The Prince of Peace." Then I was more convinced

than ever that both as an orator and as a thinker Mr. Bryan had been overrated. He made some statements that no thinker and scientist would think of making. I say this as one deeply grounded in both the traditional and modern beliefs of the Bible and the old-fashioned religion as taught among Southern mountaineers for ages almost.

He appeared to us as having reached probably the fifth stage in the development of knowledge—namely, delusion—with a smattering of the sixth and seventh stages, which are judgment and reasoning. Hence our first conclusion was explained—viz., that Mr. Bryan is neither a straight nor an original thinker.

I merely give this for what it may be worth.

I am, sir,

NAMUEL H. THOMPSON.

MUCH DISTURBED

TAMPA, FLA., May 2, 1908.

To the Editor of Harper's Weekly:

SIR,—A singular event was recently reported, of doubtful significance to the dominant race in our country—the bold demand of educated Negroes for miscegenation of the white and African races. How dreadful this is, is fully realized when it is remembered that the popular action is, in only an ignorant Negro factors miscegenation. The exact opposite is more nearly true. On the other hand, "white trash" really reduce miscegenation. While the cultured white utterly abhors it, seeing its incalculable danger.

The thing to do is to distinguish between social equality and political equality—to prohibit miscegenation by Federal legislation; to limit public school education for both white and black races to simple "three R's" and thorough industrial training. The Negro deserves every political right that the white man has—but the one who means social equality between the races, in public discussion, should be whipped and imprisoned.

CLARENCE G. GATES.

Your remedies are too drastic for us. Negroes have a constitutional right to mention social equality between the races when and where they will. We are nothing dreadful about their enjoyment of the right of free speech on all subjects. They are not influential in a terrifying degree in these parts, however it may be in Tampa. Have you not been misled by sensational and false reports of a recent dinner in Brooklyn?—KATRON.

AN OTHERS SEE US

CHICAGO, O., May 4, 1908.

To the Editor of Harper's Weekly:

SIR,—Your notices in the current edition is ungenerous, indecent, slanderous. See page 1, 4-11.

And then your article on "Hate-Track Betting." Well, it is really advising (for a take-off) your State or city government to play the baby act and cry, "I can't."

But you chance to have a man, who is not so controlled by the course of the wind or by the sea. He believes in Nehemiah 13, 15-22. Follow a Bible and read that some day. It is interesting.

And then your discourse on the flum devil. Ha! The flum devil is perfectly satisfied with the discourse. In fact, the flum devil denied it, and HARPER'S WEEKLY (for the rum) says, "He too!"

It will say "Me too!" to anything—for a consideration.

The devil is at his best in consuming enormous quantities of wickedness into small bulk in the editorials of HARPER'S WEEKLY.

I am, sir,

JOHN W. MARCH.

To the Editor of Harper's Weekly:

SIR,—One of the many returns which reach me for subscription to your valued cosmopolitan paper is the correspondence corner in which the "... power the globe give us ..." surely lies lurking; but another return is the editorial corner. While its many comments are—some, sometimes—unpleasant as thought strikes—yet these in the issue of April 25, 1908, voices a humanity truth as unpalatable as humanity itself. (Humanity is earthly; beyond the earth is nothing human.) Your comment is worthy the most thoughtful consideration of every intelligent person, and ranks with any sermon from any pulpit. Given rightful, correct application, it will in mere to drive out ignorance and superstition, which still dominate the minds and actions of individuals and nations to a greater extent than any other existing force.

I am referring to the article "Evils who don't know what is wrong." The article, while aimed at disbelievers in fact, in person—yet it leaves deep an impression and leaves no life. As "a man's conscience may be all wrong yet should be respected," a devout regard to his part for the consciences of others should induce careful investigation of the basis of their thought and conduct, and such investigation would surely the possibilities for the things known on the "other side of the mountain." "A wrong is shown and everywhere a wrong" is a proverb quoted as an axiom in defense of opinion based on narrow and bigoted criticism on none. Your suggestive words on acts "legalized into wrong" are to the point and far reaching.

The facts of your statements are verified by the history of nations and incontrovertibly by those nations treating of religious wars induced by intolerance and that attitudes reinforced by ignorance.

I would that the article under criticism could be seen and read in every secular and religious publication.

I am, sir,

E. E. ASHLEY.

Finance

Some Events of Passing Interest

By HOWARD SCHENCK MOTT

ON the eighth of this month the government published its estimate of the acreage and condition of winter wheat as of May 1. The condition of 80 per cent, compares with 91.3 per cent, on April 1 of this year, 82.9 per cent, on May 1, 1907, and a ten-year average of 83.4 per cent. Until the crop report was published, the pessimistic expectations had indulged rather extravagant expectations of a condition percentage fully as high as that of a month previous, and there was talk of a winter wheat crop this year approximating 300,000,000 bushels. The estimate of a loss of over ten per cent, in condition, therefore, was the occasion of a sharp advance in the price of wheat, the daily option rising three cents a bushel before the close of business on the day of the publication of the crop report. In view of the fact that, while the estimate of condition was lower than on April 1, it was nevertheless 3.2 per cent, higher than the ten-year average for May 1, the advance in the price of wheat no doubt surprised many people. What is known, however, as the "statistical position" had been strong for several weeks previous. Visible supplies of the old crop had been decreasing materially and stocks of wheat the world over were low. At the present time the supplies of wheat in America and Europe are probably from 20,000,000 to 30,000,000 bushels less than at the corresponding time a year ago. The crop report showed a very interesting and encouraging feature in the estimate of average "winter-killed," the figures being only 1,318,000 acres against 2,533,000 acres last year. Of course the crop is by no means free from vicissitudes before harvest. In 1902, drought and cold weather late in May cut down expectations by about 100,000,000 bushels. In the early part of the present month warmer conditions were somewhat unfavorable in certain sections of the country, hindering both the growth of wheat and the planting of corn. The promise of the winter wheat harvest, according to the government report as of May 1, aggregates 451,000,000 bushels. bumper crops this year would not only hold both great promise for the country's business activities, but they seem to be almost a necessity precedent to recovery from depression.

"EASY MONEY"

The piling up of surplus funds that began in January continues unabated. Even the "spring planting demands" from the farmers do not appear to offset in any measurable degree the flow of money into the banks of the reserve centres. The banks at New York have been hard put to it to find profitable use for funds, and are reported to be seeking good commercial paper rather eagerly. A few millions of gold have crossed the Atlantic, but the incentive to export gold is not very great, because the accumulation of funds at both London and Paris continues large and discounts remain low. This world-wide plethora of funds furnishes a sharp contrast to the conditions of a year ago. It emphasizes the world-wide character of the financial disturbances which brought it about. It is significant, in the present situation, because it enables corporations to borrow much-needed new capital on easy terms, as has already been pointed out in these articles. As "tight money," last year, constituted one of the gravest dangers of the financial and business situation, so, this year, exceptionally "easy money" constitutes one of the surest foundations of recovery.

HIGHER FREIGHT RATES

The campaign for higher freight rates seems to have begun in earnest and already meets with opposition not only from shippers, but from railway men themselves. Not so very long ago neither shippers nor politicians could conceive that the railroads would have the temerity even to consider advancing rates, and both were clamoring for reductions. Last year the present situation would have been considered an anomaly, and it is an anomaly in some respects. The whole matter of the conduct of the business of transportation has become so involved in politics that it is difficult to forecast the outcome. Of course the shipper objects to no advance in rates, partly on general principles applicable at all times, and partly on the ground that slack traffic warrants lower, not higher rates. He has been used to keen competition for his business in previous periods of depression. In the view that the present is an inopportune time to advance rates the shipper apparently enjoys the support of a number of railway men, who believe that they can reduce operating expenses considerably within the next few months. But even the railway men who demand rates apparently large to advance rates later on. The fact that this is a Presidential year complicates the situation. It is reliably reported that the suggestion to advance rates as an alternative to reducing wages emanated from the White House. There exists much difference of opinion among experts as to the economic wisdom of an attempt to advance rates under present conditions. But heavy operating expenses make essential rate wage

reductions or an advance in rates. Regardless of the origin of the suggestion to advance rates, it is a fact beyond dispute that the cost of living has so far declined hardly at all, so that the balance weighs logically in the direction of higher freight rates.

ORIENTAL DEPRESSION

Purely personal troubles so absorb the mind that one's neighbor's troubles are not recognized or, if recognized, not remembered. Recently, however, an event occurred which for a moment diverted attention, because our neighbor's troubles have some relation to our own. The price of silver has declined to the lowest price in many years. The reasons for the decline consist of a cessation of buying for exchange purposes by the mint of India, a slackening demand from the Indian bankers because of the poor trade brought about by the famine in that country, and selling of silver exchange by Chinese banks which expect lower prices for the metal in consequence of decreased trade activity throughout the Orient. So far as the silver market itself is concerned, its chief support in the near future will come from the German government's new policy, which calls for the purchase of 10,000,000 ounces a year for the next five years. This policy is expected to absorb ten per cent, of the silver that comes on the open market. Germany has not been a buyer since it demonetized silver in 1860. The decline in silver, however, shows how intense has become Oriental depression. In a recent despatch from Tokio, the *Journal of Commerce* states that the transactions at the Tokio Clearing House on March 30 amounted to only 15,908,291 yen against 26,833,229 yen on the corresponding date in 1907, and that the Japanese government has seriously considered the securities markets by its offer to reissue the domestic war bonds on a basis which figures 8.80 per cent. A curious phase of the Japanese depression is contained in the statement that "the conditions are ascribed to the adoption of government measures without consulting the capitalists."

FALMOUTH TENDRIS FAIT

To return home, a matter of local importance has recently disturbed financial circles. Shortly after the suspension of a New York Stock Exchange house of plunging speculators, one of its members was reported to have stated, in defence of his own use of securities belonging to customers, and paid for in full by them, of which his firm was the custodian, that it was the general custom of Stock Exchange houses to use such securities for their own benefit whenever needed. He is said to have added: "It is wrong, but it is business." It certainly is wrong, because it is grand larceny, and as certainly it is not business, as any firm known to practise it would be summarily expelled from the Exchange. Denials of the truth of such a statement will hardly be required by people familiar with Stock Exchange usages, but the statement may readily mislead the uninformed. As a matter of fact, all reputable houses make a practice of setting aside, so that they should not be used as collateral in loans, or in any other manner, all securities belonging to customers against which there exists no debt balance. Cases of conversion of customers' property to the use of Stock Exchange houses are less frequent than embezzlements of funds from banks, and there is no worse reason to condemn all Stock Exchange houses for the one than all bankers for the other. It was denied later on that the statement referred to had been made, but the statement had gained wide currency.

THE BOW IN STOCK EXCHANGE PRICES

To the lay mind the rising stock market of the past two months or more is a remarkable paradox. Advancing prices for stocks appear logically to demand increasing corporate earnings; yet ever since last October corporate earnings have been declining, and during most of the period there were no noteworthy indications of a revival in business. It is quite evident, however, that last year's panic depressed the prices of nearly all securities far below their intrinsic value, as those values would be determined under normal business conditions. The very sense and meaning of a speculative market is that it anticipates future rather than existing conditions. Consequently the speculator, knowing that the needs of \$3,000,000,000 people must be supplied, seeing the promise of fairly good harvests during the coming season, and realizing that "easy money" cannot long continue without enterprising business men taking advantage of the fact to plan new enterprises on increased capital, began to "discount" the future, the discount upon the market that is next year, but the market is going up now. Whatever may be Mr. Harrison's failings, the course of events seems to confirm the statement that he is a "practical man." His rescue of the Erie from insolvency required courage and far-sighted judgment. The latter quality is again exhibited in his plans for the financing of Union Pacific. The opinion of Mr. Harrison will differ in many respects, but his resourcefulness and good judgment will probably again find vindication. He is a product of his times.

For the Kingdom of California

THE TRUE STORY OF SAN FRANCISCO'S CIVIL WAR BETWEEN THE GRAFTERS AND THE ELABORATE FORCES OF THE PROSECUTION

I.—HOW ABE RUEF HUNTED WITH HIS PACK OF HOUNDS

By WILLIAM INGLIS

THE war in San Francisco is drawing to a close. There is a simple statement of fact, yet it will probably puzzle ninety-nine out of one hundred of those who read it. What war? Is the question they are sure to ask. Very few Americans east of the Sierras know that the struggle which was begun in San Francisco two years ago is still being fiercely waged, and that in the strife lives have been lost, characters killed, and reputations ruined. To most of us the mention of San Francisco calls up a picture of the city that has been raised from ruin by its courageous people, and now stands stronger and fairer than ever. And the picture is true. A more splendid example of American pluck and devotion than the restored city of San Francisco has never been seen. Nor has a fiercer civil war ever been known than that which is now entering upon its last phases in that city. The side that wins will govern San Francisco—probably control all California.

It was by chance that I stumbled upon the story. Having gone to San Francisco to prepare certain advertising matter for HARRIS WASSLEY, I found the graft prosecution and the offshoots of the various public service corporations still locked in a deadly grapple the reality of which the rest of us Americans had almost forgotten. The Criminal Branch of the Superior Court was and is the principal scene of action. The newspapers were publishing, as they continue to publish at this moment, page upon page of violent partisanship, reports and editorials, the entire community was, as it now is, divided into two factions—the prosecution's friends and those who favor the corporations. Here was a situation, here a story so absorbing that all interest in advertising was extinguished. I studied with care and at great length the records of this remarkable civil war, interviewed the principal men on each side, examined conditions without prejudice, spent six weeks seeking the truth with the diligence bred by long experience as a reporter. Here, then, is the truth as I see it, without bias, without feeling, concerning one of the most remarkable phenomena that ever occurred in an American community.

To begin with, let us remember that San Francisco is the heart of California, and that California is the laboratory of the superlative. Everything done in this community is done with terrific fervor, hospitality, friendship, love, hate, loyalty, jealousy—are all at white heat. The reason is not difficult to find. The pioneers who came here half a century ago found not only mountains reeking with gold, but a glorious semi-tropical climate, a most fruitful soil yielding abundantly beneath the stimulus of the ardent sun. Either backed strong and reckless men from all over the world seeking fortune, enduring privy on the way the perils of the sea or the deadly Indian trails across the desert and over the mountains. These men wrote a law unto themselves. They dug gold and grew rich. The coveting miser of Monday became the million-

nire of Tuesday. They gambled, speculated, gained or lost vast riches, and took the favors or bullets of fate right jocosely.

San Francisco grew from a mining camp to a metropolis, but the spirit of the mining camp dominates it still. The citizens of today are only one generation from the argonauts. Isolated from all the rest of mankind by the Pacific Ocean on one hand and the stupendous mountain ranges and desert spaces on the other, their dominant traits intensified by that isolation, and nurtured in one of the richest lands under heaven, the Californians are a proud, light-hearted, generous, prodigal, kindly, fierce people who do all things at the highest tempo.

For years before the earthquake and fire of April, 1906, this city of half a million inhabitants, widespread manufacture and commerce, vast wealth and high ambition, was ruled by a band of plutocrats. Their access to power was easy. In a period of great prosperity the average citizen was so engrossed in his private business that he gave no time to the regulation of municipal government. Favored by their remoteness from the rest of America, the labor unions of San Francisco had reached a strength of organization unparalleled in any other part of the world. No employer had ever conspired a strike in San Francisco. The unions went into politics. Their principal orator and ablest man was Eugene Schmitz, who as leader of an orchestra in a concert hall was made delegate to the Municipal Union, climbed from that post to control of the entire labor organization, and there came into contact with Abe Ruef.

Ruef was the Republican leader of San Francisco, a wiry little lawyer with curly black hair, shifty black eyes, an excellent mind, great political ambition, and boundless energies. He is a university graduate, a linguist, and a born leader of unscrupulous men. He showed Schmitz how they two could govern San Francisco, and draw money out of it as easily as water is drawn from a tap. The two formed a political partnership, and at the next municipal election took complete possession of the city government. The Board of Supervisors, the legislative branch of the government, was made up chiefly of cut-throat, plunders, and other members of trade unions upon whom Schmitz and Ruef could rely to carry out orders. It is a matter of record that in the entire board of twenty members there were exactly two honest men. The whole machinery of government was deliberately organized for plunder, and the joint business of grafting was carried on with a thoroughness and scope never equaled elsewhere. Schmitz was the immortal head of the government, and his artistic nature resulted in the pomp of office and the frequent practice of oratory—to say nothing of the audacious influx of riches and new luxury, while Ruef was the cunning spider at the heart of the web, the power that ruled Schmitz, the heart, the brain, the cracked, bold, unscrupulous, avocations soul of the administration.

Nothing contrived by man has ever done its work more efficiently and completely than the San Francisco graft

Abe Ruef

"THE FIXING POWER AT THE HEART OF THE WAR, THE POWER THAT RULED SCHMITZ, THE BEAST, THE BRAIN, THE CRACKER, UNCRUEL, UNABASHED, UNBOWING SOUL OF THE ADMINISTRATION"

Rudolph Spreckels

WHO FINISHED THE BUSINESS OF WAR IN THE GRIFT PROMOTION, AND WHO HAS DIRECTED AND CONTROLLER ITS OPERATIONS FROM THE FIRST

machine. All keepers of saloons who feared by breaking the law, proprietors of gambling houses, metropolitan restaurants, etc., paid a tax of extortion that was wisely adapted to squeeze out every dollar the vice traffic would bear. Wretched women paid promptly under penalty of being driven off the street. No lawbreaker was small enough to slip through the meshes of the graft net without paying. No individual, nor firm, nor corporation seeking favor or even their rights of the city government was rich or strong enough to escape. The traffickers in vice paid cash, divided their takings secretly with regularly appointed agents of the machine. Promoters of great enterprises that required municipal permit in order to become active and profitable found it expedient to add Alie Rief to their staff of attorneys. Rief's procedure was not coarse; it was diplomatic, although exceedingly avaricious. Flaxing learned who was the principal individual in a company seeking or about to seek a franchise, he managed to meet that principal individual in a casual way and suggest a brilliant scheme.

"I'd like to be one of your attorneys," was the subtle method by which Rief would insinuate himself. "I feel certain that I could be of considerable help to your concern. I shall expect a fee of ——— dollars a year for ——— years, and I should prefer to have the payment made in one sum."

Sometimes, though not often, the victim succeeded in persuading Rief that the fee was too high and that a reduction was imperative; but always Rief prevailed. For if he were not engaged as attorney, Rief might plant and Apollo might water, but the entire prize would come to naught—withered by the indifference of the Board of Supervisors. It mattered nothing to them whether or not the proposed activities would supply a public need. The only question was: "Is Alie Rief in favor of this franchise?" If the answer was affirmative, the franchise was granted; if negative, the franchise was withheld. The little lawyer's control of the supervisors was perfect. He originally chose them, nominated them to office, and had them elected by means of a fusion between the Republicans and union labor organizations. They were, and they knew they were, his creatures. To him they looked for further advancement in political life, so that in so far as gratitude is a lively sense of favors to come they were grateful to a high degree, and did his bidding without question. Moreover, their status as supervisors brought them an increase of business and profit in their ordinary vocations, for many citizens were anxious to be on good terms with the city fathers. Besides all this, Alie Rief distributed a minor part of his spoils among "the boys." From all that I can learn this largesse was not the result of any sentimental devotion of heart. He did not pretend to render any accounting to his small confederates.

"The supervisors were Alie Rief's pack of hounds, and he hunted with them," was the characterization that a shrewd San Franciscoan gave me. "Now and then, when they become clamorous, he tossed them some scraps of meat. You remember the description Rief has given of them—'so hungry that they'd eat the paint off a house.'"

"Rig Joss" Gallagher was the whipper-in. Jim is a lawyer, too, shrewd, forceful, and persuasive, though not of so able intellect as

Rief, the master. For years the hunt went merrily on. The supervisors generally grew in wealth beyond their early hopes. That is, the eighteen dishonest men did. The two honest men on the board merely did their duty as they saw it, and they have left no-mirrored ever since by the memory of their associations. Schmitz "made" hundreds of thousands of dollars, and Rief dug out of the mine a sum that is computed at one million dollars at the least, and mounts beyond that to any figure that places the taste and fancy of the computer.

San Francisco was richer than ever before in its history when it was shaken by earthquake at five o'clock in the morning of April 18, 1906. The quake did very little harm in comparison with the fire that followed and swept away all the business part of the city, because the water mains had been shattered by the convulsion, and there was no water with which to fight the flames. Within two days a region was devastated equal in area to Manhattan Island from the Battery to Fifty-ninth Street. Of the banks, hotels, office buildings, wholesale and retail mercantile establishments, and hundreds of dwelling places, all that remained were mounds of crumbling masonry and grotesque piles of twisted steel. The last part of the city was reduced to an ash-heap. For weeks thereafter advocates of rival cities were propagandizing that San Francisco could never rise from the dead.

But San Francisco did rise from the dead. Her own people, without a moment of delay, began the work of rebuilding while the rains were still hot and smoking. If even at that late day the gang of grafters who had long fattened on the city's needs had held their hands, had had enough intelligence to let the victim grow strong again before bleeding it again, they might have escaped prosecution. But they were drunk with power and greed, and they fell upon their victim anew. It is true, and it must ever remain to its credit, that Mayor Schmitz rose to the emergency, and during the weeks immediately following the fire he set an example of devotion to duty and unswerving industry, and administered his office for the best interests of the city. But as soon as order was restored, and there were indications that the city was to be rebuilt, the graft machine began once more to grind tribute out of all who asked favors.

No trustee on rapidly will rise to complete without the history of the San Francisco grafters during this period. Great and small had to pay as before, long the needs of reconstruction were so manifold that the graft was richer than ever. Great enterprises were

Francis J. Heney

WHO PROMOTED LUMBER THEFTS IN OREGON, AND HAS COSTLY THE GRIFT PROMOTION IN SAN FRANCISCO UNDER THE DIRECTION OF RUDOLPH SPRECKELS. HE AGREED TO LET THE SUPERVISORS—NEAR CONFESSED THIEVES—GO FREE, IN ORDER TO GET FOR MEN MORE IMPORTANT.

held up in helpless inactivity until their promoters "saw the right party." As for petty extortion, let these two examples suffice:

1. With the water supply reduced to a mere trickle it was necessary to enforce strict fire regulations, and a householder was allowed to maintain fire, even in his cooking stove, until the chimney thereof had been officially inspected and certified. A friend of mine "gave a man five dollars"—not an inspector, of course—and his chimney was inspected and the kitchen fire started immediately. His next door neighbor, with an equally good chimney, refused to "give a man five dollars," and said much about the rights of citizens and duties of officials. Six months passed before his good chimney was inspected.

2. The contractors who carted away debris from the burned district were compelled to pay graft money. If they failed to do this their drivers were held up by the police every few hundred feet and dragged to the station house to explain that they were not thieves. As showing how graft breeds graft there is something humorous in the fact that many of the grafting policemen actually helped certain drivers to steal and sell metal from burned buildings. These things were not hidden from the people. The newspapers were vexed with them. Everybody knew from his personal experience or the experience of his neighbor how the shameless official robbery was carried on.

In the midst of the first activities of rebuilding San Francisco, the United Railroads asked the Board of Supervisors for permission to change its form of motive power. All its lines, hitherto operated by cable traction, were to be changed to electric. The company found the time expedient to adopt the overhead electric trolley system. Immediately public protests were made against the change. The graft prosecution declares that these protests were spontaneous and honest; the railroad officials declare they were inspired by enemies. Able engineers endorsed the public protests that overhead trolley lines were antiquated, unsightly, and very dangerous. Engineers of eminence, on the other hand, reported that the system was perfectly safe, and that even if the overhead trolley wires were not beautiful it was impossible to operate an underground trolley system in San Francisco, inasmuch as there were on the hills on which the city is built sixteen valleys in which during the rainy season water would collect and, by short-circuiting the feed wires, paralyze the whole system. Chief among the engineers who held this last belief was William Barclay Parsons, distinguished as chief engineer of the New York Subway, and in many other engineering achievements. Like all disputes in San Francisco, this one was carried on with much sound, fury, and persistence. The supervisors presently gave permission for the installation of the overhead trolley system, and immediately thereafter the newspapers of San Francisco resounded with the accusation that the United Railroads had bribed the supervisors with \$200,000, paid to Abe Ruef. Officials of telephone and lighting corporations were also accused of bribery.

We of the East who saw nothing and felt nothing of the awful catastrophe that swept away the entire business portion of the city, who did not see the men of means and substance standing for days in the bread line, grateful for the mere means of sustaining life, can hardly appreciate the condition of the public mind in San Francisco when the first effects of the shock began to wear away. The calamity was complete, appalling.

As the people rallied from the shock and bravely set about the work of reconstruction they were still in an avoidable frame of mind. There was much forced gaiety among those who had stood close to death and who still were not sure whether or not all their worldly possessions were reduced to ruin. Exhausted by the stress of emotion and the alternations of hope and despair, the people were easily susceptible to the influence of any one who should loudly proclaim and ardently maintain almost any proposition relating to the punishment of grafters or so-called grafters. The public mind had fallen, as the mind of an individual so often falls in like case, into a sort of hypnotic condition, ready to be swayed by a forceful individuality. We shall see presently how, under the domination of one man, the prosecution, initiated to punish the grafters, was directed into a force which gave immunity to the known criminals in an effort to convict men merely suspected.

From that time in the present the graft prosecution war has been waged in San Francisco. Rudolph Spreckels, James D. Phelan, and other millionaires subscribed to a fund, which Mr. Spreckels personally guaranteed should be not less than \$100,000, to prosecute the grafters and send them to prison. Mr. Spreckels took charge of the fight, and brought in Francis J. Heney, the special prosecutor of Oregon, a lumber thief, to assist him. The results of this war thus far are worthy of special scrutiny by every American citizen. Schmitz has been driven out of office, convicted of extortion, but allowed to go at large on heavy bail because the highest courts in the State held that the conviction was illegal. Abe Ruef is put on trial now and then for bribery, is kept in prison in default of nearly \$400,000 bail, and seems in a fair way to serve a long term in prison. Every one of the grafting supervisors has been allowed to go scot free by the prosecution, with his graft money still in his pocket.

The indicted corporation officials declare that they are innocent, and that the entire force of the graft prosecution has been directed against them by rival interests. These rival interests, they say, are using the prosecution for their private ends, in order to get hold of those corporate properties themselves. The prosecutors deny this accusation, and declare that their motives are just and always have been pure and unselfish. Nevertheless, Mr. Heney says that they have now lost three-quarters of the public confidence and backing which were so enthusiastically theirs two years ago.

The history of this amazing change of attitude toward the prosecution and the story of the work of the prosecution will be taken up in the next article next week.

The Fire Tragedy at Fort Wayne

FAULTY electric apparatus, flimsy construction of the building, and panic among persons aroused from deep sleep, caused the loss of fourteen lives at the burning of the New Avenue Hotel at Fort Wayne, Indiana, on May 4. At 3:20 a. m. the electric elevator caught at the sixth floor, and could not be moved. The operator ran down to the main floor, but before he could report to the clerk there was a flash from the wiring in the shaft on the first floor, and instantly the whole shaft was full of crackling flame. Bellows were sent in all directions to rouse the guests, all

of whom were asleep behind locked doors. Within five minutes the elevator shaft was a roaring chimney of flame which, rebounding from the roof, spread rapidly on all sides and filled the corridors with blinding, suffocating smoke. Men and women still half asleep, stumbled instinctively toward the blazing elevator shaft, only to be driven back to their rooms. All the electric lights in the building were extinguished, and the only illumination was the glare of the flames. The entire fire department of the city was called to the hotel, but one glance showed the impossibility of

quenching the fire. Leaders were run up to windows of the four lower stories of the building, and many of the seventy-four guests were rescued in that way. Others stood on higher ledges, calling in vain for help.

Twenty men escaped by crawling along an outer ledge on the fifth story and then leaping the next house. The panic was so overwhelming that very few of the people tried to use the fire escape.

A. R. Sallet, of New York, crowded along a ledge on the sixth floor, but smoke overtook him and blinded him. Half choked, he began to wave, but he was encouraged by shouts from men on the sidewalk. A sudden glare of light from a window close behind revealed to the bewildered Sallet the figure of a man standing on the roof of the next building. The stranger extended his hand, called, "Come on, brother," and a moment later drew the fugitive up to safety. A guest who jumped from a third-story window to the roof of a small building was not hurt in the fall, but died of suffocation.

The Burning of the New Avenue Hotel at Fort Wayne, Indiana.

The Liner "St. Paul" at Southampton, her Bow-plates stove in by the Collision

English Sailors and Divers searching the Wreck for Bodies. Two Men were below in Irons at the time of the Collision and doubtless perished

THE British cruiser *Gladstone* was recently completely wrecked and nearly thirty of her crew were drowned as the result of a collision with the steamship *St. Paul*, of the American Line, off the Isle of Wight.

In fog and a blinding squall on the 20, *Paul* had left Southampton for New York at midday, and was just off Black Rock, on the north coast of the Isle of Wight, when the *Gladstone*, lying at anchor, suddenly loomed up out of the mist. The ships crashed almost immediately afterward, the *St. Paul* striking the *Gladstone* broadside. The vessels were lashed at once, and it was seen that the cruiser was badly damaged. She commenced to heel over, and an attempt was made to run her on shore, which was partly successful. She was driven into shallow water and lies some 100 yards off the beach at Yarmouth, upon her starboard side.

The *Gladstone* carried three hundred men, many of whom were flung into the sea and rescued by the *St. Paul's* boats, which were quickly lowered at the command of Captain Passon. A number, however, could not be located in the fog and perished. After effecting all possible rescue the *St. Paul* steamed to Southampton. It was found that she had been more damaged than was at first supposed, and it is reported that it will be necessary to end a new stem for her. The *Gladstone* is a second-class cruiser of 5,000 tons built ten years ago, and an element of irony lies in the fact that she was one of those vessels furnished with a ram before the improvement in the torpedo and its increase of range led to the neglect of this feature in war-ships. The *St. Paul*, whose displacement is 11,520 tons, was launched at Vickers' yard in April, 1905, and was adapted for use as an auxiliary cruiser during the Spanish War, when Captain Sigsbee, who was in command, defeated the destroyer *Ferris* off San Juan, Porto Rico.

The Higher Athleticism

By JOHN S. LOPEZ

ILLUSTRATED BY F. STROTHMANN

"Up goes his hands"

"I hadn't the heart to kill him"

"BEYOND a shadow of doubt," said the Serious Student, "the same admirable impulse as inspired the sides of Pinar underlies athleticism today. I do not refer to the professional. Paid athletes are beside the question—often beside themselves. To find the stream of unmythical, unspiced, we must reach its fountain head. This I have a double purpose in attending the commencement of my close sister, I desire to elicit the viewpoint of the young men who shall, I trust, win glory for the university this afternoon."

We descended to the little station and, after a two-mile walk, arrived at the athletic grounds, where the Student led the way around the track to the club house. The visiting college team was picturesquely scattered over the field, knocking flies and, with superb aplomb, carefully calculated throw-ins. The Student passed admiringly.

"It was not so in my day—" he began. But just then there was a rush of feet behind us. It was the home team running out smartly to the field. The Student was so startled that he suddenly backed directly in their way, and was buffeted both and, and finally tripped and overturned accidentally by the coming conjuring heroes.

"It is no I feared," he said, disappointedly, looking down at the riders inhaled in his white trousers. "We are too late to get their attention before the game. Perhaps we can secure permission to sit under the awning with them and talk when they are at the bat."

Directly within the club house, the Student's long thin feet slid suddenly apart, and it was only by a series of marvellous gyrations that he kept from immediately depositing his lanky form in a graceful spiral among the benches of water that stood around the wet and slippery floor. He saved himself finally by clutching the stocky neck of a red-headed, freckle-faced individual who turned to us in mild wonder, a bottle of alcohol and a towel in one hand. As though returning a friendly embrace, he slapped the Student on the back with the free hand.

"Hello, Spike, old boy!" he shouted; "the 'top wants to see you down here."

"I beg your pardon," gasped the Student; "I am an alumnus."

"They were runnin' like kangaroos and gettin' speedier every day"

and want to ascertain if it would be feasible for us to talk—"

"I thought you was Spike Satterwaite, the coach they wired for," broke in the other. "You'd a dead ringer for him, anyway."

"I am not Mr. Satterwaite," averred the Student, smiling modestly; "although in college I knew him—in a way. He is now a professional, I believe—"

"Sure!" cried the red-headed one, enthusiastically. "One of the stars in the National League. An' to think he almost wasted his life by sticking to law. What was your line—runnin'?"

"Personally," said the Student, looking down his long form deprecatingly. "I was not an athlete as an undergraduate. But I am greatly interested in athletics of the present day. I would like to talk with the team, or some one who knows the subject thoroughly—like yourself, for instance—for purposes of comparison."

"There ain't no comparison," said the red-headed one, bridling at the complacent. "An' you couldn't get near the team unless you was a prominent coach. The old democratic spirit's all gone. But I can probably put you wise. Why, I bribed Spike Satterwaite with all his big games. But the dude players nowadays are so stuck on themselves they don't take no pointers from a rubber. Consequence is it's all 'science,' 'science,' and 'makin' doin'." He led the way to a dry corner and procured chairs.

But surely you do not lightly esteem wint scientific physical training less due for our youth," challenged the Student. "The-ere goes those non-scientific, pallid students over there, slaves of the cigarette habit. What chance have they in pursuits which require strength and endurance?"

"Them?" exclaimed the Rubber. "Why, there's five of our best for sprintin'—yes, sir, the very best."

The Serious Student looked puzzled.

"Look-strap," explained the Rubber, "that's been my experience, specially in boy-size recent ad-its of learnin'. I always find them skimpier-headed dope-puffers in more fit up over sports than the students with gladiator dimensions. I'll admit they ain't worth a damn for anything but runnin', but when material is limited, you got to take what offers; an' these is usually the human cigarette-bidders."

Here the Rubber produced a package of cigarettes, selected one with care, rolled it thoughtfully between his palms, and then began to search his pockets for a match.

"It's these," said he, "what makes it possible to develop 'em."

"Cigarettes?" gasped the Student, incredulously.

"Sure!" affirmed the Rubber. "When they go in trains, the dope-slicks is cut off, which most breaks their hearts. An' they watched close, so there's no speak-easy smokin'. It's a trainer I need to work with figured out the real scheme."

"Curly," says he, "these here inhalants is a bum lot to make a shakin' with; but we got to do it, or lose our jobs. Cigarettes has spelled 'em; so we'll fight fire with fire. We got to work on their weaknesses."

"Is it compen?" says I.

"Nonsense," says he; "we'll make 'em win by feedin' 'em dope-slicks in a scientific manner. This constant inhalin' has give 'em big expansions. They'd love long wind, provided we can get 'em to trust air in their lungs instead of smoke. Let's it to me."

"I ain't put wise beyond I've got out of town to smuggle back a outfit of cigarettes—cups for them that likes the taste of harem paper, and Turkish for them that prefers the aroma of the smoke. Next mornin' them agents is made to better around the track, till we find out exactly the best they can do. Then says Murphy, confidential to coach."

"Hard to give up smokin', hey? Tell ye what I'll do. If you bent the time you just made, there's a cigarette waitin' for you in my private office. Then when you bent that time, there's two more. Fact, every round you bent, the amount of snuffs doubles."

"Say, I it worked swell; them fellows took awful chances on gettin' air in their pipes, an' in a week they was jumbies like kangaroos and gettin' speedier every day."

"Ingenious," remarked the Student, his tone hovering between admiration and regard, "but scarcely reasonable. Still, it is a method of getting good out of evil."

"Sure," agreed the Rubber. "but Murphy got the evil out of it. Them despit students done the double cross act; got together an'

seemed to increase their speed only a fraction of a second a day, so before the time the race was on they'd managed to double the allowance so often that Murphy was spendin' more'n his salary for cigarettes. Likewise we was both wore out runnin' all-night smokers in the trainin' quarters.

"Did they make a good showing at the races?" asked the Student.

"We never knowed how that particular bunch come out," replied Carley, with a reminiscent shake of the head. "The day before the race, one of the fellows, named Terwilliger, the best of the bunch, wrenched his ankle. He's hurted." Says he: "It's the only thing I could think of to do with the governor. He's sore at me 'bout this, an' he won't know up. But he's a sport, an' me 'bout this would of turned the trick for a thousand. If I could win, I'd give up five hundred bones."

"I see a sympathetic look come over Murphy at that. In less ten minutes we there's havin' a heart-to-heart talk. That night I sneak off to New York to dig up 'Skippy' McAnulty, who's carryin' a handbook in the Chatham Square district. Skippy's built along the same lines as Terwilliger, an' in his different perfections quick feet has been an absolute necessity. I got a red rag from a customer to match up Terwilliger's roof, an' also ankle up appliances.

"We get back an' in the trainin' quarters without a word gettin' wise. We practice the rest of the night with the make-up, an' trim the wig a bit, an' Skippy does some preliminary trainin' of his own. He won't stand for no stretchin' no more, but sticks to his regular struttin', which is loose, an' our kickin' don't do no good, 'cause he says he's got to be in a trance to tackle such a de-perit proposition. Anyhow, when he ambles out on the track at the last minute with a limp, you'd 'n' swore it was Terwilliger.

"The way Skippy kicks up riders makes the others look like a lot of messenger boys, an' before you got time to think he's built around. Murphy is humanin' 'There'll be a Hot Time' story, when I make a mix-up in the grand stand. Then somebody yells, 'Stop thief!' an' in a second there's a hundred makin' the same sweet shout. They'd got wise on a packpocket.

"Suddenly Murphy grabs my arm an' points. Skippy's lifted his head, dazed-like, gives me scared look, an' the next minute he's beatin' it up the track twice as fast. He goes by the judges like a shootin' star, but he don't make no noticeable effort to stop. Then everybody starts to cheer, an' one enthusiastic student fires a pistol. Skippy actually makes another half lap before we begin to get wise. People is jumpin' out on the track to congratulate him on breakin' all records, an' that wiles it. He dodges a couple, skins over the fence to the inner field an' comes our way.

"He's gone dippy," says one of the judges; 'head him off!' "Several takes steps to do so. Murphy winks significant, an' we heads for the railroad. Lookin' back, we see Skippy wastin' with a dozen stragglers, minus his wig an' most of his clothes. There's an awful amazed wail goin' up from the crowd the outside had to be.

"Perhaps it taught you a lesson," observed the Student. "You bet," agreed Carley; "specially Murphy. When we was safe out of town on a freight car bumper, says he, with some-rambled observations that would of melted a photograph: "Next time we rise in a half-shot dig in a rumble race, we'll put work in his ears."

"Sure conditions must be much better in the sphere of base ball," queried the Student. "No many American legs indulge in the national game, there can be no lack of material. I'm doubtfully the results are obtained by scientific methods."

"You're on," exclaimed the Rubber. "It's science from start to finish; an' it's got to be a 22-karat science, or everybody 'll get wise. You can't pull any of them child underlings like rings in a pressed ball on 'em in the middle of an inning, no stungin' a man with an air rifle when he's at the bat. You got to use real science; an' then you got to be damn careful.

"But I ever saw in that line was a student that was captain of a team who was rubber. I ain't at all surprised he's become one of the best corporation lawyers in the country. Our time wasn't bad, but they wasn't no high with the team we was goin' to play; an' we all know it. Word of it was, last time we was even up in averages, an' whoever won this game got the intercollegiate pennant. Whitson—that's our captain—calls a movie, but then ain't nothin' plausible suggestin'. Whitson is most crazy, but it don't do no good. Finally he says,

"All of you turn in me leave it to Carley an' me. I'll think it over."

"Well, he sits an' thinks an' cusses, till the noon is full of smoke, an' the there's ankle-deep with cigarette butts. Then I figures I'll save time to takin' a shave. I'm trying to prop up a bakin' glass under the electric light, when he gives a sudden yell. "That's it! he looks dazed" around like he's dizzy. "The very thing!"

"What's it?" says I, calmly, fartin' it's an overview of cigarettes.

"The mirror!" he says, "the reflection hit me in the eye. Pay attention!" He gets out a pencil an' paper an' draws plans while he talks.

"By the time the game comes off tomorrow, the sun will be low in the west, just outside of the fence, east of the field is the old empty factory. We'll plant somebody there with a mirror so he can throw a ray in the eye of every one of the other team who's about to ketch a base."

"Sure, I see," I replies; "but it won't work more'n one inning."

"I hadn't reached that," he says; "that'll only be worked one inning. We'll wait till along in the game before we pull it. Then

we'll roll up so many runs they can't ever ketch up. Now, don't say nothin' to the boys; some of 'em's too innocent to be good at actin' innocent."

"I dig up a feller named Lowrey for the job, see? he can be depended on to keep mum, provided you treat him honorable in the lineer line. I ain't afraid he'll be too foolish to aim the thing straight, because he used to hold down a surveyor's job under similar circumstances. Whitson gives him instructions, also a dollar an' a cent and a bottle of Blue Grass rye to entertain him in the building."

"The game stands actually five to three, our favor, in the seventh, when Whitson gets leppish an' gives the signal as the other side takes the field. But there ain't nothin' doin' in lights. Neither of us can get away, so he goes on wavin' his handkerchief through the innin'."

"Maybe he's asleep," says Whitson, as our boys turn out. "We'll get him next innin'."

"Play ball," says the umpire, an' almost immediate the batter drives out a nice fly straight to our centre field. It's in his hands—most—when he turns his head sudden and the ball goes so far the batter never stops till he's safe home.

"Then our pitcher goes to pieces an' puts three men on bases. The next man knocks a nice time foul up in the air that a child could of took, an' our catcher runs for it. All of a sudden he whirle round an' up goes his hands to his eyes. While we're gettin' wise we're double-crossed, three more runs come in. To make a sad story short, I'll state that they scored sixteen on us before I got to the factory."

"What was it?" I asked. "Had your co-scientists betrayed you?"

"Bill could of put down a boxer uprisin' all by himself"

"No," replied Carley. "Consequently I hadn't the heart to kill him. He'd got the instructions tumbled up; thought Whitson said work it on the line uniforms instead of the gray which was their color."

The Serious Student surprised my appreciative grin with a look of reproach. "It is just such deplorable practices that have soured the fair game of sport," he said. "I do not wonder at the efforts of college trustees to restrict athletics."

"No more do I," agreed Carley, tolerantly; "they ain't no more anxious that the trainers are to see their graft laid away. I used to be, when football and baseball an' such was the only college sports, there was time between seasons for the professors to make a bluff at various salaries, an' a trainer's job was an intermittent way of makin' a divvy. Funnies was friendly to athletics in them days. But when the trainers got in soft to stirrin' up an interest in harness, hot-foot-ball, hockey, swimming, track athletics, tennis, an' a lot more, we there'd be some kind of a sportin' season on in colleges all the year round, the professors see we had 'em beat to a standstill, an' got sore on us."

"You mean they regard with disfavor the extent to which sports have come to distract the attention of the student body from education," asked the Student.

"I mean they is jukin' because our kind of education for the student's body is more popular than theirs," said Carley. "Then you have observed the educative value of physical training," said the Student, hopefully.

"You bet I have; it's the only education worth beatin' with," dignified Carley. "An' the reason it's so popular is the trainers can show up results as the professors can't. I don't object to a little book learnin', an' the students don't either if he's made

Cost of Living in New York

By W. DE WAGSTAFFE

HAT does it cost to live in New York?

The clerk whose salary amounts to \$1000 a year will tell you \$1500; the doctor or lawyer whose earnings reach \$2000 laments that extra \$2500 needed to meet his wife's requirements and maintain the social standard which their environment demand. So it goes up the scale, until we reach the multimillionaire; and even here, it has been whispered, the pinch of poverty has been felt sometimes. For the truth is that there is no standard of comfort and no end to luxury. All is relative; and one can be just as poor on \$50,000 a year as upon \$1000.

There is one fact brought home at every street corner, in every hotel and saloon, in every business office and theatre of the town, to the wage-earner. We are a city of speculators and gamblers.

Permanent content is not to be found in wages, because the landlord, the gas company, the tax collector, grocer, butcher, and tailor eat up your weekly stipend. The theatres, the shop windows, the cafes deplete your purse. And we have reached that stage of general comfort where luxuries have become necessities. Besides, we must entertain ourselves and vie with our neighbors in stretching our incomes to maintain the hollow fabric of ease, because our incomes are, in their turn, largely influenced by our appearances. As a type, the old-fashioned worker, spending laborious years that he may not see a pitance arise against old age, has become extinct as the lion, so far as New York is concerned.

There are, of course, isolated instances of homogenous character that, with herculean stability, ignore the luxuries of New York and follow the simple life. It is possible to make of necessity a virtue and endure jailings, cheap restaurants, ready-made clothing; but who expects to be such a martyr? Economy walks her narrow path alone.

Economy is nothing but poverty in New York, by contrast with the abnormal demands that living involves. Spending fifty cents for breakfast, going without luncheon, and saving a dollar for dinner is economy for a single man. A breakfast that costs thirty cents and a dinner sixty cents is poverty. The boarding-house life is poverty; the lodging-house life is something worse; and the ordinary life in a flat is voluntary servitude.

Sociologists claim that the lowest possible yearly expense for a workman with a wife and three children, embracing a normal standard of living, is \$400. The statement was made recently by the New York Department of Charities that the average laborer's family in New York is existing on about \$700 a year. The minimum rate of rent on the East Side for the barest dwellings is \$4 a month. Coal costs from ten to fifteen cents a pile, a fabulous price when estimated by the ton.

Yet between this poverty and the "economy" of the small-salaried employee who is compelled to adjust his earnings to the demands of his occupation there is small difference. We live in New York by the cost, rather than value of things. An apple purchased on Fifth Avenue costs twice as much as the same apple bought on Fourteenth Street. The dollar bowery shirt costs twice as much on Broadway. This is the city where they "pay the price."

Here is a table of expenses presented by a man who lives in New York on \$35 a week:

Personal allowance for clothes, presents, amusements (husband and wife \$5 apiece)	\$10.00
Rent	7.00
Gas	.70
Insurance (\$2000 policy)	1.10
Help (washing, ironing, and cleaning)	1.50
Housefurnishing	1.00
Books, dentists, and medicine	1.00
Food (not mentioned, but necessary)	7.00
"Enough left" (might be saved)	5.70

A young lawyer and his wife furnish an example of existing in New York on a minimum income. Here is how they did it for four years:

	1903	1904	1905	1906
Real	\$222.00	\$258.00	\$264.00	\$266.00
Groceries	202.20	276.94	283.75	333.10
Clothes	21.29	18.50	18.40	18.70
Repairs and running etc.				
pens	53.83	21.52	65.50	47.29
Laundry and service	28.02	27.91	31.00	42.52
Education	35.00	18.32	91.13	40.00
Car fares	28.03	42.90	43.62	56.75
Clothing	163.06	109.04	109.18	232.60
	\$807.14	\$836.47	\$907.58	\$1037.05

The tragedy of New York life is its compelling note of extravagance that hums in the ears, and thumps at the heart, and turns the brain. From the very rich to the poorest it dominates the minds of all.

The washerwoman who for a pittance prepares the wife that has had fashions prices becomes demoralized by the revelation of extravagance in her wash tubs, and promptly squanders her earnings on some trashy piece of flattery. The shop girl, surrounded by the

costliest fashions, is driven to buy the most expensive dress that her means are able to procure. The imitation is obvious, of course, but not to the shop girl who seeks to be like the rest of us, an impressive woman in the great show. The wage types which she is asked to live in beneath the standard of bare existence which the sociologist estimates, and yet her employers expect her to look as though they were paying her to dress like a woman of fashion. The actress is compelled to mortgage half a season's salary, or even to invest hundreds of dollars in a play that may be a failure, that she may appear to the utmost advantage on the stage. The milliner's girl is inspired by the glamour of the extravagance about her to mortgage her wages to her employer, that she may not look like the struggling little slave of the shop. The cloak-maker must reimburse the woman whom she meets in the store, of fall to lure the customer. The clerk in Wall Street loses confidence in his old clothes, and goes into debt to a fashionable tailor. So does his employer, and for the same reason that the clerk does, to play their part in the great show. These are the victims of the miles of shop windows offering baits set forth by the cleverest money-grubbers in the world.

The great stores of the city put a premium upon extravagance; by their persistent invitation to open credit accounts. They send out elaborately engraved circulars inviting trade. A superficial appearance of solvency is all they require. A lacking reference which consists of a perfunctory statement from the bank that their dealings have been satisfactory is usually sufficient. For the rest they trust to outward appearance. In the social character of your front door. The cash customer is not treated with half the courtesy that the credit customer is, because the store merchant knows very well the sinister temptation to buy more on credit than goods could be paid for upon a cash-basis.

The man who pays \$40.00 a year for a suite of rooms in a hotel is doing something that would be quite impossible in any other city in America. Yet it is not an extravagance in New York, because he is a millionaire, and is doing what New York expects him to do. A woman who can afford to use perfume at \$25 a drop is entitled to do so, and New York respectfully records the item as an evidence of its supreme luxury. An epicure can spend \$200 a day on his table, or a woman pay \$3000 for a gold and jeweled purse, or \$200,000 a year for games, and New York is proud of the display. A half ornament may cost \$15,000, or a marble bath-tub \$50,000, and each, in its way, fills the long-felt want of a New Yorker. It is estimated that a gown that is correct should cost \$700. Three hundred dollars for a dress is in a simple matter that can make no startling impression. A woman's hat, to be in the best imported style, ran cost \$100 in New York. These are fringes of extravagance that set the terrific pace for the rest to follow.

The man of smaller means rents an apartment at \$1200 a year in a pretentious-looking sort of hotel that depends upon an elevator for its prestige. He wears a dress suit in the evening, and puts \$25.00 for a dinner for himself and his wife at a restaurant. His income is perhaps \$4000 a year, and he has to bring in the milk and rolls himself for breakfast. But that item is a secret. New York has made him inwardly ashamed of his salary, and his only content comes when he recalls some mooned acquaintance. The "man with money" is usually a man of "financial nerve." This is a favorite phrase of the speculator, and the wage-earner adopts it. "Financial nerve" really consists of carrying debts as long as the law allows, on the possibility of a 500-per-cent profit arising from some speculation. The risk is universal in New York, because the happiness of the New Yorker depends, not on the amount of money he has, but on the amount of money he or she is likely to get in one way or another. The man who intends to speculate in earnest must look as though he has the opportunity. He becomes a speculator at heart, and distrusts his wages.

The self-indulgent man who spends \$500 a day when his money out of his wages. The woman who could not manage her household for a season on less than \$75.000 is not the daughter or the wife of a wage-earner. Economical beginners really have no actual relation to the existing problem of living in New York.

What does it cost to live in New York? More than you can ever hope to earn by wages; and so far as the chances of speculation are concerned, that infers the necessity of "pull." If you haven't a "pull," social or political or financial, your speculative chances are null. Obviously this state of restless endurance is demoralizing. It undermines character. Presently you find yourself following the procession of people who are living beyond their means, because they seem to be enjoying themselves at it.

"Pay, pay, pay!" All New York makes this demand, and, in the same instant, explanatory fashion, puts the price always just beyond what you really can afford to pay. This is the city of highest prices. Of all 4,230,000 inhabitants, who can say they are living in normal economy? Who can openly show an even balance of accounts to their creditors? A few sterling women, who have an instinct for honesty and economy; a few, very few, men who are wiser than their generation.

The only way to live within your income in New York is to become blind to the very extravagances and allurements that make this the metropolis, and to merit the pleasures of temptation for the comfort of an honorable old age.

English Critics of America

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR 'HARPER'S WEEKLY'

ENGLISHERS' gatherings usually have a salt and freshness of their own, but one I was present at the other day appeared to me as peculiarly exhilarating. The occasion was the annual meeting of the London School of Sociology, convened by an address on "Some English Critics of the United States," by Mr. T. Graham Brooks. For some weeks past Mr. Brooks has been lecturing to the School of Sociology on certain American problems, and lecturing, let me add, not only with the dispassionate accuracy, and the intimately human touch that characterize all his work, but also with a remarkable facility for telling his audience just what they most needed to know. His address of the other day was not part of the course he had mapped out, but an extra thrown in to grace the annual meeting of the school. Mr. Brooks, it seems, has been delving into the vast literature of criticism that has grown around the United States in the last hundred and twenty years. His researches are to be embodied in a book entitled *As Others See Us*, which, I understand, shortly to be published. The subject has a perennial interest, and from the foretaste which he gave us the other day I should say that Mr. Brooks's treatment of it will prove to have done its attraction. He began by recalling some of the early prophecies of American disruption,—how one critic was confident that a country in which Church and State were things apart could not possibly endure, how another scented a fatal pest in the growth of luxury, how a third forebode that in the absence of primogeniture the great experiment was bound to fail, and how a fourth pledged himself to the opinion that the weakness of the Federal government in comparison with the strength of the States would inevitably wreck the Union. He quoted from Sydney Smith, from Wordsworth, and from Tom Moore; he passed in review De Tocqueville and Dickens and Mr. Disraeli; he dwelt upon the change in the English attitude towards America that set in after the close of the Civil War; and turning to the English critics of to-day he showed how completely they had dropped the old tone of superciliousness, with what determination they searched for the brighter side of American life and conditions, and how in the case of Mr. Morley, for instance, when they denied that Americans cared more for money than other people—they even advanced a higher claim for the country and its people than the Americans themselves had ventured to put forward.

In the discussion that ensued two points in Mr. Brooks's address were especially noted upon. One was his assertion that after the Civil War the spirit of British contempt upon things American underwent a great change. No one disputed the fact, but many of the speakers were inclined to attribute it to wider causes than any that Mr. Brooks mentioned. He regarded it as due primarily to the Anglo-Saxon worship of success. All the Englishmen who followed him agreed that intercourse with the factor was a genuine admiration not merely for the triumph, but for the cause in which the triumph was achieved—a cause that involved not alone the transcendent issue of slavery, but also problems of high politics and fundamental points in the very structure of government as searching as any that any nation has been called upon to solve. The chairman of the meeting, Mr. A. L. Smith, the brilliant professor of history at Balliol College, Oxford, elaborated this view with an illuminating pungency; and the general sense of those present sided with him. There is a passage indirectly bearing on this point in one of John Morley's essays which I venture to reproduce here. Mr. Morley is reviewing Sir Henry Maine's book on *Popular Government*. After a gentle exposure of Maine's theory that Rousseau and Bentham are the two great fountain-heads of political theory in modern England, Mr. Morley goes on: "Sir Henry Maine himself points to what has had a far more decisive influence on English ways of thinking about politics than his two philosophic pat together. 'The Aurorian Republic,' he says, 'has greatly influenced the law into which popular government grew. It disproved the once universal assumption that an republic could govern a large territory, and that an strictly republican government could be stable. Solidity ran be more true. When Burke and Chatham and Fox persistently declared that the victory of England over the colonies would prove fatal in the long run to the liberties of England itself, those great men were even wiser than they knew.' The success of republican government across the Atlantic has been the strongest incentive to the extension of popular government here. We need

go no farther back than the Reform bill of 1807 to remind ourselves that the victory of the North over the South, and the extraordinary clemency and good sense with which that victory was used, had more to do with the expansion of the franchise to householders in boroughs than all the eloquence of Mr. Gladstone and all the diplomacies of Mr. Disraeli."

The other point in Mr. Brooks's address which was eagerly debated by the subsequent speakers was the American attitude towards money. This is a topic which I have often thought some Americans essayist of style, discernment, and experience of the world, should be deputed by his countrymen to handle for the instruction of Europe. Robert Louis Stevenson would have treated it to perfection. I do not know that America possesses to-day a writer quite on the Stevensonian level, but I should be ready to sacrifice a good deal of literary beauty for the standard of getting before the world a competent essay on the American philosophy of money. It is a subject on which the average opinion of Europe is not only hopelessly misinformed, but without the means of enlightenment. Every one who knows America knows that to the Americans the American is a money-grubbing people is ludicrous. Yet it is in this light and in no other that Americans chiefly present themselves to the imaginations of foreigners. Mr. Brooks rightly asserted that there is in the United States practically none of that sordid love of money which is to be found in France, and which the pages of Balzac republish with an almost repulsive fidelity. Mr. A. L. Smith not only endorsed this, but insisted, what also is not, I think, to be disputed, that the responsibilities of wealth are far more widely recognized in the United States than in England. Yet it is probably the fact that no people talk and in some ways think so much about money as the Americans, or so apt to measure things by the standard of dollars and cents, or have achieved so universal a reputation for being saturated with the spirit of materialism in its least pleasing form.

The varying aspects of this seeming contradiction were discussed with real acumen, after the close of Mr. Brooks's address, by several Englishmen who had been to America, who knew what they were talking about, and who started from the proposition that to think of Americans as mere money-worshippers was utterly to misunderstand them. One speaker emphasized the fact that the American's real pleasure consisted not in having money, still less in hoarding it, but in getting it, and in getting it in competition with brains and aptitudes as keen as his own. Another speaker dwelt on the magnificent scale of American expenditure for educational, scientific, and philanthropic objects as a proof of their indifference to money as such. A third put forward the view that the habit of using the dollar as a too frequent measuring yard was the accident of history and of the inevitable absorption of a new country in the rough work of empire-building, and that it simply represented the haultiest standard of values that the American happened to have by him. In itself, he argued, it meant little or nothing to the Americans who employed it; it was merely a convenience the workings of which were universally understood; the Americans would have been just as willing to adopt any other basis of comparison and appreciation had they chanced to find one as widely known and as readily comprehended. A fourth speaker put down much of the American talk about dollars to the national spirit of conservatism, of "wanting to know," and to get in touch one with another, and to the national preference for visibility and an exchange of confidence over the reserve which among Englishmen is the first law of conduct. "The Americans," he declared, "do not care a bit more about money than we do ourselves. The only difference is that they talk about it, and we don't."

Altogether it was an extremely interesting and pointed debate, conducted in the friendliest possible spirit and in just the right kind of temper. There was one American present who did not apparently quite catch the drift of what was being said, though he detected some further instances of British "superstition," and in a speech that came periodically over being a fourth of July orator demanded that all international criticism should forthwith cease. But the prospect of England and America walking henceforward as on eggshells, and hugging to themselves their private opinion of one another, did not commend itself to him, and he was received and voted down in a masterly British silence. One rose away after a two-hours debate with the feeling of having assisted at what it would not be too extravagant to call a historic occasion. At any rate, for the student of Anglo-American relations and the advocate of friendship and understanding between the two countries, there was in that little meeting and in the tone of the speeches something singularly significant and hopeful.

The Anglo-French Fair

The Indian Building in the Court of Honor

The Royal Pavilion

The Palace of Women's Work

The British Applied Arts Building

HE suitability of the Anglo-French enterprise has just been demonstrated by the opening of the Franco-British exhibition, on May 11, at Shepheard's Bush, a western suburb of London.

This is the first occasion upon which two nations have held an exposition jointly, in the exclusion of all others; and its political significance will be discussed by a joint visit in state by King Edward and President Fallières.

The exposition is the largest that has ever been held in the British Isles. It covers 100 acres of ground, and during the sixteen months that have elapsed since its inception a city of palaces of concrete and steel has been erected, while two large lakes, connected by more than a mile of artificial waterways, have been excavated.

One of the most interesting features is the great stadium in which the Olympic games will be held. It measures 1000 feet by 502, and holds ten miles of seats, capable of containing 150,000 spectators. It contains an enormous central lawn, cycling and cinder tracks, and a swimming tank. Besides athletic games of every description, angling and its racing competitions will be held; and the long-distance race between Windsor and London, the "Marathon race," will be concluded there on July 24.

The Palace of Women's Work contains costumes, lace, embroidery, and tapestry, as well as historical relics, such as embroidery worked by Mary Queen of Scots a scalloped gown by Elizabeth, and the gloves which Charles Stuart wore when escaping in his famous attire. Within a model hospital ward nurses give demonstrations in setting bones, the use of the Binion rays, and the care of babies.

Near the Royal Pavilion, in which the reception will be held by President Fallières and King Edward, is Colonial Avenue, where buildings have been erected by the colonies of England and France. The Canadian exhibit alone occupies a block covering over

120,000 square feet. Among the numerous features is a scenic railroad one mile in length, which has been erected at a cost of \$100,000. Then there is the Irish village, Ballymacclinton, which covers a space of seven acres. It contains full-size reproductions of some of the famous monuments of Ireland, including the Harney Stone. There are also an ancient abbey from Donaghmore, and the celebrated cross which has stood at Monasterboice for over a thousand years. Of historic interest is the cottage in which President McKinley's grandfather was born. The windows and doors and the furniture seen in it have come from the original dwelling in Ireland. There is a Galway fisherman's cottage with a coracle in front of it; and in other cottages lace-making, embroidery, and various other Irish industries are carried on.

Near by are the Indian village, the Oriental Sports and Fair ground, and the Indian Theatre. In the last named, which has an area of 40,000 square feet, and a seating capacity of 2000, a typical Indian durbars is shown. Within the village precincts a host of elephants, natives, camels and zebras are exhibited. The elephants appear in the durbars procession in their gorgeous trappings, carrying gilded howdahs on their backs filled with rajahs and maharajahs habited in jewels and costly raiment. A number of Nauteh girls entertain visitors with their dances, and conjurers and snake-charmers perform. A trained mastiff in a tiger's skin is hunted daily through a real jungle. Among other edifices are the huge Machinery Hall, Palaces of French and British Applied Arts, an African village, and the usual exhibition attractions, such as the flip-flop, which consists of two massive arcs of steel built on the counterforce principle, some 150 feet in length. At their extremities are hanging galleries capable of holding some fifty persons. By an electrical engine these counterbalanced arms are raised vertically, and then descended again, depositing the occupants of the arcs a distance of 100 feet away from where they started. The total cost of the erection of the eddies and buying out of the grounds amounted to \$11,000,000.

The Tyranny of the Ticket Speculator

By FRANK MARSHALL WHITE

HE technically first-class theatres in the City of New York (aside from the opera-house, and musicals), of which there are fifty-three, will take in at their box-offices in the ordinary course of business this year between eight and ten million dollars, and their patrons will be seated out of another million that will go into the hands of ticket speculators and hotel dealers, a part to be again divided up among the less scrupulous managers. In other words, the patrons of the New York theatres will pay ten per centum premium for dramatic entertainment in order to remunerate a couple of hundred raffish for hoarding them on the sidewalk; to make large profits for half a score of dealers at the hotels who have no reason to desire, and to increase the revenue of these managers who get money by false jettisons.

To trace the relationships existing between the managers and the speculators is a difficult matter, because there are factions in both bodies, and certain members of every faction who will leave their part in the lake that lurcheth with fire and brimstone—if the Scriptural promise with regard to fires is relieved. However, in the best analysis it comes to this: that the continued existence of the plague of ticket speculators in New York is directly due to Tammany Hall, as an example and a shield under which the city suffers. The honest theatrical managers, who are in a minority, would have been able to regulate at least, if not to abolish, sidewalk speculation in tickets had not the issue gone over their heads to the politicians.

It is not necessarily the manager who makes the loudest outcry against the ticket speculators in front of his theatre who is the most sincere in his efforts to abate the nuisance, by the way. When he kicks one of those gentry off the sidewalk, for instance, it is an even chance that his noble indignation is fired by that particular speculator's interference with other speculators whom the manager has himself placed on the sidewalk, and whose tickets he will be compelled to refuse if they are not sold. They will tell you at the Mayor's office, as an illustration of this condition, that one of the theatrical firms that have been selling down the most frenzied carous upon the sidewalk business, pays regularly for licenses for the use of men in its own employ who sell tickets in front of its theatres every night. Police Magistrate Corrigan, finding some speculators for creating a disturbance in front of a theatre on a Sunday night, related an incident bearing on the same point. The magistrate said that on going to the box-office of a Broadway theatre recently, he was informed that the house was sold out, whereupon he purchased tickets from a man in the lobby at an advanced rate. When he came to the theatre in the evening this same man was taking tickets at the gate in defiance.

Here is the experience of a man who invited two women acquaintances to go to the theatre with him, and who put off until the night of the performance the purchasing of tickets. When he asked for three seats at the box-office he was informed that there was not one to be had in the house. As he came out of the lobby he was surrounded by a vicious band of men who proceeded to offer him seats in the best part of the house at four times the box-office price. Calling their attention to the sign which gave warning that tickets on the sidewalk would not be accepted at the door, he was told by the speculators that the sign was "a fake"—that the theatre "was legally obliged to accept its own tickets." The unfortunate gentleman finally purchased three *dehors* chairs for \$3 each, presented them to the ticket-taker at the door, and was refused admission.

The ticket speculators, scattered, are divided into two classes, in fact: those who really speculate, and those who sell at an advance without taking any risk. These in the first class are the most persistent, for they have purchased tickets outright, and will lose money if they are unable to dispose of them. These are the men who sell below box-office prices on a rainy night in order to get rid of their tickets. In the second class are those sidewalk dealers who have no profits with the managers, by which the latter share their profits and take back unsold tickets, these dealers being outsiders into whose class are enrolled all who make a performance, and the wholesalers who have charge of the legitimate output of the different theatres that engage in this underhand traffic, and hire others to do the work for them. The Times is authority for the following statement on this point: "One such wholesaler is a recognized character among theatrical men. He has offices in the same building with a large theatrical firm, and apparently deals with them in another capacity. He takes no risks, and his affiliation with the managers is so close that the men he employs in front of a theatre are really as dependent on the managers as they are the box-offices. Legal proof of this traffic has never been established, but even the name of this man is no secret in the street."

It is unfortunate that legal proof of this particularly mean and contemptible traffic may not be established, and the managers who duped their patrons shown up. The present situation is outrageous. As matters stand, the ticket speculator is without any of the popular dramatic successes, most often purchase seats day and even weeks beforehand, which is a hardship, since dramatic success are likely to be lost to prevent their use (and it is only in the

loosely conducted theatres that he can purchase good seats at the box-office price in all; in the other houses the speculators have first choice all through the run of a piece), or he must pay double or quadruple the advertised price on the sidewalk. These conditions prevent people of moderate means from attending the theatre altogether, or make indulgence in histrionic entertainment an unwarrantable extravagance, while it is absolutely prohibitive in the instance of men and women of refinement and small means, who would find no pleasure in witnessing a play among the unselected from the galleries.

For the existence of the sidewalk speculator there is not one single reason, from the point of view of the theatre-goer, and certainly not more than one for the existence of the "brokers" in the hotels, for whom entire portions of the house are reserved, and who sell at a uniform advance in price of fifty cents per ticket. The theatrical managers explain that the hotel stands are provided for the convenience of the public, and even intimate that an increase in the price of seats of from twenty to thirty-three and one-third per centum for the accommodation is in the nature of benevolence. However, the hotel brokers, while expelling the patron of the theatre as consistently as the man on the sidewalk, does not constitute an actual and active pest like the latter. That the business of selling theatre tickets away from the box-offices is profitable may be gathered from the circumstance that the most important of the hotel brokers who deal nightly in seats are said to have net a fortune of something like a million dollars, derived principally from this source, and that several of the speculators on the sidewalk to-day are estimated to be worth from \$50,000 to \$100,000 each. Indeed, one of them is said to have between \$200,000 and \$300,000 in cash on hand. The Times is informed on good authority that three sidewalk speculators divided up \$48,000 as the profits of last year's campaign.

Speculation in theatre tickets began in New York with the appearance of Henry Lind at the Casino Theatre, now the Aquarium, in 1858; but as Harman sold the tickets at auction for his concert, there was no scandal perpetrated on the public, though the speculators who purchased promiscuous tickets in bulk at \$1 each were said to have got as much as \$100 apiece for some of them. The hotels also purchased tickets at the auction, the newspapers at that time recording the sale of twenty tickets at \$0.20, twenty at \$0.30, and some at \$5 each in the Irving Hotel (where the drama was stopping), of ten at \$5.75 each at Hudson's Hotel, and of another lot to the Astor House. Says the Evening Post of September 10, 1859: "There continues to be a great demand for tickets to the Henry Lind concert tomorrow. We understand that theatrical Hall has a number of tickets of Mr. Wrenn's sale are entitled to infer that ticket speculation was not as disreputable a business in its inception as it has become since."

It is within the last thirty years, however, that the real commerce in theatre tickets began, but a previous generation that protested at being compelled to pay as much as \$10 and \$20 each for a seat, and some at \$5 each in the Irving Hotel (where the drama was stopping), of ten at \$5.75 each at Hudson's Hotel, and of another lot to the Astor House. Says the Evening Post of September 10, 1859: "There continues to be a great demand for tickets to the Henry Lind concert tomorrow. We understand that theatrical Hall has a number of tickets of Mr. Wrenn's sale are entitled to infer that ticket speculation was not as disreputable a business in its inception as it has become since."

One measure after another has been introduced in the State Legislature and in the City Board of Aldermen to "mend or end" the sidewalk ticket speculation. A bill that got far last year so to be rejected by the Committee on Law and Legislation of the latter body provided for the wiping out of the speculators altogether, and that tickets should not be sold in the hotels at an advance in the price marked on them. Another bill that passed in the Assembly last year made it a misdemeanor, punishable with fine and imprisonment, for any person to conspire with a manager or owner of a theatre to raise the price of a ticket. Last February a bill was introduced in the Assembly requiring that every place where theatre tickets are sold or delivered be licensed; raising the present rate of \$50 in the first instance and \$25 annually for a ticket-speculator's license to \$500 the first year and \$200 for renewal, and providing that upon complaint of any person delinquent in paying a license, a warrant should be issued, and the granting of another prohibited. These measures were defeated, as many others like them have been, by the Aldermen and State legislators who represent Tammany Hall, to which organization the ticket speculators were allies.

According to the Herald of October 23 last, at a meeting of the Theatrical Managers' Association the previous day, a motion made by Harry Klaw, and seconded by Henry B. Harris, that a committee be appointed to confer with the Merchants' Association, the City Club, the People's Institute, the West End Association, and the Citizens' Union, for the purpose of obtaining cooperation in the extermination of the sidewalk speculator in theatre tickets was carried. Inquiries of the president of the Theatrical Managers' Association, in the office of Mr. Klaw, and of other leading managers fail to elicit any information as to the progress made by this committee. The combined influence of the organizations mentioned seemed to be sufficient to overcome the opposition in Tammany Hall to the abatement of the ticket speculator nuisance, the more particularly as these are powerful members of the latter institution in the Theatrical Managers' Association.

AUTHOR OF "THE CALL OF THE BLOOD," "BARBARY SHEEP," ETC.

CHAPTER XVII

THAT night the Marchesinos failed in his search for Vere, and he returned to Naples not merely disappointed but incensed. He had learned from a fisherman in the Saint's Pool that she was out upon the sea "with a signora," and he had little difficulty in guessing who this signora was. Of course it was "cousin Emilia," the petron of Maria Fortunata. He began to consider his friend unfavorably. He remembered how frankly he had always told Emilia of his little escapades, with what enthusiasm, in what copious detail. Always he had trusted Emilia. And now Emilia was trying to play him false—now, was making apparently a complete success of the attempt. Yet Emilia and Vere must have heard his beautiful singing, must have guessed from whom that vibrant voice proceeded, must have deliberately concealed themselves in his possession. Where had they lain in hiding? His shrewd suspicion fell upon the very place. Virgilius's dacha had surely been their refuge.

"Ladro! Vigilante!" Words of no uncertain meaning flared from his overheated heart. His whole bad nature was aroused. His spirit was up in arms. And now, almost for the first time, he drew a comparison between his age and Emilia's. Emilia was an old man. He realized it. Why had he never realized it before? Was he, full of youth, beauty, chivalrous energy and devotion, to be interfered with, set aside, for a man with gray hairs thick upon his head, for a man who spent half his hours lost over a straggling table? Emilia had never wished him to know the ladies of the island. He knew the reason now, and glowed with a fiery lust of battle. Vere had attracted him from the first. But this opposition drove an attraction into something stronger, more determined. He said to himself that he was madly in love. Never yet had he been so sure in an answer by any man. The blood surged in his head at the mere thought of being conquered in the only battle of life worth fighting—the battle for a woman, and by a man of more than twice his age, a man who ought long ago to have been married and have had children as old as the Nigropolis Vere.

Well, he had been a good friend to Emilia. Now Emilia should see that the good friend could be the good enemy. Late that night, as he sat alone in front of the Caffè Tarco smoking innumerable cigarettes he resolved to show these smokers the stuff a Neapolitan was made of. They did not know. Poor ignorant beings from cold England, drowned in perpetual yellow fogs, and from France, country of volubility but not of passion, they did not know what the men of the south, of a volcanic soil, were capable of, once they were roused, once their blood spoke and their whole nature responded! It was time they learned. And he would undertake to teach them. As he drove, towards dawn, up the dusty hill to Capulcinato he was in a fever of excitement.

There was excitement, too, in the house on the island, but it did not centre round the Marchesinos.

That night, for the first time in her young life, Vere did not sleep. She heard the fishermen call, but the enchantment of sea songs did not stir her. She was aware for the first time of the haunting horrors of life. There, in the darkness beneath the cliff, Peppina had sobbed out her story, and Vere, while she listened, had stepped from girlhood into womanhood.

She had come into the house quietly, and found Artois waiting for her alone. Hermine had gone to bed, leaving word that she had a headache. And Vere was glad that might not be to see her mother. She wished to see no one, and she bade Artois good by at once, telling him nothing and not meeting his eyes when he touched her hand in adieu. And he had said nothing. Why should he, when he read the truth in the grave, almost stern face of the child? Vere knew.

The veil that hung before the happy eyes of childhood had been torn away, and those eyes had looked for the first time into the deeps of an unhappy human heart.

And he had thought it possible to preserve, perhaps for a day while Vere's beautiful ignorance undisturbed. He had thought of the island as a safe retreat in which her delicate, and as yet childish, talent might gradually mature under his influence and the influence of the sea. She had been like some charming and unusual plant of the sea, shot with sea robars, and with sea winds, fresh with the freshness of the sunbaked waves. And now in a moment she was dropped into the filthy shoddy of city horrors. What would be the result upon her and upon her shining gift?

The double question was in his mind and quite honestly. For

his interest of the literary man in Vere was very vivid. Never yet had he had a pupil, or dreamed of having one. There were writers who found a school, whose fame was carried forward like a banner by young and eager hands. Artois had always stood alone, ardently admired, ardently condemned, but not imitated. And he had been proud of his solitude. But—hah!—had not underthoughts come into his mind, thoughts of leaving an impress on a vivid young intellect, a soul that was full of life, and the beginnings of energy? Had not he dreamed, however vaguely, of forming, like some sculptor of granite, an exquisite statuette—poetry, in the slim form of a girl-child singing to the world?

And now Peppina had rushed into Vere's life, with sobb and a tumult of crises to the Madonna and the saints, and, no doubt, with impressions upon the wickedness of men. And where were the dreams of the sea? And his dreams, where were they?

That night the irony that was in him woke up and smiled bitterly, and he asked himself how he, with his burden of years and of knowledge of life, could have been such a fool as to think it possible to guard any one against the assaults of the facts of life. Hermine, perhaps, had been wiser than he, and yet he could not help feeling something that was almost like sympathy against her for what he called her Quixotism. The woman of passionate impulses, how dangerous she is, even when her impulses are generous, are noble! Artois without thought, though the prompting heart behind it be a heart of gold—how fatal may it be!

And then he remembered a passionate impulse that had driven a happy woman across a sea to Africa, and he was ashamed.

Yet again the feeling that was almost like hostility returned. He said to himself that Hermine should have learned caution in the passing of so many years, that she ought to have grown older than the sea had. But there was something unconquerably young, the unconquerably alive, in her, something that, it seemed, would never die. Her cleverness went hand in hand with a short-sightedness that was like a rather beautiful, yet sometimes irritating stupidity. And this latter quality might innocently make victims, might even make a victim of her own child.

And then a strange desire rose up in Artois, a desire to protect Vere against her own mother.

But how could that be done?

Vere, guarded by the beautiful unconsciousness of youth, was unaware of the subtleties that were brought into activity by her. That the Marchesinos was, or thought himself, in love with her she realized. But she could not connect any root-sincerity with his feeling. She was accustomed vaguely to think of all young southern Italians as perpetually sighing for some one's dark eyes. The air of the south was full of love songs that rose and fell with out much more meaning than a twitter of birds, that could not be still because it was so natural. And the Marchesinos was a young university who did absolutely nothing of any importance to the world. The southern blood in Vere demanded other things of a man than limitations of a soul, the river driving of a fount in hand, light-dotted dancing, and songs in the guitar. In Giuseppe she saw more reality than she saw as yet in the Marchesinos. The dawning intellect of her began to grasp already the ability of work. Giuseppe had his work to do, and did it with loyal efficiency. Ruffio, too, had his profession of the sea. He drew out of the deep his livelihood with the fever almost upon him he had been set by night in the storm. That which she liked and respected in Giuseppe, his perfect and unaltered acceptance of work as a condition of his life, she liked and respected in Ruffio.

On the morning after the incident with Peppina Vere came down looking strangely grave and tired. Her mother, too, was rather heavy-eyed, and the breakfast passed almost severely. When it was over Hermine, who still conducted Vere's education, but with a much relaxed vigor in the summer months, suggested that they should read French together.

"Let us read one of Monsieur Emilia's books, madre," said Vere, with an exaltation of conviction. "You know I have never read any two or three lovely stories, and articles that don't count."

"Yes, but Emilia's books are not quite suitable for you yet, Vere."

"Why, madre?"

"They are very fine, but they dive deep into life, and life contains much sad and mournful things."

"Oh! but I do not picture ourselves for them, then?"

"Not too soon, I think. I am really sure that if you were to read Emilia's books, and yet you would regret it."

"Why not, mother?"

"Don't you think you can trust me to judge for you in this matter, little girl? I—I am almost certain that Emilia herself would think as I do."

* HICHENS IN HARTLEY'S WEEKLY, No. 257.

C. J. MOORE, 10, N. HARTLEY & PUBLISHERS.

It was not without an effort, a strong effort, that Hermione was able to speak the last sentence. Vere came nearer to her mother, and stood before her, as if she were going to say something that was decisive or important. But she hesitated.

"What is it, Vere?" Hermione asked, quietly.

"I might learn from life itself what Monsieur Emile's books might teach me."

"Some day. And when that time comes neither I nor he would wish to keep them out of your hands."

"I see. Well, madre dear, let us read whatever you like."

Vere had been on the edge of telling her mother about the previous night and Peppina. But, somehow, at the last moment she could not.

And thus, for the moment at least, Artio and she shared another secret of which Hermione was unaware.

But very soon Hermione asked that Vere was specially kind always to Peppina. They did not meet, perhaps, very often, but when by chance they did Vere spoke to the disguised girl with a gentleness, almost a tenderness, that was striking.

"You like Peppina, Vere?" asked her mother one day.

"Yes, because I pity her so much."

There was a sound that was almost like passion in the girl's voice; and, looking up, Hermione saw that her eyes were full of light, as if the spirit had set two lamps in them.

"It is strange," Vere continued, in a quieter tone; "but sometimes I feel as if on the night of the storm I had had a sort of consciousness of her coming—as if, when I saw the saint's light shining, and bent down to the water and made the sign of the cross, I already knew something of Peppina's wound, as if I made the sign to protect our Casa del Mare, in ward of something evil."

"That was coming to us with Peppina, do you mean?"

"I don't know, madre."

"Are you thinking of Giulia's foolish words about the evil eye?"

"No. It's all vague, madre. But Peppina's cross sometimes seems to me to be a sick, a warning come into the house."

When I see it it seems to me there is a cross to be borne by some one here, by one of us.

"How imaginative you are!"

"So are you, madre! But you try to hide it from me."

Hermione was startled. She took Vere's hand, and held it for a moment in silence, pressing it with a force that was serene. And her luminous, expressive eyes, immovably sensitive, beautiful in their sensitiveness, showed that she was moved. At last she said:

"Perhaps that is true. Yes, I suppose it is."

"Why do you try to hide it?"

"I suppose—I think because—because it has brought to me a great deal of pain. And what we hide from others we sometimes seem almost to be destroying by that very act, though of course we are not."

"No. But I think I should like to encourage my imagination."

"Do you encourage it?" the mother asked, looking at her closely.

Again, as Vere had been on the edge of telling her mother all she knew about Peppina, she was on the edge of telling her about the poems of the sea. And again, moved by some sudden, obstinate reluctance, come she knew not why, she withheld the words that were almost on her lips.

And each time the mother was aware of something avoided, of an impulse stifled and therefore of a secret deliberately kept. The first time Hermione had not allowed her knowledge to appear. But on this second occasion for a moment she lost control of her will, and now, after a perceptible pause, Vere said, "I know I love it," and was silent, she exclaimed:

"Keep your secrets, Vere. Every one has a right to their freedom."

"But, madre—" Vere began, startled by her mother's abrupt vehemence.

"No, Vere, not. My child, my dearest one, never tell me anything but of your own soul, out of your own heart and desire. Show a confidence as beautiful. But anything else—anything else, I could not learn from you."

And she got up and left the room, walking with a strange shyness, as if she put upon herself an embargo not to listen.

The words and—especially that—the way in which they were

spoken made Vere suddenly and completely aware of something that perhaps she had already latently known—that the relation between her mother and herself had, of late, not been quite what once it was. At moments she had felt almost shy of her mother, only at moments. Formerly she had always told her mother everything, and had spoken—as her mother had just said—out of her own heart and desire, with eagerness, inevitably. Now—well, now she could not always do that. Was it because she was growing older? Children are immensely frank. She had been a child. But now—she thought of the Marchesini, of Peppina, of her conversation with Monsieur Emile in the streets of Virginia, and she realized the blooming of her girlhood, was aware that she was changing. And she felt half frightened, then eager, ardently eager. An impulse filled her, the impulse towards a fullness of life that, till now, she had not known. And for a moment she loved those little, innocent secrets that she kept.

But then she thought again of her mother, the most beloved of all her world. There had been in her mother's voice a sound of tragedy.

Vere stood for a long while by the window thinking.

The day was very hot. She longed to bathe, to wash away certain perplexities that troubled her in the sea. But Gaspare was not on the island. He had gone—she knew not where on some errand for her mother.

She looked at the sea with longing. When would Gaspare be back? Well, at least she could go out in the small boat. Then she would be near to the water. She ran down the steps

startled. At first she saw only a small inlet of the sea containing the Saint's Pool, and then leaned back against the white cushions, and looked up at the blue sky, and let her hand trail in the water. But she was restless to-day. The Pool did not soothe her, and she began to paddle out along the coast towards Naples. She passed a ruined, wind-swept house named by the fishermen, "The Palace of the Spirits," and then a tiny

Saraceni climbing up from a minute harbor to an antique church. Children ran out to her. A fisherman shouted "Buen viaggio, signorina!" She waved her hand to them

apathetically and rowed slowly on. Now she had a leisurely

little farther on there was a small inlet of the sea containing two caves, not gloomy and

inspiring like the Grotto of Virgilio, but cozy, shady and serene. Into the first of these

she ran the boat until its prow touched the sandy bottom. Then she lay down at full length, with her hands behind

her head on the cushions, and thought—and thought.

Figures passed through her mind, a caravan of figures travelling as all are travelling; her mother, Gaspare, Giulia

with her plump and earnest face, Monsieur Emile, to whom she had drawn so pleasantly,

intermingling near to these last days, the Marchesini—starting from the hips, and making his bold eyes round—Peppina,

Ruffo. They went by and returned, gathered about her, separated, melted away as people

do in our mindages. Her eyes were fixed on the low roof of the cave. The bit of the water seemed to rock her soul in a cradle. "Madre—Ruffo; madre—Ruffo!" The words were in her mind like a refrain. And then the oddity, the promiscuity of life struck her. How many differences there were in this small group of people by whom she was surrounded. What

would their fate be, and hers? Would her life be larger? She did not feel afraid. Youth ran in her veins. That—would it be? She saw the red cross on Peppina's cheek. Why was one singled out for misery, another for joy? Which would be her fate? Ruffo seemed to be standing near her. She had seen him several times in these last days, but only at evening, fugitively, when he came in the boat with the fishermen. He was stranger now. He had mistled her eagerly. She had spoken to him from the shore. But he had not landed again on the island. She felt as if she saw his bright

and burning eyes. And Ruffo—would he be happy? She hoped so. She wanted him to be happy. He was once a dear, active, bold boy—such a real boy. What must it be like to have a brother? Gaspare approved of Ruffo now, she thought; and Gaspare did not like everybody, and was fearfully blunt in expressing his opinion. She loved his bluntness. How delightfully has now

twisted when he was pleased! Dear old Gaspare! She could

She was speaking vehemently to Ruffo

never felt afraid of anything or anybody when he was near. Monsieur Emile—the pensive—the Marquisine singing. She closed her eyes to think the better.

"Signorina! signorina!"

Vere woke and sat up.

"Signorina!"

Gaspere was looking at her from his boat.

"Gaspere!"

She began to realize things.

"I once—I was thinking."

"So, signorina, I always think like that when I am in bed."

She laughed. She was wide awake now.

"How did you find me?"

"I met one of the fishermen. He had seen you row into the cove."

"Oh!"

She looked at him more steadily. His brown hair was hot. Perspiration stood on his forehead just under the thick and waving hair.

"Where have you been, Gaspere? Not to Naples in all this heat?"

"I have been to Mergellina, signorina."

"Mergellina? Did you see Ruffo?"

"So, signorina."

There was something very odd about Gaspere to-day. Vere thought. Or was she still not thoroughly awake? His eyes looked excited, surely, as if something unusual had been happening. And they were fixed upon her face with a searching that was strange, almost as if he saw her now for the first time.

"What is it, Gaspere? Why do you look at me like that?"

Gaspere turned his eyes away.

"Like what, signorina? Why should I not look at you?"

"What have you been doing at Mergellina?"

She spoke rather impudently.

"Nothing particular, signorina."

"Oh!"

She paused, but he did not speak.

"Where did you see Ruffo?"

"At the harbor, signorina."

"Tell me, Gaspere, do you like him?"

"Ruffo?"

"Yes."

"I do not dislike him, signorina. He has never done me any harm."

"Of course not. Why should he?"

"I say—he has not."

"I like Ruffo."

"So do I."

Again he looked at her with that curious expression in his eyes.

Then he said:

"Come, signorina! It is getting late. We must go to the island."

And they pulled out round the point to the open sea.

During the hot weather the dwellers in the Casa dei Mare made the siesta after the midday meal. The windows and blinds were drawn. Silence reigned, and the house was still as the Palace of the Sleeping Beauty. At the foot of the cliff the sea slept in the smokiness, and it was almost an empty sea, for few boats passed by in these hot still hours.

To-day the servants were quiet in their quarters. Only Gaspere was outside. And he, in short and trousers, with a white linen hat covering his brown face, was stretched under the dead trees of the little garden, under the shadow of the wall, resting profoundly after the labors of the morning. In their respective rooms Bernierie and Vere were seated behind shut doors. Bernierie was lying down but not sleeping. Vere was not lying down, tensely she slept at this time for an hour. But to-day, perhaps because of her nap in the cave, she had no desire for sleep.

She was thinking about her mother. And Hermione was thinking of her. Each mind was working in the midst of its desert space, its solitude eternal.

What was growing up between them, and why was it growing?

Hermione was beset by a strange sensation of impotence. She felt as if her child were drifting from her. Was it her fault, or was it no one's, and inevitable? But Vere had been able to divine certain feelings in her, the mother, obscure pains of the soul that had travelled to mind and heart? She did not think it possible. Nor had it been possible for her to kill those pains, although she had made her efforts to conceal them. Long ago, before she was married to Maurice, Emile had spoken to them of jealousy. At the time she had not understood it. She remembered thinking, even saying, that she could not be jealous.

But then she had had a child!

Lately she had realized that there were forces in her of which she had not been aware. She had realized her passion for her child. Was it strange that she had not always known how deep and strong it was? Her mutilated life was more vehemently centered upon Vere than she had understood. If Vere she could be jealous. If Vere put any one before her, trusted any one more than her, confided anything to another rather than to her, she could be frightfully jealous.

Recently she had suspected—she had imagined.

Recklessly she moved on her bed. A mosquito curtain protected it. She was glad of that as if it kept out prying eyes. For sometimes she was ashamed of the volubility within her. She thought of her friend Emile when she had dragged him from death.

He, too, had been so delirious a little from her in these last days? It seemed to her that it was so. She knew that it was so. Women

are so sure of certain things, more almost than men are ever sure of anything. And why should Vere have drifted, Emile have drifted, if there were not some link between them—some link between the child and the middle-aged man which they would not have lost know of?

Vere had told to Emile something that she had kept, that she still kept from her mother. When Vere had been shut up in her room she had not been reading. Emile knew what it was that she did during those long hours when she was alone. Emile knew that, and perhaps other things of Vere that she, Hermione, did not know, was not allowed to know.

Hermione, in their long infirmity, had learned to read Arctis more clearly, more certainly than he realized. Although often impulsive, and seemingly unconscious of the thoughts of others, she could be both sharply observant and subtle, especially with those she loved. She had noticed the difference between her manner when first they spoke of Vere's hidden occupation and his manner when last they spoke of it. In the interval he had found out what it was, and that it was not reading. Of that she was positive. She was positive also that he did not wish her to suspect this. Vere must have told him what it was.

It was characteristic of Hermione that at this moment she was free from any common curiosity as to what it was that Vere did during those many hours when she was shut up in her room. The thing that hurt her, that seemed to humiliate her, was that Emile should know what it was, and not she, that Vere should have told him what she had not told her.

As she lay there she covered under the blue a mental silence can give, and something woke up in her, something fier, something surely that could not be with violence. It startled her, almost as a stranger rushing into her room would have startled her.

For a moment she thought of her child and her loved friend with a bitterness that was cruel.

How long had they shared their secret? She wondered, and began to consider the recent days, searching their hours for those tiny incidents, those small reticences, avoidances, that to women are revelations. When had she first noticed a slight change in Emile's manner to her? When had Vere and he first seemed a little more intimate, a little more confidential than before? When had she, Hermione, first felt a little "out of it," not perfectly at ease with these two dear destroyers of her life?

Her mind fastened at once upon the day of the storm. On the night of the storm, when she and Emile had been left alone in the restaurant, she had felt almost afraid of him. But before then, in the afternoon on the island, there had been something. They had not been always at ease. She had been conscious of trying to tide over moments that were almost awkward—once or twice, only once or twice. But that was the day. Her woman's instinct told her so. That was the day on which Vere had told Emile the secret she had kept from her mother. How excited Vere had been, almost feverishly excited? And Emile had been very strange. When the Marquisine and Vere went out upon the terrace how restless, how irritable he—

Suddenly Hermione sat up in bed. The heat, the stillness, the white cage of the mosquito net, the silence, had become intolerable to her. She pulled aside the net. Yes, that was better. She felt more free. She would lie down outside the net. But the pillow was hot. She turned it, but its pressure against her cheek almost maddened her, and she got up, went across the room to the wash-hand stand and bathed her face with cold water. Then she put some cold water on her forehead, opened a drawer and drew out a fan, went over to an arm-chair near the window and sat down in it.

What had Emile written in the visitors' book at the Scoglio di Friso? With a strange alarm, with a slight that was instinctive as that of a homing pigeon, Hermione's mind went to that book as to a book of revelation. Just before he wrote he had been feeling nettled—something. She had been aware of that at the time. He had not wanted to write. And then suddenly, almost violently, he had written and had closed the book.

She longed to open that book now, at once, to read what he had written. She felt as if it would tell her very much. There was no reason why she should not read it. The book was one that all might see, was kept to be looked over by any chance visitor. She would go one day, one evening, one moment and see what Emile had written. He would not mind. If she had asked him that night of course he would have shown her the words. But she had not asked him. She had been almost afraid of things that night. She remembered how the wind had blown up the white sailcloth, her cold momentary shiver of fear, her relief when she had seen Gaspere walking steadily into the room.

And now, at once, this thought of Gaspere brought to her a sense of relief again, of relief so great, so sharp—pleasing down the very deep of her nature—that by it she was able to measure something, her inward desolation at this moment. Yes, she clung to Gaspere, because he was loyal, because he loved her, because he had loved Maurice—but also because she was terribly alone.

Because he had loved Maurice! But there was a time, really a time, when she had possessed one who belonged utterly to herself, who lived only in aid for her? Was that possible? To-day, with a bitterness of one starving, she instead with this memory, her memory, hers only, shared by no one, never shared by living or dead. That at least she had, and that could never be taken from her. Even if Vere, her child, slipped from her, if Emile, her friend, her life she had saved, slipped from her, the memory of her sacrifice was hers, the memory of her love, his put in her by her mutual life. His last kiss. Long ago she had taken that kiss as a

(Continued on page 28)

The Higher Athleticism

(Continued from page 15.)

attractive—like that professor who revised three ancient gospels to teach Greek history with. Besides, it's only when a fellow goes in strong for athletics he gets to be an all-around student. When he falls down in one set of studies, the athletic management switches him to another; or else he changes to colleges offering more inducements. I know one insider what's had the first act of six different professions; and he's liable to pick up several more before he reaches his time limit. Then he'll have to get on some periodical team, or make a honest livin', which he'll stand a better chance doing, 'cos in that line of ampie college de-gress lurkin' in his system."

"But such conditions must interfere de-structively with thoroughness," objected the Student.

"Conditions is something free," admitted Turkey, easily. "Take the Bill Sims. He was a moolah in a store laundry, an' suddenly caught the bug to get an education. He was so thick-headed that he'd never passed the entrance exams of the athletic manager, hadn't spotted him 'n' expunged him out for centre guard. After he'd won glory for the college a short while, by takin' various special courses, he'd piled up so many conditions there was another for it but put him in the Theological Seminary to keep him on the team. He'd 'a' been a thoroughbred athlete if he hadn't been free that. He went an' got religion over there an' started in strong to fit himself for a foreign missionary to China. He dropped off some in form from studyin' too hard, but at that, the athletic trainin' he was gettin' would make him a peach of a missionary. Bill could of put down a boxer aprisin' all by himself. Say, the government would save money if they'd put a law that all missionaries has got to have athletic trainin'. . . . Trouble was a lot of highbrows got around Bill and persuaded him that he's such a fine organizer he must take the job of secretary in the main missionary office in New York. Now there he sits rattin' out his heart thinkin' every day of the good times he might have had in China, while his many form is gradually growin' staid."

"I think if you see point, paper," said the Student, hesitatingly. "It is better to get over education than none at all; and if I suppose, to many poor young men whose only asset is their physical prowess, college athletics furnish the means of fitting themselves for after life better than would otherwise have been possible."

"Sure," agreed Turkey, "plenty of 'em. I know four or five strongmen in the Tammany districts what's makin' good at law. They got strong puttin' their father's whipped into line, which counts in police courts. Also they got persuasive methods that scares witnesses from goin' too strong agin' their clients. Same way in medicine, I hear ten fellows we got agin' how they was paid to use their education. They're from towns in Tennessee what's gone dry. They calculate there's a fortune waitin' for any doctor that goes to their sufferin' communities and makes a specialty of writin' loose prescriptions."

The Student's look of horror was interrupted by a fainter of cheering from the field, marking the beginning of the game. And, with apoplexy, Turkey seized two barrels of cultural water and led us to our reflections.

The Magic That Aids War

The vital importance of the signal corps of an army will be readily appreciated by any one who realizes that that corps is at once the eye, the ear, and the voice of the army. A good interesting history of the great amount of energy and ingenuity expended in developing the Signal Corps of the United States, story to its present high state of efficiency will be found in a collection of papers read before the Military Service Institution of the United States by Lieutenant Colonel George P. Service, Signal Corps, U.S.A., and now published as book form

by the direction of the Chief Signal Officer of the army, under the title, *The Transmission of Military Information*. The book affords an excellent guide for the layman who would learn of the work of the Signal Corps, and is full of useful information for National Guardsmen.

The electric telegraph, says the author, is even more serviceable in war than in the pursuits of peace. "If proof of this value is necessary," he adds, "we have only to recall Shafter's communication at a critical moment with the White House from the field at Santiago, or the extent of Kuroki's fighting line made possible by electricity."

The meteoric success of Japan, which seems to have been due to a combination of highest intellect in the few with brute fighting power in the many, troubles various persons, and the least important of which is the extraordinary value of modern lines of military intelligence. In this war, so important did the transmission of intelligence become that it is said of the great Japanese general, Kuroki, the sound which interested him most was not that of firing, but the click of the telegraph instrument which left nothing to the distant vision, but told him exactly what each unit was doing."

From wiretapping and the mounted newspaper galloping off with written orders, to the modern field telegraph and the wireless telegraph and wireless telephone, is a great step forward; yet, in spite of the improvements in signal service due to scientific advancement it is still unsafe to abolish the primitive means of communication. The danger of relying upon any system is shown by General Sir Hamilton's report that the Japanese "First Army has been entirely cut off from all communication with Oryon and the Second and Fourth Armies from yesterday night until only a few minutes ago. The wires were cut, as it was only natural to suppose they would be cut, and then the Japanese armies, separated by only twenty miles of mountainous country, were unable, although it was a brilliant sunny day, to talk to one another."

This is rough on the First Army, which has shed its blood too freely in the first belief that it was lagging behind in the great pursuit, and could not comprehend why, when pressing on its duty, the enemy's retreat, it should have found itself so suddenly on the very brink of destruction. A down British soldier with a couple of biographies would today have saved the Japanese many hundreds of lives and were wrong in attempting the impossible.

Curious, is it not, that the Japanese with all their zeal for the art of war and their enthusiastic adoption of its most improved methods and apparatus, should have been blind to such an important asset as a secondary means of communication. Lieutenant Colonel Neelken is sure that "the best means of transmitting information in the field is the wire telegraph; which alone, while it exists unimpaired, has verities, accuracy, speed, and, as a rule, suitability for its work except when it cannot be extended to its objective. Great progress has been made by the wireless telegraph and telephone and many hopes are based upon their use, the possibilities are vast, but they are not yet defined to conservative minds, and at least in war the wireless still remains in theory as in practice—in the air."

The author tells at length of the wonderful work with which isolated military telegraph lines can be laid. Imagine a trained signaller, trotting his horse at a smart pace, snatching wire as he goes and retransmitting as he goes with headquarters by means of a buzzer (consisting of telephone with telegraph key) the mutual horseless manœuvre forming the necessary ground-wire connection! Note also that at the battle of Mukden the Third Japanese Army laid 133 miles of field-telegraph line during the battle!

The book opens a vista in which the layman discovers some of the marvellous achievements of the signal corps in modern warfare. It is cheering to read that our own corps is the best in the world, and it will be evident to any one who reads the book that there is urgent need for an increase in the number of officers and non-commissioned included in this branch of the service.

Berlin's Dwarf Postal Railway

The German post-office department has put forward a scheme to connect the general post-office in that city with the various branch offices by the construction of an underground electric railway, by means of which the more rapid distribution of the mail bags to and from the mail trains will be effected at a speed of about twenty-five miles an hour. The railway will be worked without a guard or driver, and the tunnel, which will be placed close beneath the road surface, is to be only twenty-nine inches in height by seventy-one inches in width. Each truck or car is intended for the conveyance of a large-sized mail bag. The complete train will be composed of a dwarf electric locomotive and not more than four trucks. The locomotive will have a pair of axles, each furnished with a motor, and the line will be double track throughout, constructed on a 10.13-inch gauge. Over each track will be conductor rails. A track will be provided between the two lines of rails, so that a man will be able to pass through the tunnel.

Sad Sign of the Times

A REPEATABLE New Yorker, recently returned from Chicago, says that the saddest thing he saw in that metropolis was a fine, respectable, old-fashioned house, facing the lake front on Clark Street, where the broad front door in tall gold letters is the inscription, "Optimists' Club." Equally prominent in the display of placards marked "To Let"—a sad sign of the times.

A Master of Time

It was the day of the ball game, and Willie, the office boy, approached the head of the firm, and stammered, "If you please, sir—"

"I have, hurry up!" said his employer.

"If you have anything to say, say it. Don't take half a day."

"But that's just what I was going to ask you if I could take," said Willie.

A SPIRIT IN PRISON

(Continued from page 26.)

gift made to two—her and to Vere alone. To-day, almost savagely, she took it to herself alone, herself—alone. Here it was, hers only, no part of it Vere's.

That she had—her memory, and Giuseppe's loyal, open-hearted devotion. He knew what she had suffered. He loved her as he had loved his dead patroness. He would always protect her, put her first without hesitation, reveal nothing from her that it was her right—for solely even the humblest, the least selfish, the least grasping, surely all who love have their rights—that it was her right to know.

Her cheeks were burning. She felt like one who had been making some physical exertion.

Deeply silent was the house. Her room was full of shadows, yet full of the hidden presence of the sun. There was a glory outside, against which she was protected. But inside, and against assaults that were ignominious, what protection had she? Her own personality must protect her, her own will, the determination, the strength, the courage that belong to all who are worth anything in the world. And she called upon herself. And it seemed to her that there was no voice that answered.

That was a hideous moment of drama.

She sat there quietly in her chair in the pretty room. And she called again, and she listened—and again there was silence. Then she was afraid. She had a strange and horrible feeling that she was deserted by herself, by that which, at least, had been herself and on which she had been accustomed to rely. And what was left was surely utterly meagre, full of the flabby wickedness that seems to dwell in weakness. It seemed to her that if any one who knew her well, if Vere, Emile, or even Giuseppe, had come into the room just then, the intruder would have paused on the threshold, amazed to see a stranger there. She felt afraid to be seen and yet afraid to remain alone. Should she do something definite, something defiant, to prove to herself that she had will and could overcome it?

She got up, resolved to go to Vere. When she was there, with her child, she did not know what she was going to do. She had said to Vere, "Keep your secrets." What if she went now and humbled herself, explained to the child quite simply and frankly a mother's jealousy, a widow's grief, or even Giuseppe, had come into the room just then, the intruder would have paused on the threshold, amazed to see a stranger there. She felt afraid to be seen and yet afraid to remain alone. Should she do something definite, something defiant, to prove to herself that she had will and could overcome it?

She heard a light step outside and drew back from the door. The step passed on and died away down the paved staircase. Vere had gone out to the terrace, the garden, or the sea.

Hermione again moved forward, then stopped abruptly. Her face was suddenly flushed with fear, as she realized that she had been going to do, she who had exclaimed that every one has a right to their freedom.

For an instant she had meant to go to Vere's room, to try to find out surreptitiously what Emile knew.

A moment later Vere, coming back swiftly for a pencil she had forgotten, heard the sharp grating of a key in the lock of her mother's door.

She ran on lightly, wondering why her mother was looking herself in, and against whom.

CHAPTER XVIII

During the last days Artios had not been to the island, nor had he seen the Marchese. A sudden passion for work had seized him. Since the night of Vere's meeting with Poppino his brain had been in flood with thoughts. He often awoke alone upon the creative artist, reproaching or encouraging his instinct to bring forth, depressing or exulting him when, perhaps, he expects it least. The passing incidents of life frequently have their hidden, their unsuspected part in determining his activities. So it was now with Artios. He had given an impetus to Vere. That was natural, to be surprised considering his knowledge and his facts and his great experience, and his understanding of men. But now Vere had given an impetus to him—and that was surely stranger. Since the conversation among the shadows of the cave, after the vision of the moving men of darkness and of fire, since the sound of Poppino's sobbing in the night, and the sight of her passionate face lifted to show his gashed cross to Vere, Artios's brain and heart had been alive with a fury of energy that fiercely summoned him to work, that held him working. He even felt within him something that was like a renewal of some part of his vanished youth, and remembered old days of student life, nights in the Quarter Latin, his distant as he recalled the papers, the sensation of joy with which he saw his first article in the *Florence*, his dreams of fame, his hopes of love, his baptism of sentiment. How he had worked in those days and nights! How he had learned experience in the streets and the byways of the great city! How passionately and yet how calmly he considered his knowledge and his facts, not only by their quick emotions, but also by the something watched and digged underneath, that will not be swept away, that is like a detective hidden by a house dove to spy out all the corners in the night. Something, some breath from the former days, swept over him again. In his ears there sounded early the cries of Paris, urging him to the assault of the barricade of Fame, and he sat down, and he worked with the vigorous energy, with the pulsing eagerness of one of "les jeunes." Hour after hour he worked. He took coffee, and wrote through the night. He slept when the dawn came, got up, and looked again.

He shut out the real world and he forgot it—until the fit was past. And then he pushed away his paper, he laid down his pen, he stretched himself, and he knew that his great effort had tired him tremendously—tremendously.

He looked at his right hand. It was cramped. As he held it up he saw that it was shaking. He had drunk a great deal of black coffee during those days, had drunk it recklessly as to the days of youth, when he cared nothing about health because he felt made of iron.

"Pfui!"

And so there was Naples outside, the waters of the bay dancing in the sunshine of the bright summer afternoon; people bathing and showing to one another from the diving platforms and the balconies, people mulling by in the little carriages to eat system at Posillipo. Lazy, leechlike, pleasure-loving wretches! He thought of Doro as he looked at them.

He had given strict orders that he was not to be disturbed while he was at work, unless *hermione* came. And he had not once been disturbed. Now he rang the bell. An Italian waiter, with crooked eyes and a fair beard, stepped softly in.

"Has any one been to see me? Has any one asked for me lately?" he said. "And go down, tell you, and inquire of the concierge."

The waiter departed and returned to say that no one had been for the signor.

"Not the Marchese Federico Panseri?"

"The concierge says that no one has been, signore."

"Va bene."

The man went out.

So Doro had not come even once! Perhaps he was seriously offended. At their last parting in the Villa he had shown a certain irony that had in it a hint of bitterness. Artios did not know of the fisherman's information, that Doro had guessed who was Vere's companion that night upon the sea. He supposed that his friend was angry because he believed himself disgraced. Well, that was not so, he was just right. He thought of the Marchese now with lightness, as the worker who has just made a great and prolonged effort is inclined to think of the laudatory idler. Doro was like a feather on the warm wind of the south. He, Artios, was not in the mood just then to bother about a feather. Still less was he inclined for companionship. He wanted some hours of complete rest out in the air, with gay and frivolous scenes before his eyes.

He wanted to look on, but not to join in, the merry life that was about him, and that for so long a time he had almost violently ignored.

He resolved to take a carriage, drive slowly to Posillipo, and eat his dinner there in some airy above the sea; watching the pagoda that unfolded itself on the evenings of summer about the restaurant and the outdoor, round the stalls of the vendors of fruit and meat, and the piano-organs, to the accompaniment of which impudent men sang in the sunny, dark-eyed beauties posed upon balconies or gathered in knots upon the little terraces that dominate the bathing establishments, and the distant traffic of the bay. His brain longed for rest, but it longed also for the hum and the stir of men. His heart hated for the sight of pleasure, and must be appeased.

Catching up his hat, almost with the hasty eagerness of a boy, he went downstairs. On the opposite side of the road was a smart little carriage in which the coachman was asleep, with his legs crossed up on the driver's seat, displaying a pair of startling orange and black socks. My socks Artios knew his man.

"Poppino! Poppino!" he cried.

The coachman sprang up, showing a round, rosy face, and a pair of shrewd, rather small dark eyes.

"Take me to Posillipo."

"Si, signore."

Poppino cracked his whip vigorously.

"Ah-ah! Ah-ah!" he cried to his gayly bedimmed little horse, who were a long feather on his back, flanked by bunches of artificial roses.

"Not too fast, Poppino. I am in no hurry. Keep along by the sea."

The coachman let the reins go loose, and instantly the little horse went slowly, as if all his spirit and agility had suddenly been withdrawn from him.

"I have not seen you for several days, signore. Have you been well?"

Poppino had turned quite round on his box, and was facing his client.

"No, I've been working."

"Si?"

Poppino made a noise, as he nearly always did when he heard a rich signore speak of working.

"And you? You have been spending money as usual. All your clothes are new."

Poppino smiled, showing rows of splendid teeth under his little curled-up mustaches.

"My signore, all? And I have also new underclothing."

"Per Barco!"

"Ecco, signore!"

He pulled his trousers up to his knees, showing a pair of pale blue drawers.

"My signore—these are new, signore!" He drew attention to the striped elastic that kept the orange and black socks in place.

"My boots!" He put his feet up on the box that Artios might see his brown polished boots, then unlatched and threw open his waistcoat.

"My shirt is new! My cravat is new! Look at the pin!" He fastened his plump, brown, and carefully washed hands.

"I have a new sign. He bent his head. "My hat is new."

Artios broke into a roar of laughter that seemed to do him good after his days of work.

"You young dandy! And where do you get the money?"

(Continued on page 29.)

The Flea and the Fleet

By Jane Marsh Parker

THUSMAN what vast realms of terrestrial space exploring and over what boundless seas the aqueous wastes inquiring shall the worker after truth journey in quest of the exalted, the veritable bond of sympathy, between the dead and the fleet? Is there, then, no affinity, some tie of sympathy? No! Scientist answers yes to the question; give grave reasons therefore. And no long quest is needed to find confirmation thereof. Indeed, if we may credit the findings of pathologists and bacteriologists, our great first went out from the Atlantic to the Pacific by way of the Gulf Stream, and left ship under the nose of the overboard thriest, left to carry on a war of extermination against the flies. It is impossible to believe that so gigantic an argument, so mighty a collection of ships and guns and men, went down against such a tiny foe! Pray attend.

That Robinson Crusoe was never written for the entertainment of adventure-loving boys, but as a warning to sinners, is but another proof of the truth of Herbert Spencer's statement—that results anticipated are always sure to be greatly exceeded by results not anticipated. And now we have the Pacific Squadron for another case in point, in its recent achievement of an unsought and unanticipated victory—a victory of which Admiral Exton is still in ignorance.

It is an small thing to have demonstrated, but he has been instrumental in doing, thus, the flea may be wonderfully expressed, if not wholly exterminated, and that in the most desolate of cities—San Francisco. Unlucky plague had obtained some small foothold in the city, only a few cases, but enough, if not properly treated, the little fleas far in the end, not daring to enter the Golden Gate. The plague bacillus lives in that of various breeds who have long Latin names and wicked habits, and they come and travel on the rats that sail in sundry ships from all parts of the world, San Francisco, and there infect the native rats. The rats, of course, do not hop in swarms upon humanity, and with their bites convey the plague poison. But the fleas follow, which the rats are dotted are given to man, and thus will estimate the proportion of flea to rat.

Now, good Californians ignore the existence of the flea. "Ah, no; we never mention him." That is the unpardonable offense of the disgruntled tourist, the stranger with his camera.

Bricks were the inviolable armor, salting mechanically from Hampton Roads, with San Francisco its objective point. Bohold also, if the tax be not too great for culinary imagination, the channel of the Golden Gate mined and blockaded against those battlements by the men killing plague-flea. It was this, the most important of the nationalities that carried the flea that spread the plague that had leared. . . . And now, if the war against the rats goes on to the deadly finish, as it promises to do since the women of San Francisco are enlisting by clubs, etc., in a movement to have the rats—never fleas, remember!—by the throat. . . . The Golden Gate the last vestige of danger from Asiatic plague will have disappeared, and those of our Minneapolis who have accompanied in San Francisco before may miss delightfully the dominant feature of the city. . . . It is a far better time, thanks to the slaughter of the thousands upon thousands of rats.

"There is no use in fighting fire" has been the fixed conviction of Californians heretofore; "getting used to 'em is the only remedy. When London makes an end of its fires, New Jersey of its mosquitoes, and Egypt of its fleas, we will think about fighting 'em." But now, after successfully enduring a drought, a locust plague, and a cholera epidemic, California is being visited by several illnesses at least—if not trillions—will San Francisco admit that the warlike was not in vain, and that, in a way, the destruction of the pestiferous rat has been a promoter of good? It may come in time, but view of the subject, but hardly in this age. Future generations of Native American daughters will know only by tradition of the Spartan sufferings of their ancestors.

(Continued from page 28.)

Pasquale looked doubtful and hung his head.

"Signore, I am in error. But I say to myself, 'Thank the Madonna, I have a rich and generous patroness who wishes his consolation to be chief. When he sees my clothes he will be contented, and—who knows what he will do!'"

"Per Bacco! And who is this rich and generous signora?"

"Ah!" Pasquale impatiently flung out the ragged hand that was not holding the reins—"Ma!—you, signore."

"You young rascal! Turn round and attend to your driving!"

But Artio laughed again. The impudent boyishness of Pasquale, and his childish passion for fancy, were refreshing, and seemed to belong to a young and thoughtless world. The sea breeze was soft as silk, the afternoon sunshine was delicately brilliant. The bay looked as it often does in summer—like radiant liberty held in happy arms, alluring, full of promises. And a physical well-being invaded Artio such as he had not known since the day when he had been with Verre upon the island.

He had loved to live. Now the gates were thrown open, and to what a brilliant world! He flung forth into it with almost joyous expectation.

They went slowly, and presently drew near to the Rotonda. Artio found a little forward and saw that the fishermen were at work. They stood in lines upon the pavement, pulling at the immense nets which were still a long way out at sea. When the carriage reached them Artio told Pasquale to draw up, and sat watching the work, and the fierce energy of the workers. Half naked, with arms and legs and chests that gleamed in the sun like copper, they inhaled, leaning backward, one towards another, laughing, shouting, swearing with a sort of almost angry joy. In their eyes there was a carelessness that was wild, in their postures a lack of self-consciousness that was savage. But they looked like creatures who must live forever. And to Artio, solitary for so long, the sight of them brought a feeling almost of triumph, but also a sensation of envy. Their vigor made him pine for movement.

"Drive on slowly, Pasquale," he said. "I will follow you on foot, and join you at the hill."

"Ah, signore."

He got out, stood for a moment, then stroiled on towards the Meriggiana. As he approached this part of the town, with its harbor and its population of fisherfolk, the thought of Ruffo came into his mind. He remembered that Ruffo lived here. Perhaps he might see the boy this afternoon.

On the mole that serves as a slight barrier between the open sea and the snug little harbor several boys are fishing. Others were bathing, leaping into the water with shouts from the rocks. Beyond, upon the slope of dirty sand among the draw-up boats, children were playing, the girls generally separated from the boys. Fishermen, in woollen shirts and white linen trousers, sat smoking in the shadow of their craft, or leaned muscular arms upon their standing at ease, staring into vacancy or talking to each other. On the still water there was a perpetual movement of boats; and from the distance came a dull but continuous roar, the rattle and the laughter of hundreds of bathers at the Stabilimento di Bagno beyond the opposite limit of the harbor.

Artio enjoyed the open air, the freedom of the breeze; and once again, as often before, found himself thinking that the outdoor life, the life known from former restrictions, was the only one really and fully worth living. There was a carelessness, a camaraderie among these people that was of the essence of humanity. Despite their frequent quarrels, their intrigues, their betrayals, their vendettas, they lived together. There was a true and vital companionship among them.

He passed on with deliberation, observing closely, yet half lazily—for his brain was slack and needed rest—the different types about him, musing on the possibilities of their lives, smiling at the gambols of the infant girls, and the impudent frolics of the little boys who seemed the very spawn of sand and sea and sun, till he had nearly passed the harbor and was opposite to the path-way that leads down to the jetty, to the left of which lie the steam yachts.

At the entrance to this pathway there is always a knot of people gathered about the shanty and the seats, and an unceasing flow of strange moans, and the stands where shell-fish are exposed for sale. On the far side of the tramway, beneath the tall houses which are let out in rooms and apartments for families, there is an open space, and here in summer are set out quantities of strong tables, at which from noon till late in the evening the people of Meriggiana, and visitors of the humbler classes from Naples, sit in merry throngs, eating, smoking, drinking coffee, syrups, and red and white wine.

Artio stood still for a minute to watch them, to partake from a distance, and unknown to them, in their belated party. He had in a big sign, and peered at it as his eyes roved, for he was to group, resting now on a family party, seen on a quarter of lovers, now on two stout men solemnly trying to drive a brawny old vigorous rhetoric and emphatic gestures, now on an elderly woman in a shawl spreading an hour with her soldier in a shawl sitting, now on some sailors from a ship in the distant port for the arsenal bent over a game of cards, or a party of workmen talking wages or politics in their shirt sleeves with flowers above their ears.

What a row they made, these people! Their animation was almost like the animals of a night-herd. Some were ugly, some looked wicked; others melancholic, sympathetic, coarse, artful, sometimes boldly defiant, or indolently revolted, but however much they differed, in one quality they were nearly all alike. They nearly all looked vivid. If they talked anything, at least it was not life. Even their silence was exuberant.

As this thought came into his mind Artio's eyes changed to a

on two people sitting a little apart at a table on which stood a coffee-cup, a thick glass half full of red wine, and a couple of tumblers of water. One was a woman, the other—yes, the other was Ruffo.

When Artio realized this he kept his eyes upon them. He forgot his interest in the crowd.

At first he could only see Ruffo's side-face. But the woman was exactly opposite to him.

She was neatly dressed in some dark stuff, and wore a thin shawl, purple in color, over her shoulders. She looked middle-aged. He had seen an Englishwoman Artio would have guessed her to be nearly fifty. But as she was evidently a southerner it was possible that she might be much younger. Her figure was broad and matronly. Her face, once probably quite pretty, was lined, and had the battered and almost corrugated look that the faces of Italian women of the lower classes often reveal when the years begin to increase upon them. The cheek bones showed harshly in the long and dark eyes, which were surrounded by little patches of yellow skin. But Artio's attention was held out by this woman's quite ordinary appearance, but by her manner. Like the people about her, she was vivacious, but her vivacity was tragic—she had come here to be gay. Evidently she was in the extreme of grief of passion. She was speaking vehemently to Ruffo, gestulating with her dark hands, on which there were two or three cheap rings, catching at her shawl, swaying her body, nodding her head, on which the still black hair was piled in heavy masses. And her face was distorted by an emotion that seemed of sorrow and anger mingled. In her ears, pretty and almost delicate in contrast to the features, she had two large gold rings, such as Italian women often wear. They swayed in response to her perpetual movements. Artio watched her lips as they opened and shut, were compressed or thrust forward, watched her white teeth gleaming. She lifted her two hands, divided into five, till her eyes were on a level with her shoulders, shook them vehemently, then dashed them down on the table. The coffee-cup was overturned. She took no notice of it. She was heedless of everything but the subject which evidently obsessed her.

The boy, Ruffo, sat quite still listening to her. His attitude was calm. Now and then he tipped his white, and presently he took from his pocket a cigarette, lighted it carefully, and began to smoke. There was something very boyish and happy-go-lucky in his attitude and manner. Evidently, Artio thought, he was very much at home with this middle-aged woman. Probably her vehemence was linked to an everyday affair. She laid one hand on his arm and bent forward. He slightly shrugged his shoulders and shook his head. She kept her hand on his arm, went on talking passionately, and suddenly began to weep. Tears rushed out of her eyes. Then the boy took her hand gently, stroked it, and began to speak to her, always keeping her hand in his. The woman, with a despairing movement, laid her face down on the table, with her forehead touching the wood. Then she lifted it up. The paroxysm seemed to have passed. She took out a handkerchief from inside the bodice of her dress and dried her eyes. Ruffo drew out a small watch with his chain and glanced at the gold and the bill, and the woman and he got up to go. As they did so Ruffo presented for a moment his full face to Artio, and Artio swiftly compared it with the face of the woman, and left sure that they were mother and son.

Artio made a dash towards the hill of Posillipo, but after taking a few steps turned to look back. The woman and Ruffo had come into the road by the tram line. They stood there for a moment, talking. Then Ruffo crossed over to the path, and the woman went away slowly towards the Rotonda. Seeing Ruffo alone, Artio turned to go back, thinking to have a word with the boy. But before he could reach him he saw a man step out from behind the wooden shanty of the fishermen and join him.

This man was Gaspare.

Ruffo and Gaspare strolled slowly away towards the jetty where the yacht lie, and presently disappeared.

Artio found Pasquale waiting for him rather impatiently not far from the entrance to the Nezzula di Fiume.

"I thought you were dead, signore," he remarked as Artio came up.

"I was watching the people."

"He got into the carriage."

"They are enragata," said Pasquale, with the profound contempt of the Neapolitan coachman for those who get their living by the sea. He lived at Furogrotto, and thought Meriggiana a place of utter darkness.

"Oh, they are," rejoined Artio.

"You don't know them, signore. I say—they are enragata. Where shall I drive you?"

Artio hesitated, passing in mental review the various ristoranti on the hill.

"I will take you to the Ristorante della Stella," he said at length.

Pasquale cracked his whip and drove once more cheerily onward. When Artio came to the ristorante, which is perched high up on the side of the road hunched from the sea, he had almost all the tables to choose from, as it was still early in the evening, and it was not yet dark. The proprietors who frequent the more expensive restaurants usually drive late. He sat down at a table in the open air close to the railing, from which he could see a grand view of the bay, as well as all that was passing on the road beyond, and ordered a dinner to be ready in half an hour. He was in no hurry, and went to find a cab for his luggage.

There was a constant traffic here. The tram bell sounded its reiterated signal to the crowds of dusty pedestrians to clear the way. Hackneys trotted upwards driving carts loaded with vegetables and fruit. Animated young men, wearing tiny dark hats cocked imperiously to one side, drove frantically by in light gay

(Continued on page 32.)

(Continued from page 36.)

that looked like the skeletons of carriages, holding a rein in each hand, pulling violently at their horses' manes, and shouting "A! ah!" as if possessed of the devil. Smart women made the evening "passaginta" in landaus and low vehicles, wearing flamboyant hats, and gazing into the eyes of the watching men ranged along the low wall on the sea side with a cool stolidity that was almost Oriental. Some of the men were talking. But by far the greater number leaned back almost motionless against their cushions, and their pale faces showed nothing but the languid consciousness of being observed and, perhaps, desired. Stout Neapolitan fathers, with bulging eyes, immense brown cheeks, and peppery mustaches, were preening with their children and little dogs, looking lovingly contented with themselves. Young girls went primly past, holding their narrow, well-defined heads with a certain virginal stiffness that was yet not devoid of grace, and casting down eyes that were squinted and yet to be enlightened. Their governesses and dumas accompanied them. Bareheaded brown children darted in and out, dodging pedestrians and horses. Frantic and black-robed students chattered vigorously. Schoolboys with peaked caps hastened homeward. The ex-plains from Queen Margherita's throne higher up the hill marched sturdily through the dust to the sound of a boyish but disconcertingly martial music. It was a wonderfully vivid world, but the eyes of Artio's wandered away from it, over the terraces, the houses and the tree tops. Their gaze dropped down to the sea. Far off, Capri rose out of the light mist produced by the heat. And beyond was Sicily.

Why had that woman, Ruffa's mother, wept just now? What was her tragedy? He wondered. Accidentally he recalled her face, broad now and creased with the wrinkles brought by trouble and the years.

He recalled, too, Ruffa's attitude as the boy listened to her vehement, her almost violent language. How boyish, how careless it had been—yet not unkind or even disconcerting; only wonderfully natural and wonderfully strong.

"He was the deathless boy."

Suddenly those words started into Artio's mind. Had he heard them somewhere? For a moment he wondered. Or had he heard them? They seemed to suggest speech, a voice whose intonations he knew. His mind was still haunted by work and would not be commanded by his will. Keeping his eyes fixed on the ethereal outline of Capri, he strove to remember, to find the look which had contained those words and given them to his eyes, or the voice that had spoken them and given them to his ears.

"He was the deathless boy."

A player-organ struck up below him, a little way up the hill to the right, and above its loud accompaniment there rose a powerful tenor voice singing:

"Quanno fa notte 'nterra Mergellina,
Se ce sta 'o mare e canta abbinu chianu
Se in chiu dice d'aria d'a marina,
Pure a' serene cantano 'a luntano."

"Quanno fa notte 'nterra Mergellina—"

The song must have struck forcibly upon some part of his brain that was sleeping, must have summoned it to activity. For instantly, ere the voice had sung the first verse, he saw imaginatively a mountain top in shilly, evening light—such as one then shining over and transfiguring Capri—and a woman, Hermione. And he heard her voice, very soft, with a strange depth and stillness in it, saying those words, "He was the deathless boy."

Of course! How could he have forgotten? They had been said of Hermione's beauty. And now, fully, strangely, he had recalled them as he thought of Ruffa's young and careless attitude by the table of the ristorante that afternoon.

The waiter, coming presently to bring the French signore the plate of oysters from Fusaro, which he had ordered as the prelude to his dinner, was surprised by the deep gravity of his face, and said: "Don't you like 'A Mergellina,' signore? We are all mad about it. And it won't be the first time at last year's festa of Piedigrotta."

"Comment done?" exclaimed Artio, as if startled. "What?—no—yes. I like it. It is a capital song. Lemon? That's right—red pepper. Va la so."

And he bent over his plate—rattled hurriedly and began to eat. The piano-organ and the singing voice died away down the hill, going towards Mergellina:

"E c'asta luna dia!" "canta e c'asta
Lo vularia drittu, an nun e c'asta;
Me scorder e 'o suonno e 'o scorder
te Mare e Mergellina e 'o scorder 'o Bosa."

But the effect, curious and surely unaccountable of the song remained. Often, while he ate, Artio turned his eyes towards the mountain of Capri, and each time that he did so he saw, beyond it and its circling sea, Sully, Monte Amato, the dying lights on Etna, the evening star above its plume of smoke, the figure of a woman set in the shadow of her porch, yet almost terribly serene; and then another woman, sitting at a table, vehemently talking, then bowing down her head profoundly as if in angry grief.

When he had finished his dinner the sun had set and night had dropped down softly over the bay. Capri had disappeared. The long serpent of lights had unrolled itself along the sea. Down below, very far down, there was the twinkling and the blue, the gleam of gullies and moonlight, the throbbing cry of southern voices. The stars were out in a deep sky of bluish purple. There was no chill in the air, but a voluptuous, brooding warmth that shed over the city and the waters a luxuriant transfiguration, giving absolute, surely, to all the sense, to all the virtuous follies of the south.

Artio rested his arms on the balcony-rail.

The ristorante was nearly full now, gay with lights and with a

tempest of talk. The waiter came to ask if the signore would like coffee.

Artio hesitated a moment, then shook his head. He recalled that his nerves had been tried enough in these last days and nights. He must let them rest for a while.

The waiter went away, and he turned once more towards the sea. To-night he felt the wonder of Italy, of this part of the land and of its nature, as he had not felt it before. In a new and, as it seemed to him, a mysterious way. A very modern man, and in his art, a realist, to-night there was surely something very young alert within him, something of vague sensitivity that was like an echo from Mycenaean days. He felt irresolutely, but not unpleasantly, by a dim and exquisite melancholy, in which he thought of nature and of human nature pathetically, linking them together: those singing voices with the stars, the women who leaned on balconies to listen with the sea that was murmuring below them, the fishermen upon that sea with the deep and austere sky that watched their labors.

In a beautiful and almost magical address, he too was one with the night, this night in Italy. It held him softly in its arms. A golden outline streamed from the stars. The waters below expressed it. The fishermen's torches in the bay, those travelling lights that are as the eyes of the south searching for charmed things in secret places, lifted the shadows of earth towards the stars, and the water shivered. There was a joy even in the tears wet on such a night as this.

He tried detail. It was, perhaps, his fault to love it too much. But now he realized that the magiella, Night, knew better than he what were the qualities of perfection. Night had exchanged Naples into a deeper and more subtle spirit of the void. He knew that behind that lacework of jewels there were heroic, gaunt and discolored bones full of poverty, shame, and wickedness, gullies in which men hunted the things that gratify their lusts, alleys infested with disease and filth unscrutable. He knew it, but he no longer felt it. The glamour of the magic was upon him. Perhaps behind the stars there were terrors, too. But who, looking upon them, could believe it? Death might create a picture; its withdrawal let in upon the soul the spirit light of the true magic.

It was a mistake to search too much, to draw too near, to seek always to see clearly.

The night lull that in Italy, and many things not to be clothed with words.

Reluctantly at last he lifted his arms from the balcony rail and got up to leave the restaurant. He dropped the handle of the street. As he came out into it he heard the sharp "Ting! ting!" of a tram bell higher up the hill, and stepped aside to let the tram go by. He looked at it as it approached. He was still in the vague, the almost sentimental mood that had come upon him with the night. The tram came up level with him and slipped slowly by. There were a number of people in it, but on the last seat one woman sat alone. He saw her clearly as she passed, and recognized Hermione.

She did not see him. She was looking straight before her.

"Ah! Ah! Ah!"

A shower of obstructions in the Neapolitan dialect fell upon Artio from the top of a carriage coming up the hill. He jumped back and gained the path. There again he stood still. The sweet and half-unconsciously vagrancy had quite left him now. The sight of his friend had swept it away. Why was she going to Mergellina at that hour? And why did she look like that?

And he thought of the expression he had seen on her face as the tram slipped by, an expression surely of excitement, but also a furtive evasion.

Artio had seen Hermione in all her moods, and here was a very changeable face. But never before had he seen her look further. Nor could he have conceived it possible that she could look as her. Perhaps the lights had deceived him. And he had only seen her for an instant.

But why was she going to Mergellina?

Then suddenly it occurred to him that she might be going to Naples, not to Mergellina at all. He knew no reason why her destination should be Mergellina, but he began to walk down the hill rather quickly. Some hundreds of yards below the Ristorante della Stella there is a narrow flight of steps between high walls and houses, which leads constantly down to the sea at a point where there are usually two or three boats waiting for hire. Artio, when he started on his walk, had seen the steps, and he had seen, when he reached the steps he passed, and finally turned from the path and began to descend them.

He had realized that he was really in pursuit, and almost relinquished his purpose. Why should he wish to interfere with any intrusion of Hermione's that night?

He would return to Naples by sea.

As he came in sight of the water there rose up to him in a light tremor over a melancholy cry:

"Bural! Bural!"

He answered the call:

"Bural!"

The sailor who was below came gladly to meet him. "It is a lovely night for the signore. I could take the signore to Sorrento or to Capri to-night."

He held Artio by the right arm, gratefully assisting him into the broad shelter of the boat.

"I only want to go to Naples."

"To which landing, signore?"

"The Vittoria. But go quietly and keep near the shore, to avoid as near as you can to the Mergellina."

"Va bene, signore."

They slipped out, with a delicious, liquid sound, upon the moving silence of the sea.

AN OLD-FASHIONED STAGE-COACH.

Don't Go On Your Vacation

Until You Have Read The Great Vacation Number of "Recreation."

JUNE "RECREATION" WILL BE A GREAT BIG SPECIAL NUMBER OF THIS SPLENDID MAGAZINE, FULL OF LARGE AND ATTRACTIVE ILLUSTRATIONS AND PRACTICAL SUGGESTIONS TO ALL OUTDOOR PEOPLE

VACATION TRIPS will be given considerable space, and this number will give you a vast deal of practical information about real, common-sense, health-giving vacations, whether you have much or little to spend.

INFORMATION FREE TO READERS OF "RECREATION"

WHERE TO GO. We believe that "RECREATION'S INFORMATION BUREAU" has more valuable information at its command concerning various places for vacations, with all the good and bad points of each place, what it will cost, and other details, than any other organization.

RECREATION'S POPULAR "BEEN THERE" STORIES

RECREATION'S Popular "Been There" stories are written by people who have "been there" and know whereof they write. They tell all about vacations spent in widely varying sections of the country. They save you the usual "experimental first trip," and start you right. They tell you how, when and where to go, what to take and what it costs.

A Few of the Leading Articles in June "Recreation"

CANOEING ON THE CHARLES RIVER A SYMPOSIUM OF VACATION TRIPS—BUILDING RECREATION HOUSES—LIVING IN A HOUSE TEXT—A NEW GAME FISH—OLD FASHIONED BASS—SWIMMING STROKES—RECREATION TRIPS ON HORSEBACK. A DOZEN OTHER ARTICLES, AND ALL BEAUTIFULLY ILLUSTRATED.

ON ALL FIRST-CLASS NEWS STANDS 25 CENTS A COPY

"A PACK OF FUN"
"THE FISH THAT GET AWAY"
"CAMPING OUT WITH A BABY"

These booklets, which will delight the reader, are jam full of good, practical information and interest to outdoor lovers. Freely illustrated, 10 cents each, this time for 25 cents, by mail postpaid.

SPECIAL OFFERS TO YOU

1.—To introduce "RECREATION" to new readers, we will send it from June to December inclusive for \$1.00. June and December numbers are 25 cents each. We will also send FREE to every new acceptor this offer the three booklets named above. Subscribers in Canada add 25 cents for extra postage.

2.—If your newsdealer cannot supply you with the June number, send us 25 cents and we will mail the copy to you. If you will give us the name of the dealer who cannot supply you the June number when you send your order in, we will send you free any one of the booklets named above.

Flowers of Field Hill, and Swamp

By CAROLINE A. CREEVEY

Author of "Recreation in Botany"

The volume is the outcome of the author's idea that a grouping of plants upon the natural basis of environment, including soil, shade, moisture, etc., is possible. She describes all of the wild flowers commonly met with in the Atlantic States in so careful and thorough a manner that the amateur botanist will find no difficulty in readily placing them in their proper groups and families. The illustrations, about one hundred and fifty in number, have been drawn from the living plants, and will prove to be an invaluable guide in determining the several varieties.

The Chemistry of Commerce

By ROBERT KENNEDY DUNCAN

Author of "The New Knowledge"

The Chemistry of Commerce is a graphic narrative of the wonderful work of applied chemistry in the industrial world to-day. It affords an engrossing story of the invention and manufacture of commodities that are close to the business or home interests of each one of us. It is packed with information upon such topics as the making of artificial rubies and diamonds, of non-breakable Webbsch mantles, of the distillation of perfumes in quantities sufficient to float a frigate, of the coloring of glass, of the engines ring fasts accomplished by high temperatures, the preparation of drugs like camphor and quinine, the extraordinary future of industrial alcohol. Professor Duncan—himself a student of science and a practical chemist—spent a long time of study abroad and secured his material personally from famous chemists at work in their laboratories.

The Pressure of Sunlight.—The earth sustains a sunlight load of 75,000 tons. The pressure is measured by instruments that feel what our hands can never feel. What they record has brought out a new theory in world-making, the pressure of light as a force counteracting gravitation. WILHELM KARMPPERT tells of the wonderful consequences of this discovery. Accompanying his graphic article are many new photographs taken at the most celebrated observatories in the world.

Wintering Among the Eskimos.—After spending an entire winter among the Eskimos, V. STEFANSSON has been able to contribute to our general knowledge of that people a hitherto missing chapter—an intimate study of their home life, extending over a period of many months. The article is extremely interesting and has an important ethnological value as well. Many photographs accompany it.

The Romance of the Clipper Days.—Captain ARTHUR H. CLARK writes of that wonderful zenith of American shipping, the era of the clippers. The marvels they accomplished in the pre-railroad days are not far-fetched tales, although they are as fascinating as breezy untruths. There is a patriotic sweep in these pages, too, for America was then a maritime power. With photographs of famous ships and their commanders.

Wall Street in the Revolution.—A dramatic glimpse of American history—how the news of Concord was told to the reverent worshippers of Old Trinity as they poured out of its doors into Wall Street one Sunday morning. FREDERICK TREVOR LILL writes of this period in his notable historic series. Accompanying the article are reproductions of some quaint old prints, as well as drawings by Harry Fenn.

Verbal Criticism.—Professors LOEWENBERG tells of quarrels over syntax in the days of Cicero and of Plutarch, with instructive comment on all but ever-new questions of correct usage.

Etchings of Old Salem.—In a series of exquisite etchings CHARLES HENRY WHITE has caught the old-time atmosphere, the quiet grace that still clings about the historic town of Salem. The accompanying text is a bit of fresh and delightful comment.

A Notable American Painter.—CHARLES H. CAPPIN reflects the spirit and purpose of one of America's most eminent painters, Edmund C. Tarbell. Many examples of Mr. Tarbell's work are reproduced. Mr. CAPPIN also deals with the layman's attitude toward painting in America, the perplexed and disappointed attitude in what he terms a transition period in art.

Seven Great Short Stories.—HARPER'S stories are not the best of one kind, but the best of every good kind. There are seven specially excellent ones in the June number.

Mrs. Humphry Ward's Great Serial, "The Testing of Diana Mallory"

THE BEST GOLF BOOK

Practical Golf

By

WALTER J. TRAVIS

Mr. Travis, who won the amateur golf championship of the world, gives in these practical papers the results of his own experience and practice. Mr. Travis is not only a player, but a student of golf. He has worked out its principles for himself, and in this manual he has set them down in order for the benefit of others.

ANNOUNCEMENT

WE INTRODUCE
to you a flour which is different
from other flour.

It is hard to attempt to describe it
truthfully, yet so you will recognize its real merit.

Because such adjectives as "greatest," "finest" and "the acme of excellence"
have already been exhausted in describing flour made from average materials, by average workmen with
average facilities at their command. Yet the ultimate has never before been reached by the average miller or
by ordinary methods.

So, we repeat, it is somewhat difficult to properly announce a product of the extraordinary merit of
Napoleon Flour. But we feel that there are many, many women who will recognize the ring of truth and
understand.

There has for a long time been a keen desire on the part of "the woman who cares" for a better flour
than the "average"—for a flour which would bring out to the utmost the best qualities of the best wheat.

Not a flour to build up big profits, but a flour which will build up a royal corps of friends in our American
homes. We have found the miller who is willing to work towards the "ideal"—a perfect flour. Who will
forget quantity and strive continually for quality.

We have arranged whereby we may grade out the choicest, most perfect kernels of wheat for Napoleon
Flour. We have devised a superior package for this flour, to protect the contents from the chance of con-
tamination. No dust or dirt in shipment or in the grocery bins lodgement in it. If you are "the woman
who cares" and are willing to pay a few cents more for Quality—

Try Napoleon Flour next bake-day.

NAPOLEON FLOUR

COMMENT

To William Howard Taft

RECENTLY suggested: WINTHROP MURRAY CRANE, of
 Massachusetts, a good man and able, a capable director, a
 vote getter, strong where strength will be required.

A Confession in Verse

Every week the *Commenter* prints a poem "for the home."
 The latest it smiles upon most approvingly, and pronounces
 "so simple, sweet, and true." The poem is entitled "Over
 and Over Again," and runs along like this:

I must take my turn at the mill,
 I must grind out the golden grain,
 I must work at my task with a resolute will,
 Over and over again.

We cannot measure the need
 Of even the thinnest flower,
 Nor check the flow of the golden sands
 That run through a single hour.

But the morning dew must fall,
 And the sun and the summer rain
 Must do their part, and perform it all
 Over and over again.

Over and over again
 The break through the meadow flows,
 And over and over again
 The ponderous mill wheel goes;

Over doing will not suffer,
 Though doing be not in vain;
 And a blessing falling on one or twice
 May come if we try again.

The path that has once been trod
 Is never so rough to our feet,
 And a lesson we once have learned
 Is never so hard to repeat.

It closes with a pretty suggestion to the effect that trying
 "over and over again" is necessary to "render us meet for
 heaven." Brother WINTHROP CRANE intimates that the verses
 were written by PIERRE CURET, but he can't find us. The
 name of the grinder of the golden grain who finds the path
 once or more times trod "never so hard to repeat" is a home-
 hold word. We shall not breathe it here, but the shrewd
 reader will not fail to note the unconscious use of the edi-
 torial "us" in the "meet for heaven" stanza.

"It is too Late"

MARSH HENRY's motto is suited to the most. He may not
 like it, but he can't get it down now until after Decey.

Mr. Roosevelt's Way of Getting a Thing Done

The recent conference of the Governors over the conserva-
 tion of our natural resources exemplifies in a high degree

the grand manner by which President ROOSEVELT sometimes
 gets things done. Here was Mr. ROOSEVELT himself coming
 into the East Room behind a huge blast and two very
 straight-backed military aides. And here to listen to him
 make the opening speech, and to make speeches themselves
 when he had finished, were Mr. BRYAN, the hale fellow well
 met, versed in Bible lore and the philosophy of the casuistry
 everlasting; Governor JOHNSON, Governor FOLK, JOHN
 MITCHELL, JAMES J. HILL, and ANDREW CLARK; also those
 two very desirable hot-weather associates, Governor HUGHES
 and the Vice-President! What a juxtaposition of rivals to
 appeal to the romanticism of the *hoi polloi*! But the confer-
 ence was more than romantic; it resulted in a declaration,
 on the third day, from which the following:

We, the Governors of the States and Territories of the United
 States of America, in conference assembled . . . agree that this
 co-operation should find expression in suitable action by the Con-
 gress within the limits of and coextensive with the national juris-
 diction of the subject, and, complementary thereto, by the Legisla-
 tures of the several States within the limits of, and coextensive with
 their jurisdiction . . . that further action is advisable to ascertain
 the present condition of our natural resources and to promote the
 preservation of the same. And to that end we recommend the ap-
 pointment by each State of a commission on the conservation of
 natural resources to co-operate with each other and with any similar
 commission on behalf of the Federal government.

Thus have the highest representatives of the States put it
 up to Congress and the State Legislatures. Who but Mr.
 ROOSEVELT would have conceived, much less realized, the
 conference by which this result has been attained!

Addresses that Should be Studied

We presume that a complete record of the proceedings of
 the conference will presently be issued in book or pamphlet
 form, either for distribution or so as to make it easily
 attainable by readers. Some of the addresses, such as Mr.
 CLARK'S on metals and ores, Mr. JAMES J. HILL'S on soil
 waste and farming, and many others, contain very valuable
 knowledge skillfully imparted. They make important read-
 ing, and while the newspapers have given the substance of
 some of them, they are worth obtaining in complete and per-
 manent form, and studying. It is very rare for so much
 to be said that was worth hearing, reading, thinking about,
 and acting upon as was said at the conference of Governors.
 The great value of the conference was educational. To teach
 the people to appreciate, develop, and conserve the wealth
 of the nation is a duty of enormous importance, and none too
 soon undertaken.

Bourne Loses Oregon to Taft

On May 14 Oregon's eight delegates to the Republican
 convention were instructed for TAFT. A message from
 Senator BOURNE, urging instruction for ROOSEVELT, said also
 that if the delegation was to be otherwise instructed he did
 not wish to be a delegate. Will Senator BOURNE go to
 Chicago, then, as an independent stamper?

The Great Distinguisher

The Jackson (Mississippi) *Delta News* suggests an interest-
 ing thought. "Bryannism," it says, "stands wholly rejected
 and repudiated by the country, and it is the height of political
 folly to go before the country a third time under the leader-
 ship of a candidate who cannot carry his own State, and who
 is slowly but surely working the political disintegration of
 the South." "Should but surely working the political dis-
 integration of the South," is he! Possibly that explains,
 or helps to explain, Mr. BRYAN'S place in nature. Probably
 we should put him in the group with earthshakers, flood, and
 fire, as one of the great destructive forces. To break the
 solidity of the solid South has long been thought of as a
 very big and difficult job, but on divers occasions, for the
 South's own sake and for the country's sake, a thing to be
 desired. We are confident that Brother BRYAN can do it if
 time is given him. He has got the bump into a pretty crum-
 ple state as it is. If he should be chosen at Denver, we would
 not greatly wonder to see some considerable masses drop away
 from it before November.

The International Union of American Republics and Its Bureau

On May 11 the President, the Secretary of State, the
 Brazilian ambassador, and Mr. CARMON, assisted by Cardinal

GRIMES and Bishop CRANSTON, presided the words and passed at the laying of the corner-stone of the new building for the Bureau of the International Union of American Republics. The significance of the ceremony was suggested by Senator NAYOR when he said there had never been a parallel for the sight which it presented—"that of twenty-one nations of different languages building together a house for their common deliberations." The Union and its bureau were thus briefly described by Mr. Root:

The International Union for which the building is erected is a voluntary association. . . . It had its origin in the first Pan-American Conference held at Washington in 1890, and it has been developed and improved in efficiency under the resolutions of the succeeding conferences in Mexico and Brazil. Its primary object is to break down the barriers of mutual ignorance between the nations of America by collecting and making accessible, furnishing and spreading, information about every country among the people of every other country in the union, to facilitate and stimulate intercourse, trade, acquaintance, good understanding, fellowship, and sympathy. For this purpose it has established in Washington a bureau or office under the direction of a governing board composed of the official representatives in Washington of all the republics, and having a director and secretary, with a force of assistants and translators and clerks.

The bureau has established a rapidly increasing library of history, travel, description, statistics, and literature of the American nations. It publishes a monthly bulletin of current public events and existing conditions in all the united countries, which is circulated in every country. It carries on an enormous correspondence with every part of both continents, answering the questions of seekers for information about the laws, customs, conditions, opportunities, and personnel of the different countries; and it has become a medium of introduction and guidance for international intercourse.

No Federal Mothers' Day as Yet

ELMER J. BURRILL, Republican Senator from Lincoln, Nebraska, is the state-man who introduced into the Senate the resolution providing that "Sunday, May 10, 1908, be recognized as mothers' day, and that it be observed as such by the members of the United States Senate wearing a white flower in honor of their mothers." The Senate respectfully declined the resolution. The Lincoln statesmen of both parties seem to believe in feeling around to find out what the people want. And very curious experiments they do make, and, of course, stub their toes hard sometimes.

Joyous Times for Colonel Stewart

Colonel WILLIAM F. STEWART, the Arizona Eagle, may have his faults; we suspect he has; but nobody can charge him with being a quitter. The order sent to him last September from the War Department advised him of the intention of the department to assign him to a station, probably Fort Grant, Arizona, without comment. But it disclosed that the President had directed that before the order was issued a chance should be given him to apply for retirement. The order continued:

The acting Secretary of War directs that immediately upon receipt of this communication you telegraph acknowledgment thereof to this office, and that within twenty-four hours afterward you advise this office by telegraph whether you do or do not desire immediate retirement, under Section 1233 Revised Statutes.

That was eight months ago. Colonel STEWART has been to Arizona, travelled back to Florida, been rejected there, and gone again to Arizona. If his health is good, his disposition as complicated as without special knowledge we have faith to believe it is, and if he has been permitted to receive and read the daily papers, the chances are he has had the most fun he ever had in any eight months in all his life. He has been advertised in every paper in the country. Nothing definite has been printed to his discredit; he has seen his case involve the President and the Senate in a clash of authority, which promises to be fought out in due time; and if contention is his specialty he must surely be a very happy man. It does not seem as if his case had been skillfully managed for anybody except himself; but so far as he is concerned, any personal discomforts he may have suffered must seem to him a lugatelle compared with the fun he is having.

The Interest in Hughes

GOVERNOR HUGHES is an interesting fighter. It does not take much of a prophet to fore-see that there is going to be an effort to keep him in active political life, as well as a lively effort to get him out of it. Some people want the things done that he is trying to do; others want the men

listen who want to beat him; others, still, being friends of sport, like the grade of entertainment that he provides, and want to see what he will do next. All three groups are interested in him, especially as contrasted with MURRAY and CONNORS.

Busy Days for Tom Johnson

These are agitating days for TOM JOHNSON's three-cent-railroad system in Cleveland. The strike with which his administration began is the acute trouble for the moment, and is proceeding briskly as we write, with aid of dynamite and the usual concomitants of a bad strike. That will pass after a while, but JOHNSON's work seems cut out for him in other particulars. Cleveland wants a good service, and seems ready to pay for it. It has had a good service in the past, and knows what it is, so it has standards of comparison. Unless JOHNSON can come pretty well up to those standards his three-cent fare may not be popular. To get a five-cent ride for three cents is a gain; to get a three-cent ride for three cents is no gain at all unless a three-cent ride happens to be what you want. Just at present Cleveland is not getting even a three-cent ride for three cents. Nevertheless, the three-cent plan will doubtless have a fair chance to disclose all the merits it has. Cleveland has paid for too much for the chance to test it not to make a thorough test now the chance has come.

Fly-away Times

Flying-machine stories never read quite so much like truth as this spring's crop. By all accounts the WINGMANS were working wonders when their machine was wrecked, and as we go to press Professor BEE's aeroplane is yielding very interesting news items from Hammondport, New York. The world is more than interesting in these times. It is sensational. You can't hold it any more.

Church Influence in Politics

There have been smiles at the report that at the meeting of the Methodist General Conference on May 14 Bishop NEXBY charged the Roman Catholic Church with mingling in politics. Its influence, he said (as quoted), is felt in our State and municipal governments and at Washington. No doubt, no doubt; but it would not be hard to get testimonials that the influence of Bishop NEXBY's Church is also felt in our State and municipal governments and in Washington. Who fights the army cadets? Who makes Congressmen afraid to come home without having driven beer out of the Soldiers' Homes? Who took notice when Mr. FURNACE drank the cocktail? The Methodist Church is very influential in our politics. There are six and a half million Methodists in the country, over five million Baptists, and eleven or twelve million Roman Catholics. All three of these large churches are bound to be influential, and the Methodists certainly are. Just what distinction Bishop NEXBY would make between Methodist political activity and Catholic activity we don't know. It is conceivable that in some matters the two influences supplement one another to the profit of the community, and that in other matters they temper one another, also to the profit of the community.

Osteopaths are Physicians

Within the meaning of the law who is a physician? Recently this question has been answered by Justice DOLY, of the Supreme Court, in the case of a well-known Brooklyn osteopath who applied for a presumptive writ of mandamus to compel the Health Department to accept a death certificate issued by him. The department had refused to do this on the ground that the osteopath was not a physician, and therefore not entitled to have the certificate accepted, such acceptance being by law made applicable to physicians only. In his decision the justice quotes as follows from Chapter 314 of the laws of 1905:

A person practices medicine within the meaning of this act, except as hereinafter stated, who holds himself out as being able to diagnose, treat, operate or prescribe for any human disease, pain, injury, deformity or physical condition, and who shall either offer or undertake by any means or method to diagnose, treat, operate or prescribe for any human disease, pain, injury, deformity or physical condition.

He then gives it as his opinion that "the lawmakers intended to make, and do make, osteopaths practitioners of medicine," immediately adding, "and also make them physicians, be-

cause Subdivision 8 of Section 1 of this act says that a physician means a practitioner of medicine." "So it is clear," he says, "to my mind that osteopaths are physicians, . . . and except for restrictions put upon them by Chapter 544 of the laws of 1905, prohibiting them from administering drugs and performing surgery with the use of instruments, they are entitled to all the rights and subject to all the privileges of other physicians." Can receive money from patients, that is, cure them of their ills where practicable, and in other cases issue them lawful death certificates, receivable by the Board of Health.

Public Interest in Crime

On another page of this number of the WEEKLY there are pictures of Mrs. GUNNESS and her murder farm in Indiana. No doubt there has been far more read in the last three weeks about this great artist in homicide than about the proceedings of Congress, the convention of the Governors, and even all the doings of the politicians in anticipation of the two political convulsions. An extraordinary tide is this of GUNNESS. It beats the story of the BENDINGS, and is unrelieved gruesome for far outdoes the narrative of the JAMES boys. It is pretty well up the history of BERRY and HUAN, and crowds hard the execrable narrative of RANSOME BAY. People, all sorts of people, unquestionably find a great interest in stories of remarkable crimes. Folks who have never read much of anything but newspapers think that this taste for criminal reading is one that the newspapers have invented and maintain by constant feeding. Undoubtedly the more sensational papers make far more of crime than they should, and do thereby cultivate an injurious taste for reading about it. But it is a taste that they have by no means invented. A standard and steady literary product for centuries has been books about noted crimes and criminals. In almost every collection of books of mature age in the second-hand book-shops, at library sales, and on the counters of importers, there are rows of such books, often valuable and handsomely bound. Not so many, relatively, are made and sold in our day, because the newspapers cover the ground and supply the demand so efficiently.

Why Our Murder Ratio is High

The high ratio of homicide to the population in this country, which is just now one of our national reproaches, may lead some observers to believe that there is something in our civilization or our political or social institutions which breeds an inclination to murder. That supposition seems to do our country injustice. Our white citizens, who have lived in this country long enough to have fairly imbibed its influences and characteristics, seem to be no more homicidal than other civilized white folks. The percentage of murder in Massachusetts, Vermont, Rhode Island, and Connecticut is less than it is in England. Where the figures are high it seems to be due either to unsettled conditions in the newer States, to large negro populations, or to immigration. There are about fifty-seven million native-born white people in the country—say, three-fourths of the population—to whom are credited forty-three per cent. of the murders. If all the population was of this grade, the number of homicides would be cut down more than forty per cent. But nine or ten million negroes (one-eighth of our population) do nearly forty per cent. of the murders, and about ten million foreign-born persons are credited with sixteen and a half per cent. of it. That is to say (roughly), a quarter of our population does considerably more than half of the killing, and neither the negroes nor the foreign-born persons can be rated as products of our civilization. The Italians are unduly, even extravagantly, prone to homicide both at home and here; and both Italy and all other countries that our immigrants come from doubtless send us a larger proportion of unruly or criminal persons among their emigrants than is found in their stay-at-home populations. Many of the best and some of the worst of the Europeans come here. The HUNTERS were imported from Germany; Mrs. GUNNESS from Sweden. In the morning paper the persons arrested for the bomb explosion were Italians; the farm-hand who has confessed the murder of three in New Jersey was born in Bohemia. New York State yields unsatisfactory statistics of homicide, for the reason apparently that a large proportion of its population is newly come from abroad.

Election Prospects

With the week ending May 16 the campaign for the selection of delegates to the Republican national convention was practically closed. The estimates of the net result vary, of course, materially, according as they emanate from the TAIT managers or from the supporters of the so-called "allies." On the evening of May 15 Mr. HIRSHCROCK put forth from the TAIT headquarters in Washington a claim that the Secretary of War will have at least 584 out of the 982 delegates who will sit in the Chicago convention. Of this number 317 are described as instructed, 26 as pledged by resolutions of endorsement, and 51 by their personal declarations. Of the unpledged delegates, who number, he says, 163, more than a hundred are alleged by Mr. HIRSHCROCK to be favorable to TAIT. On the whole, therefore, he puts the TAIT strength, "conservatively estimated," at about 700 delegates. In this conclusion a statement made on the same night at Columbus, Ohio, by Mr. A. F. VOYTS, the principal campaign manager for TAIT, substantially concurs. Mr. VOYTS computes at 563 the number of delegates chosen to vote for Ohio's candidate, either under positive instructions or under resolutions of endorsement, or with expressions of individual preference that are pronounced equivalent to instructions. Mr. VOYTS asserts that, in all, thirty-six States, Territories, and Insular possessions have instructed for Secretary TAIT.

The speakers, on the other hand, of the "allies" (CARSON, FAIRBANKS, FORAKER, HUGHES, KNOX, and LA FOLLETTE) will endeavor to TAIT only 353, against 231 instructed for one or another of his opponents. They insist that the uninstructed delegates number 228 and the contested delegates 174. The principal difference between the two calculations lies in the uninstructed column, in which the "allies" have included several districts where resolutions of preference, but not of instruction, were passed. More trustworthily, because extremely impartial, is the conclusion at which the New York Herald has arrived. That paper avers that TAIT goes to Chicago with 431 instructed delegates, all of whom are unopposed, except in the cases of Virginia, Louisiana, and Texas. The Herald also calculates that the Secretary of War will receive 46 votes from delegates elected by State conventions where TAIT was "endorsed," and 81 votes from delegates who are known to have pledged themselves personally to vote for TAIT. This estimate gives the Secretary of War 538 delegates on the first ballot. Should he lose, however, the 74 contested votes in Virginia, Louisiana, and Texas he would have only 484 delegates, or seven less than the 491 needed to nominate. It is to be noted that the Herald takes no account of 20 uninstructed delegates from New York, of 20 uninstructed delegates from New Jersey, of 5 uninstructed delegates from Delaware, 8 from Illinois, and 22 uninstructed delegates from Georgia. It also excludes from its count 14 votes contested by TAIT against HUGHES, CARSON, FORAKER, and FAIRBANKS. On the whole, then, the Herald believes, as the result of its own investigations, that if instructions, endorsements, and pledges amount to anything, WILLIAM H. TAIT will be nominated by the Chicago convention on the first ballot. That some of the shrewdest and most experienced leaders of the Republican party not originally invulnerable to TAIT now agree with the Herald in expecting him to be the nominee is evident from several incidents that occurred in the week ending May 16. For example, intimate friends of Vice-President FAIRBANKS are beginning to intimate that they would be satisfied with a renomination of the Indiana candidate for the second place on the ticket. Then, again, Senator FORAKER has completely changed front on the Brownsville question, and consented to a postponement of a vote on his bill arbitrarily reinstating the discharged negro troops until the next session of Congress. It is now believed that Mr. FORAKER, in consideration of a promise that he shall be re-elected Senator, has agreed to take the stump for TAIT. He would have it in his power to render the Secretary of War an insupportable service, for he, if any man, can lead the negro voters of the Northern States back into the Republican party.

Regarding the amount that Secretary TAIT will be the Republican nominee, we are brought next to the inquiry, Can he be elected? The question is answered in the negative by ex-United States Senator WILLIAM E. CHANDLER in a letter addressed to Senator GALLINGER, Governor JOHNSON, and the other delegates from New Hampshire to Chicago. He names seven reasons why the choice of TAIT for Republican standard-bearer would be dangerous. These reasons are: First, the hostility of the colored voters to TAIT; secondly, the mischievous of the Federal officeholders in manipulating the State conventions in many of the Southern States; thirdly, the vast expenditure of TAIT money in the prosecution of his campaign for the nomination; fourthly, the loss of friends in this; fifthly, the abandonment of the anti-trust and anti-pooling laws; sixthly, the hostility of the labor organizations; and, seventhly, the combination of TAIT supporters with the narrow-track supporters in New York against Governor HUGHES. It is claimed that the first and fourth objections to TAIT's nomination will fall to the ground if Senator FORAKER is re-elected. As for the sixth, the hostility of labor organizations, that would be minimized if Mr. ROOSEVELT should undertake an electioneering

tour on behalf of his Secretary of War. Something, however, might be made of ex-Senator CHAMBERLAIN's arrangement of TAFT's availability if the Democrats, in their convention at Denver, should put forward a "safe, sane, and conservative" nominee, or, in fact, almost anybody except BRYAN.

This brings us to the question whether it is true that the Nebraska man is an unshakable lodger on the nomination of his party. Much more light than we now possess will be thrown upon this question when we shall have learned the decisions of the State conventions of Alabama, Missouri, South Carolina, Texas, West Virginia, Louisiana, Maryland, Arkansas, Virginia, Florida, Tennessee, Kentucky, North Carolina, and Georgia, which will be held at various dates between May 18 and June 27. If Governor JOHNSON of Minnesota, who, as a member of the Conference of Governors, made a most favorable impression in Washington, shall develop considerable strength in the States just named, BRYAN's nomination at Denver will be exceedingly doubtful, and a Democrat who may himself be substituted for a twice-defeated leader. A keen observer, Major J. C. HICKMILL, editor of the *Charleston News and Courier*, pointed out in Washington the other day that of the 1892 vote in the Denver convention only 404 are as yet pledged to BRYAN, while 392 are anti-BRYAN and 286 are dispassionate. Inasmuch as a two-thirds vote is required to nominate in a Democratic national convention, it is not surprising that BRYAN should have sent forth a Missourian cry in the last issue of the *Commerce*: "Instruct your delegates to the national convention. Instructions to delegates are the order of the day."

For the moment only three distinguished names have been seriously considered by the anti-BRYAN Democrats: those, to wit, of Governor JOHN JOHNSON, of Minnesota; of United States Circuit Judge GRAY, of Delaware; and of Congressman WILSON, of Virginia and New Jersey, who for some years has been the president of Princeton University. The friends of these three gentlemen will, of course, work together to prevent Mr. BRYAN from obtaining the indispensable two-thirds vote. Assuming for the moment that their combination will be strong enough for the purpose, let us inquire which of the three anti-BRYAN candidates named it would be most expedient for the national Democracy to take. There seems to be a consensus among intelligent persons conversant with the political situation in Minnesota and North Dakota that Governor JOHNSON could be certain to carry those States, and that he would also bring many thousands of votes in the support of the Democratic ticket in Wisconsin, Illinois, and Michigan. On the part of Judge GRAY, it must be said that no chairman of the Anthracite Coal Strike Commission he won the confidence of labor unionists to an extent only paralleled by Mr. ROOSEVELT himself. Under the circumstances, it is conceivable that Judge GRAY might carry a Republican stronghold so long reputed impregnable as Presidential years as is the Keystone State. There is no doubt, either, that he would run incomparably better there would Mr. BRYAN, and probably better than would Mr. JOHNSON, in New York, New Jersey, and Connecticut.

Could Judge GRAY be relied upon, however, to win back to the Democratic standard those border States which of late have been lured away from the Democratic column? We assume that his own State would support him, but could he also carry Maryland, West Virginia, Kentucky, and Missouri? There is one man who in all likelihood could sweep every one of these States, because he would be the first genuine Southerner to be nominated and elected President by the Democratic party since 1844. We refer, of course, to President WASHINGTON WILSON, who was born and reared in Virginia, and who, after graduating at Princeton, returned to his native South, was admitted to the bar in Florida, and married a daughter of that State. We do not believe it possible that President WILSON could lose a single electoral vote belonging to the so-called border States from Maryland to Missouri. Turning to the State of his adoption, we may say with absolute confidence, what every well-informed Virginian knows, that nothing could deprive President WILSON of New Jersey's electoral votes. It is also certain that he would run incomparably better there would Mr. BRYAN in New York and Connecticut, and probably better also than Judge GRAY, because he is more widely known.

On Prolonging Life

THE world rings with good news to the heteroer, and here comes MEMORABLY telling us that the Biblical computation of man's allotted period on earth is all too modest, and that there is no reason why we shouldn't go on indefinitely extending our limit. Science indeed seems to tend that way. We are constantly coming across new methods of thinning disease and saving lives. Now if we are but willing to destroy the bacteria of senility and decay by a prudent diet of sour milk and vegetables, and if we are not starchy enough to keep the heart and mind unperturbed, we are good for a century or more. As soon as this news spread well over the country, examples began to crop up on all sides, so ductile is flesh to suggestion, and we read everywhere of pleasant

and happy folk celebrating their hundred-and-eight, or hundred and twenty-fifth, or hundred-and-forty-fifth birthdays, and declaring that they would be glad to run the course again.

How distinct all this is to the conceptions of youth! Who that ran place himself once more into the mind of the child of eight does not remember how all the golden dreams clustered about the age of sixteen? Then romance and adventure and love living were to begin for us; then our importance and power were to be rounded out, and we would act upon this outer world that so far seemed compact of fearings and forbidings. And what a time it was at sixteen to find ourselves in no better plight than at eight, still a little whizzing atom in a vast, the romance and the adventure and the power still taunting us from the distance, till we shared the dream out a year or two, although thirty still seemed an ideal age to meet death.

There is so much obvious evil to be spoken of, life, and so many of us are busy pointing out its inevitable mortality, its limitations, and its fatal sufferings and endings, that perhaps it is worth while, too, to mention one of the encouraging facts, namely, that as we live, we learn how to live. It is the young, and the mature or the aged, who are wretched and self-indulgent with life. It was not Phares but Alevisio who was willing to lay it aside. Phares says to his son:

"Is it a joy
To view the light of heaven? And dost thou think
Thy father joys not in it? Long I dream
The time to do it! But little is the space
Of life, yet pleasant."

Yes; however little it may look like happiness, it is age and not youth that has come to feel at home and at ease upon earth. "We are born with trials and strong crying." We arrive in the world protesting against its alien and unaccustomed climate. We are ready at the slightest breath of wind to shuffle off our tiny mortal coil and make back to a more fitting atmosphere. For the first few years we consent to remain only under most careful watching, feeding, and coaxing. And then we catch the mortal disease of hope. We begin to live looking forward to that which is not but shall be, our birthdays, or Christmas-time, or the end of school, or our first ball, or winter or summer or spring. Only one thing is sure: we live because we hope for that which is not, and as the years wax old we learn how not to be.

And yet during all those years of strife and hope something happens. Silently, while our eyes are turned aside, when we were least aware, we were learning to live. By dint of disappointments and failures, little successes and surprises in the workings of the great machinery of life, we were finding our level in the universe and adapting ourselves to the human climate. Not only do we harden ourselves to the difficulties of life, but all sorts of new joys spring up about the way; and let a man come once to fifty years, and he can take as much joy from a glimpse of a duck pond as at twenty he can get from crossing the Pacific Ocean. Partly it is growth and adjustment—the happy result of use and want—but partly it is, too, that, hit by hit, that clamoring and exacting creature we call the self has become torpid with age and has gotten a little out of our way. And how much easier all life's tasks are, how multiple all its solaces, once we are rid of our selves! It sometimes seems as if all we have to do is to stand out of our own light long enough to be minute and genuine. But only by the twice-born can this be accomplished in youth. To the average run of us, the rolling years alone school us to let the self and its affairs go by while we seek the kingdom of God. And all the other things are added to us, we hardly know how, without willing of ours, without striving. With a half century of mortal years behind us, the slaking of the sun in an aura of golden wings gives an intensity of joy that at a quarter of a century old the inheritance of millions and the acquisition of fame cannot bequeath. The centre of interest has shifted itself, and it is no longer our own hunger and thirst, our housing and our garments, our illustrations and our possessions, licking at these always are, that claim our consciousness, but we have fallen silently and unawares in love with the universal processes—the shadows on a vine-clad wall, the freshness of the air in early morning, the gold haze dropping from the sun at sunset, the slant light of afternoon checking the earth, and the silent and regular unobtruding of the stars at night; these appease the spirit when earth has become our veritable home where we linger as part and parcel of all that goes on there. For poor ignorant youth goes about hungry for happenings, longing for accumulated things. But there is but little life in things and events after all. Life is in the projecting spirit, and to sit still and see the wind flutter the leaves is a tragedy is happening enough to lead the spirit in silent and unending delight for hours together. But the spirit must grow, the self must get out of its own light, before we can project this real joy of living into the world.

Do you remember "Will o' the Mill," and how he cautioned the maiden not to pick the flowers and carry them into the house for her own? "It's a bit like what I wished to do when I was a boy. Because I had a fancy for looking out over the plain, I

wished to go down there—where I couldn't look out over it any longer. Wasn't that fine reasoning?"

But you remember he did not go, or did he take the maiden, had stayed quietly up on his mountainside, and year after year faded away into nothing, while down in the cities on the plain red revolt sprang up and was suppressed in blood; battles were fought; there were christenings and marriages and parades and deaths, all the tumult and the agitation of constant happenings; but still knew them all to be but so much empty bubble, and still living to be in the quiet spirit. And if these learned and aged folk, who, having lived long and loved much, neither show nor court death, it is that this life having taught them so much courage and confidence, they take it that death will look after itself even as life has done, that deepest lessons, our greatest blessings, have dropped like silent seed into our spirit from we know not whence. Our own hand has done so little in the whole matter, our responsibilities were so greatly less important than we figured, that surely we may trust the new transference, and wait in silent content what revelation it shall bring.

Personal and Pertinent

THE late Professor WALTER A. WYCKOFF, of Princeton, and a pension for knowledge at first hand and will be best remembered as the college professor who studied higher conditions by becoming himself a laborer. Starting in 1891 in Connecticut with no money and with a mail of cereals, he worked his way through nearly every State in the Union after the fashion of the floating laborers of this country, so many of whom ultimately become tramps. Wherever there was a possibility of work he applied for it, whether it were digging ditches, performing house or factory work. For a while his income monthly worked well, but as soon as his fellow laborers saw him at table they at once began to suspect him. His manner of eating, his way of holding knife and fork, at once set them speculating. Once he was seen drinking tea at a fellow laborer's house in Chicago. He lifted the saucer from the table, held it in his hand, and forgot himself so far as to drink without noise. "I knowed then," his host afterward said, "that he was a well-meaning fellow."

Correspondence

VIVISECTION

CALCUTTA, INDIA, May 21, 1902

To the Editor of Harper's Weekly:

SIR,—The writer regrets that he must discontinue HARPER'S WEEKLY, which has been in his family since before the civil war. It may not be wise to state the cause. A number of years ago I decided to take no part in the vivisection. Between vivisection for the benefit of its soul and vivisection for the benefit of its body, humanity appears to me to come about as near moral justification as is possible. Justice, simple justice, demands such methods of salvation, to my mind.

The occasion of these comments is two editorials in HARPER'S WEEKLY on vivisection.

I am, sir,

FRANK DRUMMOND.

GOOD, HEALTHY CRITICISM NEEDED

BROOKLYN, N. Y., May 21, 1902

To the Editor of Harper's Weekly:

SIR,—You will kindly pardon this intrusion into the editor's sanctum, for the reason, as Fanny Quiller would say, that it is the outcome of an irresistible impulse. I cannot but give expression to the enjoyment I received from the splendid articles by Stevenson and Brooks in the last number of the WEEKLY. They were a little above the average of even HARPER'S, to my mind. You are to be congratulated on the retaining of such a man as Brooks to keep your readers in touch with the politics of Great Britain. It seems to me that the best way of furthering the cause of international unity is to instruct the people in the political movements of the nations with whom we have to do. To understand is to forgive; and when in our public schools and high schools our children are taught the unbiased history of the English people, more will have been done towards the insurance of future peace than can be accomplished by any other agency. Is it the truest Americanism to flatter constantly that Americans ever always? Would it not be the right of nobility, if not of wisdom, to cause our people to think that it is foolish to be always cocksure of our superiority? Perhaps your observation of British papers has to a certain extent coincided with mine, that they are the first ones to cry out about any apparent back-sliding. The decadence of the empire has been predicted in my papers as much as it has been preached in the English journals. A good healthy criticism, even if unpopular, is a splendid thing for any land. Your incisive editorials on the Roosevelt administration are worthy of mention in this respect, and are worthy of the best traditions of the Harper publications. It seems to me that criticism of your stand simply

because it is not the popular one portakes of the *Macphersonian* variety, and you are the more to be congratulated. Keep the good work up.

I am, sir,

WALTER LEONARD BENNETT.

THE PUES OF SUFFRAGE

NEW YORK, May 21, 1902

To the Editor of Harper's Weekly:

SIR,—I notice in an editorial in your WEEKLY of the 9th that you say, "The true centre and focus of the suffrage movement is the Martha Washington Hotel." I would like to call your attention to the fact that the National Headquarters of the Woman Suffrage Association are at Warren, Ohio. There are three headquarters established in New York City: one by the International Council, which is at the Martha Washington Hotel; one the League of Self-Supporting Women; and the other the headquarters of the Progressive Union. All are good in character.

I am, sir,

HARRIET TAYLOR UPHAM.

WANTS PROOF OF IMMORTALITY

WEST HARTFORD, CONN., May 22, 1902

To the Editor of Harper's Weekly:

SIR,—I refer to the "Correspondence" in your issue of April 29 and the letter of Mr. Donald Hudson, in which he takes up the further discussion of spirit phenomena, suggested by the article in your issue of February 29, entitled "Touching Hands with Eternity." In this letter Mr. Hudson says, "I would give everything I have if I could be satisfied that death ends all, because eternity seems long and tiresome. The reward of the grave appears to me so perfect that I cannot conceive of anything better."

It is easy to understand the desire for rest, and equally easy to conceive how this need might be met, either by a long period of rest for the weary spirit, or by an instantaneous and absolute renewal of spiritual power and rest of life. But what I am completely at a loss to understand is a willingness to give up life, to go out of existence, when more abundant life is, to me, the world's natural cry. All the dear close ties of kin—for the heart's love must speak first—I long unavailingly for their continuance. Then this great and marvellous universe—the birth and growth and death of the planetary system, and all the wonders of the telescopic and microscopic world—I want to know more of it all, and as far as my finite mind can grasp the idea of eternity, it would not seem long or tiresome to me if I could only go on, even with such limited powers as I now have, to study these.

Hence arts, in graver mood

Revised, with finer harmony pursued.

Some one once asked President Willard of Harvard College, what he was going to do when he entered the other life, and he replied, "There are enough problems, mathematical, scientific, and spiritual, with the art of a circle to keep my mind busy and happy for at least a thousand years." Then the joys of art, music, architecture, sculpture, and painting—an eternity for each one would not seem too long; but it is all summed up in one word: life, full, abundant, thrifling life, with all the wonder and the depth of its infinite beauty and its infinite joy.

My own earnest wish is that it may be scientifically proven beyond any possibility of doubt on the part of the most hesitantly inclined, that death does not end all.

I am, sir,

MARY A. FARRINGTON.

All the proofs, so far, are too fragile to lean hard upon. Faith in immortality is inch-thin, and a far surer reliance than disposable "proofs."—KIRKTON.

NO MORE; NO LESS

STAY LANE CITY, TEX., May 22, 1902

To the Editor of Harper's Weekly:

SIR,—For many years I have been a subscriber to your paper; I do not regret adding, but heartily endorse all of the sentiments expressed in your editorials.

I am also a subscriber to *Human Life*, a magazine edited by Alfred Henry Lewis. In the last issue of *Human Life*, on page 17, I saw a reproduction of the likeness of John B. Rockefeller's father—under which is an article dealing into the mysteries of that gentleman's life. As a poor "refined slave" I would like to ask you one question: What right has the public to investigate Mr. Rockefeller's ancestry any more than it has the ancestry of any other private citizen?

I am, sir,

ROBERT REEDER.

SAMPLES, WE HOPE IN EVERY NUMBER

PORTLAND, R. I., May 22, 1902

To the Editor of Harper's Weekly:

SIR, HARPER'S WEEKLY says that Mr. Bryan cannot think right on points of subjects. It must follow, "as the night the day," that the WEEKLY can think right. It has given me a sample of Mr. Bryan's wrong thinking. Will it give me a sample of right thinking?

I am, sir,

JOSEPH McDONALD

Finance

Is the United States Inviting Capital?

By HOWARD SCHENCK MOTT

WHEN we do house-cleaning in this country we make a thorough job of it; few corners are neglected, and when we get started on these perilsous and much-needed jobs, the dust is kept flying. The air becomes thick, and some of the dust settles in previously clean places. Until we open the windows and wipe off the marble-panels our last condition seems worse than our first.

Perhaps at no time in the history of the United States was a house-cleaning more needed than it was three years ago. The disclosure of the instances of wrongdoing during those of the Interstate Commerce Commission's investigation of Union Pacific, and those of the Public Service Commission's inquiries into the affairs of Interborough Metropolitan, the room, that of the insurance companies, has been pretty well cleaned, but we are still left in the corners of the other two. A good deal of railroad reform work has been discovered and vigorously attacked, but the production of this particular form of dirt appears to have ceased, so that it is necessary merely to clear away that already made.

Last year the passion for cleanliness spread like a forest fire after a drought. The fact that a few houses were dirty led to widespread suspicion that filthiness prevailed in all. From the ranks of the earnest workers for real reform the mania for cleanliness was diffused, until an army of volunteers were in the field led upon discovering dirt whether it existed or not. The muck-raking magazines and our inspectors (Chief Magistrate) performed a real service to the community, although they may at times have forgotten that cleanliness was second to the goodness of fair play. Even the gentlemen in Boston, who alternately plays the rôle of the arch-enemy and the arch-friend of frenzied finance, most generously have given credit for pointing out some of the filthy places. In all these cases such credit as shall be given must be reluctant because of the methods employed. But when the passion for cleanliness took possession of an army of volunteers, made up of new-spapers, politicians, and well-intentioned people generally, who knew nothing about the goal of the popular crusade in which they were enlisted, the movement became wholly chaotic and unmanageable.

Of course the body of invested capital which had occupied corporate premises took fright and stampeded. In the stampede the securities of all corporations suffered from the withdrawal of capital, with little regard to whether a corporation had been well managed or not. Especially was foreign capital withdrawn from American securities. This was a more serious loss than might be supposed. Not only is a withdrawal of foreign capital felt by discredited corporations, but it painfully affects, through the international exchanges, the financial and industrial prosperity of the country. What method, then, will be found most effective to retain in this country the major portion of the gold imported last fall in payment for our staple products, so as to keep available for the needs of this country's enterprises the present supply of loanable capital? Is there any necessity for, and does any recent event constitute, an invitation not only to foreign but to domestic capital?

The lessons of last year's financial panic and present business depression, to the extent that those troubles were aggravated by over-diligent house-cleaning, almost seem to have been taken to heart by the country. In many directions there appears to be a growing opinion that we have done sufficient house-cleaning to make it advisable at least to alter the diet to settle thoroughly before taking a fresh start. We seem to be finding, too, that the withdrawal of capital from investments in securities is not a matter that the country can afford wisely to ignore.

In the last year or two, following the lead of the Administration at Washington, State highway laws have been passed in many States, and two-and-one-half-cent passenger fare laws, and State railroad commissions have been busy reducing freight rates, apparently on no other theory than that the railroads were merely depredators and unclean. In the South and the West popular sentiment ran high in its hostility to the railroads. When Governor Glenn of North Carolina found that the State passenger-rate law was not proof against an injunction from a Federal court in the case of two Southern Railway agents, he threatened to call out the militia to enforce the will of the people of that State. There was a great deal of inflammatory talk, and the Governor called to local prejudice on the question of State rights. The Southern Railway Company had a controversy with Governor Comer of Alabama over the passenger-rate law of that State, which for a time threatened serious consequences. In Arkansas, the State government proposed declaring forfeit the charter of the Chicago, Rock Island, and Pacific Railway Company for failure to observe the provisions of an unreasonable State law. The effort to cut out the supposed cancer of railroad oppression was energetic, and it had the support of public opinion.

Since then, of course, the Federal courts have very generally protected the legal rights of the railroads and other corporations,

and two very important cases involving the North Carolina and the Minnesota rate laws have been decided by the United States Supreme Court in favor of the railroads. These decisions undoubtedly had a far-reaching effect in deterring unreasonable legislation and agitation, and they may even, themselves, have influenced popular sentiment in some degree to subside. Yet, irrespective of the restraining influence of the courts, a curiously different attitude on the part of the public seems quietly to have grown within the past few months, and, with the approach of the Presidential campaign, politicians of all parties have been listening for the undercurrent of opinion resulting from that apparent change of attitude. Not long ago the Atlanta Constitution, one of the leading papers of the South, told its readers, in effect, that they had been punished by the withdrawal of capital from Southern enterprises in consequence of the popular prejudice against corporations, and that they should make every effort to induce capital to return. The most striking comment upon the recent special messages of the President is that they are "brief and free from vituperation." The Interstate Commerce Commission has recommended to Congress that the operation of what is known as the "community clause" of the Elburns rate Bill be suspended until January 1, 1910, so as to give to the railroads a little more time in which to untangle their coal lands and other miscellaneous property from their railroad property. There has even seemed to be considerable danger of an open rupture between the President and Congress recently, which really has significance chiefly because it exhibits a desire on the part of Senators and Representatives to find some means of protest against Mr. Roosevelt's vagaries without endangering the chances of Republican success in the fall elections.

There is still another notable movement. A campaign has been undertaken by business men generally against unreasonable legislation and popular agitation against corporations, or, in fact, against any sort of restriction that will delay the return of prosperity. The National Prosperity Association has been organized, and representatives sent out to Washington to confer with the President. Of course the meaning of the movement cannot be found in the ridiculous language of the address to the President or in that of his reply, nor even in the fallacious method of bringing about a return of prosperity by saying that depression shall cease to exist. But it can and probably will be found in the fact that business men have become tired of radicalism, and will throw the weight of their influence in favor of reasonable governmental methods. The formation of the association and the visit of its representatives to Washington will not be without effect upon the popular mind. In some respects this movement bears resemblance to the attitude of business interests throughout the country in the Presidential campaign of 1906. This work for conservatism may yet have an important bearing on the selection of candidates for office by one or the other or by both political parties this year, and may be an influence in determining the election.

If the foregoing shall be found to be a fairly accurate statement, from such indications as have come to the surface, of a tendency toward conservatism in the attitude of the public toward corporations, its importance cannot be overestimated. In an country of the world are lawmakers and politicians generally quite so responsive to public opinion, quite so keen in discovering indications of a change, as in this country. Our laws represent the will of the people, although they may be an exhibition of a temporary state of mind. Perhaps a confirmation of the tendency may be found in the manner in which the Presidential campaign now progresses. The selection of delegates to the Republican convention, Secretary Taft appears already to have a majority, and the chances to favor his nomination, and conversely the chances of a stampede for Roosevelt grow smaller. Few people will dispute the statement that Secretary Taft, with his judicial mind and governmental experience, would be a far more conservative candidate than Mr. Roosevelt, the democratic side the failure of New York, New Jersey, and Connecticut to instruct for Mr. Bryan, and what appears to be a growing tendency to push other and more conservative candidates to the front, looks as if some Democratic politicians realize the desirability of a conservative candidate.

What, it may be asked, is the direct and important interest of the political element in finance? Few students will claim that the political situation is the exclusively important factor. Unquestionably, however, it is a factor of great importance, for it represents at present the attitude of the public toward corporate enterprise. So far as capital was frightened out of corporate investments by popular hostility toward corporations, the slightest indications of a change in public opinion will be reflected by returning confidence, and returning confidence will mean more to the country than any other one thing. If, as many people believe, the establishment of our institutions is to be wholly changed so as to become socialist, this discussion may be idle; for capital will remain outside of the houses it has vacated. No amount of "manipulation" for higher prices in the stock market could then persuade capital permanently to occupy corporate premises.

For the Kingdom of California

THE TRUE STORY OF SAN FRANCISCO'S CIVIL WAR BETWEEN THE GRAFTERS AND THE ELABORATE FORCES OF THE PROSECUTION

II.—WHY WHOLESALE IMMUNITY WAS GRANTED TO THE GRAFTERS

By WILLIAM INGLIS

Nowhere else in the history of the United States has a more complete and thorough grafting of the city government of San Francisco in 1906. Graft wholesale and retail pervaded every department. It was clear to every observer that the graft machine, headed by Mayor Schmidt and manned by puppets selected from various labor organizations, and as representative members, but because they would obey all orders, was really dominated by Al Rief. In its sinister way the organization was perfect, a rapacious partner in every profitable species of vice and crime, an oppressor of all who refused to pay graft, and a ruthless plunderer of all individuals, firms, or corporations who sought leave to carry on legitimate business requiring municipal franchise.

Popular clamor against the grafters was universal. Citizens everywhere insisted that all the grafters must be punished. The manner of identifying the guilty was rather uncertain. Randolph Spreckels, according to the account given by his eulogists, finally determined, inasmuch as he could not induce fifteen, or ten, or even five men to act in concert with him, to constitute himself a committee of one, to reform and cleanse the city government and administer punishment to those who deserved it. He guaranteed \$100,000 for the expenses of the prosecution. Part of this sum he obtained by private subscription from citizens, but most of it came out of his own pocket. Up to the present the expenses of prosecution are estimated to have been nearly \$300,000, but the exact figures are not known.

It is necessary at this point to consider the nature and scope of the prosecution. Mr. Spreckels says that he organized it, dominated and still dominates it, solely in the interest of reform and civic parity. He is a young man, stalwart, energetic, of pleasant manner, persistent in following a course of action, and possessed of a fortune that is estimated at several millions of dollars. Popular sympathy was with him from the outset, and it is only recently that disaffection has occurred, since the people have begun to criticize his action in granting immunity to

EX-MAYOR SCHMIDT

WHICH, THOUGH THE ORNAMENTAL HEAD OF THE GRANT MACHINE, WAS RESEMBLED TO ITS ACTUAL HEAD, AL RIEF

Al Rief is not only false, but that it is mere rubbish. They say that if Rief would ever now "come through" with the truth as they conceive it they would convict and punish the corporation men. Also that they are actuated only by patriotic impulses; that they gave immunity to the confessed bribe-takers because that was the only way to convict others.

And here we come upon the very important question of motive. The officials of the United Railroads assert that Mr. Spreckels and

his associates have deliberately turned the forces of the State from the prosecution of grafters in the prosecution of United Railroad men, in order that by engineering them or driving them into exile the affairs of the company would be thrown into confusion, its securities would fall in value, and Mr. Spreckels and his associates might then buy the concern at a low price and take charge of all San Francisco's street transportation, thereby acquiring great financial profit, besides gaining political control of the rich State of California by virtue of their great success as reformers.

I put this proposition to Mr. Spreckels, and he denounced it as false.

"My motives," he said, "have been unselfish from the beginning, and I have no other aim than to serve the people of San Francisco. It is monstrous to say that I am trying to take possession of any public service corporation. I will not have anything to do with any such enterprise."

Francis J. Henry, the principal public prosecutor under Mr. Spreckels's direction, made similar denial.

"It's the same old cry," he said. "When I convicted the Oregon lumber thieves they raised the protest that I was working in the interest of a political conspiracy, and now that I'm after these corporation men they say I'm in a financial conspiracy. It's all booby."

As a confirmation of his theory that the graft prosecution was diverted from its original general design into an effort to ruin him and his associates, so that Mr. Spreckels and his fellow workers could buy the United Railroads cheap, and thus acquire the transportation business of San Francisco, President Patrick Calhoun, of the United Railroads, lays much stress on the fact that the Municipal Street Railway Company of San Francisco filed its charter on April 17, 1906, the day before the earthquake and fire. The principal owners of the company were Randolph Spreckels and James D. Schmitz. The plan of operation, as set forth by Mr. Spreckels in published interviews, was to compete with the United Railroads by running bus ten blocks at a time along the tracks of the United Railroads, then going around a block, and again using ten blocks of the company's tracks, paying therefor interest on the original cost of construction, as provided by law.

"But when they thought they could drive us out of existence by using the prosecuting power as a club," says Mr. Calhoun, "they dropped their Municipal Railway scheme and devoted all their energies to ruining us."

This also I submitted to Mr. Spreckels.

"The charge is untrue," he said. "The sole aim was to demonstrate that it was possible to operate cars efficiently and with profit by means of the underground trolley system. We were not going into a general competition with the United Railroads. The best proof of that is that we were ready to sell out to the city at any time. Our charter provided that we would turn over the road to the city whenever required, upon receiving the amount of our original investment, plus interest. We intended to make that demonstration in perfectly good faith; but after the fire the project was dropped."

It is a fact that nothing was ever done toward establishing the Municipal Railway lines after the fire.

Now let us consider the record of fact in the case. As early as

District Attorney Langdon HENRY WITH REMOVED ASSISTANT DISTRICT ATTORNEY GORE AND APPOINTED MR. HENRY IN HIS PLACE

November, 1903, Mr. Spreckels and his associate, James D. Phelan, a former Mayor of San Francisco, shrewd banker and possessor of millions of dollars, began an investigation of the misdoings of municipal officers. They found no legal proof of corruption, although moral proof was abundant. Their friend, Fremont Older, editor of a San Francisco newspaper, went to Washington and asked President Roosevelt to let Mr. Hiley go to San Francisco and help the reformers. The President was so sympathetic with the work of reform, but did not wish to take Mr. Hiley away from the prosecution of lumber thieves in Oregon. Mr. Older returned to San Francisco, and after some time discovered that Chinamen were importing Chinese women into California for immoral purposes. (This record is from Mr. Older's testimony in the Tevis hotel case.) When the discovery of this sinister crime was reported in Washington, Mr. Hiley was sent to San Francisco. With him he brought William J. Burns, long of the United States Secret Service, able detective, an expert in disguise and in fathoming mysteries. As a result of their activities several Chinamen were arrested and indicted. Their cases have never come to trial.

William H. Langdon, elected District Attorney on the Rud Schmitz ticket, was persuaded to resign. Assistant District Attorney Duke and appoint Mr. Hiley in his place. Mr. Langdon was at that time running for Governor on the Board Independence League ticket, and J. J. Dwyer, manager of the Board campaign, persuaded him. Mr. Langdon has ever since done his part faithfully in preventing his former associates. Detective Burns hired a secret headquarters, went to and fro himself, and sent his detectives among the hoodling supervisors, and early in 1904 had incited some of them in the taking of bribes. Of the secrecy and success of these methods, of the princely generosity of Mr. Spreckels in furnishing money for the bribes, much has been already published in newspapers, periodicals, magazines, etc., so the details need not be repeated here. The great thing was that in a concerted criminal transaction much evidence was obtained to convict three supervisors of bribe-taking; three out of the suspected eighteen—Boston, Walsh, and Loungrain.

"Big Jim" Gallagher, president of the Board of Supervisors, whipper-in of the grunting pack of hounds of which Alceus Ruef was master, now came over to the side of the prosecution. The manner of his coming over is in dispute. The prosecutors say that they had accumulated much proof of Gallagher's complicity that he was frightened into surrender. The corporation officials say that Gallagher was then struggling with Ruef for mastery of the pack and welcomed the chance to ruin Ruef, save himself from all possible danger, and gain other advantages.

Whether the astute Gallagher went out by appointment to the Presidio and made his deal with Mr. Spreckels, who met him there at night alone. The Presidio is the United States military reservation near the Golden Gate, and is outside of the jurisdiction of the State of California.

I understand that some of the supervisors have been trapped, and that they are to be set free immunitely if they help the prosecution to get the "higher-ups,"" said Gallagher.

"That is true," Mr. Spreckels replied. Gallagher thereupon pointed out, it is said, that the evidence of the three trapped men would do little or nothing toward convicting the "higher-ups," the title by which the prosecutors designated all the corporation officials they accused of bribe-taking. Gallagher promised that if immunity were granted to all the eighteen thieves supervisors they would all confess to Mr. Spreckels, and testify in court that Alceus Ruef had bribed them. Only in this way, it is said, he could have argued, could the prosecution hope to convict Ruef. Mr. Spreckels promised to give immunity to the eighteen on those terms. Not without storm and stress was confession obtained from all the eighteen hoodlums; but finally they went one by one to the secret headquarters of Detective Burns, made full confessions of how Ruef bribed them, and received their grant of immunity.

Not only did these eighteen thieves receive the immunity promised, but they were allowed by the prosecution to keep both their bribes and their public office, to still legislate for the city of San Francisco with Ruef's dirty dollars in their pockets. And this

William J. Burns

OF THE UNITED STATES SECRET SERVICE, WHO WAS BROUGHT TO SAN FRANCISCO BY HENRY DUKE TO ASSIST IN CARRYING OUT RUDOLPH SPECKELS' PLANS

unparalleled situation presents another problem in morals. The prosecutors say that they could not hope to convict anybody on circumstantial evidence alone; that it was absolutely necessary to accept all eighteen supervisors as State's evidence or get no confession at all, and that they expected through the testimony of the eighteen to convict Ruef, and through Ruef to convict the "higher-ups." The indicted guttle-serve corporation officials all declare that they are innocent; that the immunity granted them by the supervisors and a similar bargain with Ruef, which we shall presently consider, were part of a deliberate plan to procure false testimony against them, to convict them, and smash their companies so that Messrs. Spreckels, Phelan, et al., could buy these companies cheap, to say nothing of gaining political control of the State.

The mind unfamiliar with the virulent hates and unmeasured violence that accompany disputes in the cosmopolitan city of San Francisco recoils at the mere suggestion of any group of men seeking hurt to the expense of the liberty and reputation of their rivals. The prosecutors assert that they have tried and still are trying to put the corporation men in prison. Their motive, they declare, is solely the desire to do justice.

"Candidates that promised here," said Mr. Spreckels to me, "exist in every American city. We are doing all we can to abate them in San Francisco. We may have made mistakes, but all we have sought was to punish the guilty."

Having conquered the guilty supervisors and given them immunity in exchange for confession, the prosecution allowed them to remain in office. When Schmitz had been thrown into jail to await trial on many indictments, the guilty supervisors took care of their own number—Boston—to act as Mayor in place of Schmitz. At this there were great manifestations of popular disapproval, and all the hoodlums were put out of office. The corporation officials point to the retention of the confessed bribe-takers in office as a confirmation of their theory that the prosecution had entered into an alliance with these men in order to obtain false testimony against the "higher-ups."

"That theory is untrue and preposterous," Mr. Spreckels said to me. "The only reason for our allowing the guilty supervisors to stay in power was the fear that if we forced them out Schmitz would appoint equally corrupt men in their places. The power of appointment was his under the charter. There was no other course for us to pursue than the course we followed."

Next the prosecution sought to make Ruef "come through" with a confession; but this proved a long and trying task. Ruef could not be coerced. He was told he was unscrupulous. How the wily little lawyer was kept for months in a private prison under sentry so suspicious and strict that he could not even take a bath unwatched, how the watchers tried to break down his resolve by telling him he had stolen in his sleep, how they tried to shatter his nerves by keeping a brilliant electric light burning all night over his bed and by awakening him every little while to ask how he felt—these and many other measures used upon the little man have all been related in court and in public print.

Ruef grew thin, but he still refused to confess. At last the prosecution called in Rudolph Nieto, who appealed to Ruef's love for his family, and thus brought him to terms; for this grifter still had the utmost concern for the welfare of his aged father and mother and sisters. He broke down, and said he would "come through"—upon condition that he should receive immunity.

But the astute Ruef would not move in the dark. Messrs. Hiley, Burns, and Langdon promised him jointly and severally that if he confessed his guilt he should go free. But what of the judges before whom he was to be tried? Would they grant the District Attorney's motion to discharge him? In view of the agreement offered by the prosecution was that Ruef must plead guilty to the crime of extorting a bribe from a French restaurant-keeper, in return for obtaining a permit from the Police Commission enabling the Frenchman to carry on illegal traffic. Ruef denied having done this and protested against making any such plea. The prosecution told him that after he had pleaded guilty and testified in court to all his guilt, they would permit him to withdraw the plea and they would ask for his discharge. This was a large contract. Ruef would not move without assurance that the court would sanction it and carry it out. Messrs. Hiley,

Burns, and Langdon gave him their word on it. Reef was not satisfied.

"You can rely upon the reverend gentlemen," was the next assurance the prosecutors gave him; and thereupon Burns arranged a meeting at midnight at the Temple Shomrith Israel, in which the Superior Court was temporarily held, between Rabbi Jacob Nieto and Bernard Kaplan, as Reef's representatives, and Francis J. Heney and Judge Frank H. Dunne of the Superior Court. What occurred at that meeting is related by Rabbi Kaplan in an affidavit as follows:

"Mr. Heney said in effect to Judge Dunne: 'We are negotiating with Mr. Reef to "come through," and we want him to plead guilty to the charges now on trial before you. We may ask you to allow him to withdraw that plea and to substitute the plea of "not guilty" and dismiss the indictment against him.' To which Judge Dunne substantially replied as follows: 'I have every confidence in the District Attorney's office, and will do what you ask.' Thereupon I asked Judge Dunne whether I was to understand that if Mr. Reef pleaded 'guilty' he would permit and consent to the plea being withdrawn and the plea of 'not guilty' substituted and the indictment 'dismissed,' to which he answered, 'Yes, sir; yes, sir; certainly.' After that, as the Judge was about to leave the room, I again asked him, in effect: 'Your Honor, do you mean to say you would allow the plea to be withdrawn and dismiss the case?' To which the Judge responded, 'Yes, yes; certainly,' and took his departure."

The rabbi and Prosecutor Heney had a similar interview with Judge William P. Lawlor, of the Superior Court. Judge Lawlor interrupted Heney when he began to talk about "certain cases which will come up in your court." No name was mentioned.

"I do not wish to go into any particulars," said Judge Lawlor. "I have confidence in the District Attorney's office, and so long as I have confidence in the District Attorney's office it has been the practice of the Court to act favorably on any recommendations or requests of the District Attorney's office in open court."

With these assurances of safety the wily Reef at last capitulated. How his dramatic confession in court at the trial of Schmitz was delivered as the result of Detective Burns's secret stage management, how the Reef immunity contract was long concealed from the public, how the tardy revelation of the contract resulted in a revolution of public sentiment, will be taken up in the article which will appear next week.

A Building to Promote Pan-American Peace

REPRESENTATIVES of the twenty-one republics of the Western Hemisphere were present at the recent laying of the cornerstone of the projected Pan-American building in Washington, by President Roosevelt. The structure is to be erected for the use of the "International Bureau of the American Republics," which is intended to further good will and mutual understanding in the three Americas. The site of the building is that of the historic Van Ness mansion on Pennsylvania Street, halfway between

the War, State, and Navy Department Building and the Potomac River. It is in part the gift of Andrew Carnegie, who contributed \$750,000 toward the expense of its construction. In addition to the President, Secretary of State Root, Mr. Carnegie, and John Barrett made speeches. Cardinal James Gibbons delivered the invocation. The proceedings were culminated by a disagreement between Mr. Roosevelt and Mr. Carnegie concerning the immensity of universal peace.

The Conference with the Governors at Washington

(See illustration on opposite page.)

THE Governors of forty-four States of the Union assembled in the East Room of the White House, on May 13, at the opening of one of the most remarkable conferences in the political history of the nation. The meeting was arranged by President Roosevelt for the purpose of discussing plans for the conservation of the nation's natural resources. Many distinguished guests were invited to attend, and these included: Justice Harlan, Brewer, White, McKenna, Holmes, and Day, of the Supreme Court; Andrew Carnegie, James J. Hill, John Mitchell, Attorney General Bonaparte, and William J. Bryan. Five candidates or near-candidates for the Presidency of the United States were among the conferees: Alvanor J. A. Johnson of Minnesota, Governor Hughes of New York, Governor Folk of Minnesota, Vice-President Fairbanks, and Mr. Bryan.

President Roosevelt opened the conference with a speech in which he defined its purpose as follows:

"This conference on the conservation of natural resources is in effect a meeting of the representatives of all the people of the

United States called to consider the weightiest problem now before the nation.

"This nation began with the belief that its landed possessions were illimitable, but already the limit of unutilized land is in sight, and indeed but little land fitted for agriculture now remains unoccupied, save what can be reclaimed by irrigation and drainage. We began with an unapproached heritage of forests; more than half of the timber is gone. We began with coal fields more extensive than those of any other nation and with iron ores regarded as inexhaustible, and many experts now declare that the end of both iron and coal is in sight.

"The more increase in our consumption of coal during 1907 over 1906 revealed the total consumption in 1907, the Centennial year. The enormous stores of mineral oil and gas are largely gone. . . .

"Finally, we began with soils of unexampled fertility, and we have so impoverished them by injudicious use and by failing to check erosion that their crop-producing power is diminishing instead of increasing. . . .

The husband willing but the wife reluctant

It is nothing but a partitioned room on the fourth floor of the Educational Alliance building, that stands upon East Broadway at the confluence of many highways and arteries. Outside, the Italian peasant-vendor who has unwittingly strayed into this hostile maze, where the small boys pass the waves by for fillets and raisins, sends up his plaintive appeal. Carts clatter below, doors slam, school-children shout at play, footsteps resound on the stone stairs outside to furnish that setting of commonplace things among which tragedy is concealed. And the sun always shines through the clear window panes and is reflected from the white, glaring walls, as though to accentuate the wretchedness of those patient waiters who fill the lines of chairs. Here are bowed men, bewinged old women, young girls carrying infants; and day by day the thousand sorrows that haunt the homes of the ghetto are passed forth into the ears of the officer presiding inside the small office behind the partition.

The Legal Aid Bureau is a department of the Educational Alliance, and one branch of this takes up cases of domestic troubles and wife desertions. Its work has increased so rapidly that the 2546 cases handled in 1902, the year of its inception, increased to 22,084 during 1907.

From twelve to fifteen thousand of such cases are handled annually in the eight police courts of Manhattan and the Bronx. The great majority of these occur among the immigrant poor. The wealthy citizens engage attorneys to take their cases to the Supreme Court; but the poor women who cannot afford the luxury of a lawyer is forced to go to the police court, where she is often subjected to humiliations and indignities, and brought into contact with thieves, drunkards, and confirmed criminals. Often unable to speak or understand English, at the mercy of the interpreter, in fear of the police officers, and with a magistrate who has neither leisure nor means to make a searching investigation and must reach a rapid decision, she is often the victim of injustice. Not even if she wins her case is she better off than before. If she has a cruel or drunken husband he is sent to Blackwells Island, the family is broken up, the children are committed to some institution, and her last condition becomes more desperate than the first.

It is here that the punitive function of courts of law makes justice an injustice. Picture a court of reconciliation rather than of punishment, a court not backed by the authority of the law, presided over by an official clothed with no power to enforce his decrees; inquisit husband and wife resorting thither in mutual anger and departing in reconciliation. litigants who come breathing destruction and threatening enforcement of claims and arrive at an amicable compromise, and you will appreciate the surprising achievements that the Court of Sorrows accomplishes. For these poor who bring thither their wrongs for adjudication are very helpless; unable to think for themselves, they pour out their hearts with impudent confidence in their listener; they need only a little earnest counsel and the resolution of their wrongs to true propensities, and tears of anger become tears of pity and grief; the basest passions are transmuted into the gold of goodness.

The Court of Sorrows

A TRIBUNAL WHICH AIMS AT RECONCILIATION, NOT PUNISHMENT

By VICTOR ROUSSEAU

DRAWINGS BY HENRY KALEIGH

Domestic troubles, and especially desertions, are in chief measure due to ignorance, misunderstanding, and a misconception of the mutual obligations of parents. Since 1903 desertion has been a felony where there are in the family children under the age of sixteen years, thereby rendering the deserter liable for extradition. But neither the police nor district attorney can devote the money or time to tracing deserters by reason of the flood of more urgent business. Furthermore, the apprehension and imprisonment of the offender are no boon to the wife and family. It is by methods of conciliation that the Legal Aid Bureau prevents desertion, and, when it has traced the deserter, effects a friendly solution of the troubles that caused it.

"Rosenstein, Number 500," calls the girl clerk, handing a type-written form and an appended report of the investigator to the presiding officer. A pale girl who has sat silently in one corner steps noiselessly inside the small office partitioned off from the main room. Her dark hair is plastered down over each temple, her large eyes follow the judge with a pathetic motion, and the mate with its broken bridge, which would in most women appear a deformity, only adds to the wan interest of her face. Her husband has deserted her.

"What is your man's name?" asks the presiding officer in Yiddish.

"Aaron."

"Where is he living?"

"In Brooklyn."

A string of questions and answers follows. They were married, it appears, three years ago, and have two children. Two months ago he deserted her. There is a sister-in-law with five sons named Abram, Joe, Morris, Isidor, and Leopold, who was going to patch things up, but she sold her furniture; and her uncle, who came from Austria in the steerage, . . . From this voluminous detail the essential features are gradually unveiled. Her husband has been located in Brooklyn, where he is working in a bakery.

"Would you be willing to live with him again if he comes back?"
She bends her head slowly, and a half smile appears.

Resolved upon divorce—until they have seen the judge

grotesquely upon her face, which is the embodiment of misery. I have seen that smile somewhere—

She hands up photographs, poor, faded things, of her husband and herself in wedding finery. Yes, she will take him back, because of the children. Suddenly she weeps; and simultaneously a typewriter outside clacks hideously, punctuating the pauses of her grief.

"Can your husband read or write?"

"He can't write, but he can read."

The judge dictates a letter to the stenographer.

"If you write to my man he will run away and—"

"Never you mind. I know what he's at."

The letter is written. "Come here on Tuesday, and he will be here to meet you."

The faint smile appears once more as she rises to go. I know it now—

"That's no deservise," says the judge. "He had no money; he couldn't get a job, and run away in despair. Then he was afraid to return. Now it will come out all right; he will be glad to go back to her."

It was the smile of the Mona Lisa.

"My name's Sam Cohen," says a jolly, red-faced man.

"What's the name of the man suing you?"

"I can't remember. It's one of those foreign names; something like Nonschilowitz. If I come face to face with that scoundrel—"

This is a claim for damages on account of wrongful dismissal.

But Nonschilowitz does not appear, and in his place a sundering, sniping woman appears. She is garbed in black, save for five scarlet plumes that dangle from her wide, plumed hat.

"I want to ask a little legal advice," she whispers cooly. She hesitates.

"What is your name?"

"Beetree. Oh, you mean my maiden name. I'm Mrs. Goldstone. Now it's like this. He's such a fickle man, we can't agree, don't you know, and—"

"What do you want?"

"Why, it's like this. He's such a fickle man. One moment he

The deserted wife

says he'd like to get a divorce, and the next he wouldn't. I can't understand the man, don't you know?"

"Have you any children?"

"No, sir," she simper.

"What is your husband's occupation?"

"He's such a fickle man. I believe he's a night policeman now."

"How long have you been married?"

"Five years, but we don't live together. You see it didn't last very long, only a few weeks. When he calls at our home—yes, sir, I live with my parents—he's so polite and agreeable they can't help liking him. But he's such a fickle man, and it's out of sight, out of mind," you know."

"How about you? Aren't you fickle?"

"Oh no, sir. I'm not fickle; indeed, I'm very firm."

"Well, what do you want?"

"I don't know what I want."

Sam Cohen, who is still waiting to demolish Nonschilowitz, sighs in disgust and leans resignedly upon the radiator.

"Do you think he'll come here if I write to him?"

"I don't know, sir. He's such a fickle man you can't understand him."

"Suppose you find out what you want and then come back."

"Mr. Nonschilowitz!" calls the girl clerk. Sam Cohen leaps up.

"Mr. Nonschilowitz! Mr. Nonschilowitz!" No answer. Sam Cohen relaxes his clenched fist, and the glare goes out of his eyes.

"She came in here to get advice about something and changed her mind," says the judge. "She'll come back again soon."

A husband and wife enter, he angry, she scornful. They have been married two years, she claims, and he will not support her. He plays cards, frequents dance halls, and beats her. She wants him to leave her alone.

He tells his story, and she sits at his side in scornful silence.

She is attractive beyond the women of the East Side; and her heavy-lidded eyes hold exotic and alluring glances as she looks askance at her husband's auditors. When he is most vehement she folds her unadorned, immature hands; when he adjures she laughs. These are danger signals.

It is a comic tragedy. He lost his job and could not support her. Yes, he dines with girls, but he is giving lessons at thirty-five cents nightly. (She laughs.) One morning she had awakened him at six and told him she was going to sell the furniture. He locked the bureau drawers and beked her in the flat. When he came home that night the flat was empty. Subsequently he saw her leaning out of a window with a strange man, and rushed into the house and struck her. (She laughs hoarsely.) The judge looks grave.

"He followed me for three years and made me marry him," she says, not troubling to deny the man's story. "I am tired of him."

The Room of a Hundred Sorrows, where the East Side's unhappy ones gather

The instalment was overdue, and the furniture has been taken

The judge begins a kindly lecture to the pair of discontents. "Don't you both understand that you have certain duties?" he asks. "You have a child; you cannot afford to separate."

"She don't care for the child, judge. She wants to be a lady."

"Will you live with her if she is willing?"

"I will, judge."

"Will you live with your husband if he gets a job?"

"I don't want to live with him or see him again. I'm tired of him."

The judge addresses himself to the husband.

"I quite understand how your wife feels," he says. "You didn't support her, and she felt hurt and thought she had a right to see any other man she pleased. Now I'll tell you what to do. As soon as you get a job, bring half your earnings here every week and I'll take care of them for you. Come to me—don't go to her or try to see her. Then, when you've saved up a small sum I'll send for her to meet you. Will you come here in six weeks from now?"

addressing himself to the girl.

"What's the use? I don't want him."

"Never mind. Will you come?"

"Oh, I'll come," says the girl, indifferently.

We discuss them eagerly when they have gone.

"You'll never get them together, judge," says the artist.

"You'll see that I will. I understand her thoroughly. Of course there's more in the case than the husband suspects, but we've got to keep them together. As soon as she begins to see money she'll change her mind."

We do. "She wants to be a lady"—six words that sum up many a domestic tragedy.

"And he was jealous and beat her and she remains indifferent. You'll never bring them together."

"Come back in six weeks and you'll see," the presiding officer answers as we rise to leave.

"Mr. Nonshilovitz! Mr. Nonshilovitz!" calls the girl clerk. A giant of the steppes rises, shakes himself, and strides forward like a tall tower. Inside the private room Sam Cohen is standing with fists clenched and blazing eyes.

"Are you Mr. Nonshilovitz?" the girl clerk asks.

"Ja, I'm his brother; he sent me," answers the giant, entering.

We pause at the door and listen expectantly, but all is silence inside the judge's room.

Germany in Transition

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR 'HARPER'S WEEKLY'

THE last has not yet by any means been heard of the Harries case. Of those concerned in it, Count Moltke, though nominally cleared, is still in official disgrace; so, too, is Count Hohenhausen. Count Lamsar was recently sentenced to a term of imprisonment; Prince Falkenberg has been arrested for perjury in connection with his evidence at the trial; and Herr Harden, on April 22, won a libel action against a Munich paper which declared that he had received much money from the prince to the extent of \$250,000. The result of that action, and of the declaration of the judge that Herr Harden had successfully proved that he was in possession of incriminating evidence against Prince Falkenberg, can only be to prepare a case which for the last eighteen months has filled Germany with the most painful interest. I have no intention of going into any examination of the numerous details that have already been revealed or into any forecast of those that still await publicity. Every one will remember their general trend, and that, for my present purpose, is enough. I merely wish to consider the whole wretched scandal as one among many other factors that Germany is in the throes of a profound transition.

There is perhaps no nation that has altered within a single generation in so many essential qualities as Germany. Material prosperity suddenly descending upon a country devoid of a solid living and high thinking has brought the spirit of materialism in its train. The utilitarian and the love of science and knowledge for their own sakes that distinguished the ante-bellum generation, and constituted Germany's high, austere, and distinctive claim to honor, have been replaced by a bald and repellent utilitarianism. The Germans are no longer the greatest readers in the world. They seem, indeed, to be in some danger of developing for books and book-reading an almost English contempt. That intellectual cosmopolitanism which used to be one of the most admirable and attractive of German traits has vanished along with the dazzling succession of authors, scientists, and philosophers who were its embodiment, and the unworldly professors who fostered and perpetuated it. A new luxury, restlessness, discontent, and chauvinism have invaded all classes. The Germany of to-day, pursuing wealth with a more than previous ardor, has cultivated with assiduity, and with unobtrusive success, the virtues and what Burke called "the solemn plausibilities" of life, has become more polished, more ceremonious, more preoccupied with the small niceties and embellishments of social intercourse; but has lost, or is rapidly losing, the old simplicity and purity of manners.

Craves against poverty and mortality have multiplied in Germany in the last thirty years with an appalling rapidity. Financial juggleries have kept pace with them. Berlin is the most cosmopolitan and the most corrupt of European cities, and shows a coarseness of depravity that is not, I think, equalled anywhere. The Germans have rushed into city life just at the time when they are losing their spiritual faith in theories of moral restraint. The influence of the Socialist temper is not to be sought in politics alone; it has infiltrated at least a third part of the German nation with the religion of the crudest materialism. The great city on the Rhine which a generation ago was little more than a placid village shows in its style of life, its rents, its exuberant architecture, its restaurants and hotels, its strident round of gaiety, the vastness of the distance which Germany has travelled in the last generation. Unity, prosperity, and imperialism have wrought a deep and visible change in the character and social outlook of the German people. Pervasive literature of the most scintillating and debasing quality is becoming a greater evil in Germany than it ever was in France. The marriage age among the higher classes grows later and later. The number of unmarried women of a marriageable age—estimated at considerably over two millions—has increased in divorcee companies, a growing social and moral misanthropy; and the many scandals of recent years among the aristocracy, which is always and in all countries the first class to show the taint of corruption, point to an unmistakable lowering of the standards of national morals. I do not say all believe and the disease has yet penetrated far. To talk of the Germans as decadent is ridiculous to those who know them. No decadent people has ever increased at the rate of a million souls a year, while at the same time reducing the rate of mortality. The foundations and structure of the nation are still in the main sound, and German life and character still retain most of their old vigorous purity and hardihood. In work, in discipline, in research the Germans are still the foremost of living peoples. But there has been a change, and a change that, in spite of periodic reactions, will almost certainly continue. The revolution of these successive trials that have sprung from Herr Harden's attacks upon the court scandals are symptoms—extreme symptoms, atypical symptoms, it is true, but still symptoms—of a real and pervasive deterioration. The age of German Stieglitz has passed; that of German Epimenides has begun. We may, and probably will, be before long a broken, exhausted, such a condition as in the England of the eighteenth century led

to the Methodist revival. Meanwhile Germany continues in a phase, an enigmatic and unpleasant phase, of moral transition.

But it is not alone in the sphere of social life and morals that an observer comes across the tracks of a sweeping revolution. Looked at broadly, Germany is seen to be trying to solve three distinct but intimately related problems. The first is to become a great naval, commercial, and colonial Power. The second is to adjust her domestic policy to the fact that every year finds her passing more and more decidedly from a mainly agricultural to a mainly industrial state. The third is to establish a working compromise between the cry for universal suffrage on the one hand and the fact of a semi-aristocratic rulership on the other. The first of these three problems is on a fair way to solution. The last general election set the seal of national approval upon the policy of imperialism in all its many forms. The Social Democrats alone consistently oppose it, but their power is for the moment under an eclipse, and will never, in my judgment, be strong enough to restrain the deep-seated instinct towards naval, commercial, and colonial Empire. For all practical purposes the ideal of a Greater Germany and of the unaltered activities and ambitions it comprises may now be accepted as included in the will and consciousness of the German people.

The second problem—that of devising an equitable political balance between the interests of industry and of agriculture—is far more difficult. It has been greatly complicated by the ascendancy of the Agrarians—an ascendancy they have owed partly to the economic stability in a material sense of keeping the peasant on the soil, partly to the many strong links of social and political sympathy that have always united the nobility and the crown, and partly to their thoroughgoing acceptance of the policies of imperialism. Now, however, that imperialism has ceased to be a *tabula rasa*, Agrarians renounce the struggle between Liberalism and the industrial interests on the one side, and the Conservatives and land-owning interests on the other, is destined to take on a sharper intensity. A great and complex fight is on for the control of Germany's development. It is sixteen years since Caprivi declared that Germany was "no longer an agricultural but an industrial state." The last was scarcely arguable even then; it is indisputable now; and with the increasing population, her growing dependence upon foreign food-supplies, and her vast expansion of manufactures, it will soon be accepted by all Germany as axiomatic. But it is a fact which the imperialists, Agrarians and industrialists, have hitherto kept from any adequate translation into terms of policy. A new economic order has arisen, but the policy of the state has not yet been adjusted to it. Preposterously industrial as she is, Germany is still for the greater part ruled in the interests of agriculture. The Agrarians have been relentless in their use of power. It is they who have been the real framers of the tariffs from 1879 till to-day. The increase in the corn duties, the restrictions upon the importation of live stock, the export premiums granted to sugar producers—are all their work. It was they who overthrew Caprivi. It was their house law forbidding all dealings in "futures" of whatever kind—a law recently modified to permit of transactions in futures of mining and industrial stocks, but not in corn and mill products—that has been the chief cause of the exodus of German capital, of the high German bank rate, and of the chronic instability of the German money market. Every commercial treaty they have fought and whittled down with all the weapons of political terrorism. It was their opposition that defeated the great schemes of canal development. They have, in short, pursued their own interests with a total blindness to the interests of all other classes, and with a success that will come to be looked upon by many as one of the miracles of politics. The measure of German discontent and of the growth of Social Democracy is very largely the measure and the product of Agrarian ascendancy. To reduce that ascendancy to legitimate proportions is one of the most axiomatic tasks that lie ahead of the country.

The third problem is the constitutional one. The German mind has long been at uneasy pance between the old ideal of order and the new ideal of liberty. The people are beating restlessly against the bars. They are asking for a share in the government commensurate with their power and intelligence. They are questioning the social and political status of the system under which a party monetary government serves merely as a cloak for personal rule. They are beginning to realize that the ballot as an end in itself is insufficient; that, divorced from responsibility, it is little more than a national phylinx; and that it affords no adequate security against the enfeeblement of a system of government to the interests of a single class or against the caprices and haphazard policies of absolutism. They are becoming impatient of a parliamentary régime without the party system, and of ministers responsible to the crown instead of to the people. They are working round to the conclusion that no Emperor, however patriotic, wise or characterful, however desirous, can be quite so safe a guardian of the national interests as the nation itself. There is, in short, a movement of opinion which is beginning to insist that the German people must themselves be the German government. That is perhaps the most interesting of the new ideas that are beginning to characterize the present transitional stage of Germany's growth.

A View of the Gunness Farm. The Crowd gathered about the "Death Patch" watching the Diggers

A COARSE, fat, heavy-featured woman forty-eight years of age, with a big head covered with a mass of mud-colored hair, small eyes, huge hands and arms, and a gross body with difficulty supported on feet grotesquely small—such is the description of Mrs. Belle Gunness, the extraordinary creature who ran the "murder farm" near Laporte, Indiana.

Murder for money was Belle Gunness's trade. She was a Scandinavian, came to this country when a girl, and married a fellow countryman, Max Svensen, in Chicago, in 1883. He died mysteriously in 1890. Iverson was hinted at, and exhumation suggested; but nothing was done. The woman collected \$8,500 insurance money, and two years later married Gunness. In 1902 she moved to Laporte.

Before three months had passed she had become feared and hated among the neighbors. "She was more a devil than a woman," said one of them, whose farm adjoined her own. When Gunness was found dead in December, 1902, with the back of his head crushed in, every one believed that she had murdered him. Mrs. Gunness alleged that a sausage grinder had fallen from a shelf and struck him. Her statement could not be disproved. She collected \$3000 insurance, and began her systematic trade in murder. Everybody knew that she was advertising for a husband. Strange men met her at the railroad depot from time to time, drove back to the farm with her, and disappeared. But nobody cared to discover the mystery. Belle Gunness and her three children were left severely alone. There was only one companion, the hired man Ray Lamphere, now under arrest, who worked on the farm, and he bore some too reputable a character. There had been another, decade then, an adopted daughter; but she was sent "to school in California" in September, 1900. At any rate she disappeared from view.

It was the disappearance of Andrew Helgeson that opened up the mystery. Helgeson had read Mrs. Gunness's advertisement, drew \$3000 from his bank in Aberdeen, South Dakota, and told his

brother Asle that he was going to Laporte to marry.

After two weeks Asle wrote to Mrs. Gunness to learn his brother's whereabouts.

"Dear good brother of the best friend I have in the world," the murderess wrote back, "it is with tears flooding in my eyes and my heart overwhelmed with grief that I write you about your dear brother. He is gone from me. I know not where. As I think of him my heart bleeds. May God bless him wherever he may be.

"Sell off everything that he owns, get together as much of your own money as you can, and come here during the first part of May. We will then go and seek him. Bring the money all in cash. It will be easier to handle in this way. . . . I will fly to his arms and never, oh, never be separated from him again. Do not neglect to bring the money in cash."

This letter was written on April 23. Five days later Asle Helgeson read that the Gunness home had been burned and that Mrs. Gunness and her three children had died in the flames. He took the train to Laporte and told Sheriff Smeater his story. Then Joe Maxson, a new hired man of the murderess, spoke about some "soft spots" in the garden. Digging began, and the first body turned up was the dismembered body of Helgeson.

A few feet away the body of a young woman, supposedly Jennie Olson, was found. In all five corpses were unearthed, three being of women. Whether Mrs. Gunness died in the fire or, as is believed, substituted a corpse, killed her children, burned down the house and fled, may be disclosed at the trial of Ray Lamphere.

Mrs. Gunness has willed her property, in reversion after her children's death, to the Norwegian Orphan and Children's Home in Chicago.

Mrs. Gunness with her Children, who were burned to Death

A Spirit in Prison*

A Novel

By Robert Dickens

AUTHOR OF "THE CALL OF THE BLOOD," "BARBARY SHEEP," ETC.

CHAPTER XIX

HERMIONE was not going to Mergellina, but to the Soglio di Frisco. She had only come out of her room late in the afternoon. During her seclusion there she had once been disturbed by Gaspare, who had come to ask her if she wanted him for anything, and if not whether he might go over to Mergellina for the rest of the afternoon to see some friends he had made there. She told him he was free till night, and he went away quickly, after one searching wide-eyed glance at the face of his patroness.

When he had gone Hermione told herself that she was glad he was away. If he had been on the island she might have been tempted to take one of the boats, to ask him to row her to the Soglio that evening. But now, of course, she would not go. It was true that she could easily get a boatman from the village on the mainland near by, but without Gaspare's companionship she would not care to go. So that was settled. She would think no more about it. She had met with Vere, and strove with all her might to be natural, to show no traces in face or manner of the storm that had swept over her that day. She hoped she believed that she was successful. But what a hateful, what an unnatural effort that was!

A woman who is not at her ease in her own home with her own girl—where can she be at ease?

It was really the reaction from that effort that sent Hermione from the island that evening. She felt as if she could not face another meal with Vere just then. She felt transparent, as if Vere's eyes would be able to see all that she most hid if they were together in the evening. And she resolved to go away. She made some excuse—that she wished for a little change, that she was fitfully and felt the confinement of the island.

"I think I'll go over to the village," she said, "and walk up to the road and take the train."

"Will you, mother?"

Hermione saw in Vere's eyes that the girl was waiting for something.

"I'll go by myself, Vere," she said. "I should be had company to-day. The island dog is at my heels."

She laughed, and added:

"If I am late in coming back, have dinner without me."

"Very well, madre."

Vere waited a moment, then, as if desiring to break forcibly through the restraint that bound them, put out her hand to her mother's and said:

"Why don't you go in to Naples and have dinner with Monsieur Emile? He would cheer you up, and it is ages since we have seen him."

"Only two or three days. No. I won't disturb Emile. He may be working."

Vere felt that somehow her eager suggestion had deepened the constraint. She said no more, and Hermione presently crossed over to the mainland and began her walk to the road that leads from Naples to Buzzeo.

Where was she going? What was she really about to do? Certainly she would not adopt the suggestion of Vere. Emile was the last person whom she wished to see—by whom she wished to be seen—just then.

The narrow path turned away from the sea into the shadow of high banks. She walked very slowly, like one out for a solitary stroll. A laurel clipped across the sunlit earth in front of her, almost touching her foot, climbed the bank swiftly, and vanished among the dry leaves with a faint rustle.

She felt quite alone to-day in Italy, and far off, as if she had no duties, no ties, as if she were one of those solitary, drifting, middle-aged women who vaguely haunt the beaten tracks of foreign lands. It was solitary in this path away from the sea, was not sharply conscious of the change of climate, the inland season, the falling away of the freedom from the air, the freedom that seems to exude from wave and wind of the sea.

She walked on, musing no more and still undecided what to do. The thought of the Soglio di Frisco returned to her mind, was dismissed, returned again. She might go and dine there quietly alone. Was she deceiving herself, and had she really made up her mind to go to the Soglio before she left the island? No, she had come away mainly because she felt the need of solitude, the difficulty of being with Vere just for this one night. To-morrow it would be different. It should be different to-morrow.

She saw a row of houses in the distance, houses of poor people,

and knew that she was nearing the road. Clothes were hanging in dry. Children were playing at the edge of a vineyard. Women were washing linen, men sitting on the stone steps smoking *macis*. As she went by she nodded to them, and bade them "Buona sera."

They answered courteously, some with smiling faces, others with grave and searching looks—or so she thought. The tunnel that runs beneath the road at the point where this path joins it came in sight. And still Hermione did not know what she was going to do. As she entered the tunnel, she heard above her head the rumble of a train going towards Naples. This decided her. She hurried on, turned in the right, and came out on the highway before the little lonely ristorante that is set here to recommend the view of vineyard and of sea.

The train was already gliding away at some distance down the road.

A solitary waiter came forward in his inevitable black into the dusk to sympathize with the signora, and to suggest that she should take a seat and drink some lemon water, or *passato*, while waiting for the next train. Or would not the signora dine in the upper room and watch the *trasmontare del sole*. It would be splendid this evening. And he could promise her an excellent *risotto*, *sardines* with *peppers*, and a *hildreck* such as certainly she could not get in the restaurants of Naples.

"Very well," Hermione answered, quickly. "I will dine here, but not directly—in half an hour or three-quarters."

What Artico was doing at the *Ristorante della Stella* she was doing at the *Trattoria del Giardinista*.

She would dine quietly here, and then walk back to the sea in the cool of the evening.

That was her decision. Yet when the evening fell, and her bill was paid, she took the train that was going down to Naples, and passed presently before the eyes of Artico. The evening of darkness had descended within her much of the mood of the afternoon. She felt that she could not go home without doing something definite, and she resolved to go to the Soglio di Frisco, have a cup of coffee there, look through the visitors' book, and then take a boat and return by night to the island. The sea wind would cool her, would do her good.

Nothing told her when the eyes of her friend were for an instant fixed upon her, when the mind of her friend for a moment wandered at the strange, new look in her face. She left the train presently at the doorway above which is Frisco's name, descended to the little terrace from which Vere had run in laughing with the Marchese, and stood there for a moment hesitating.

The long restaurant was lit up, and from it came the sound of music, guitars, and a voice singing. She recognized the throaty tone of the blind man raised in a spasmodic and sickly rapture:

"*Santa-Lucia-Luci-luci! Santa-Luci-luci!*"

It recalled her sharply to the night of the storm. For a moment she felt again the strange, the unreasonable sense of fear, indefinable but harsh, which had come upon her then, as fear comes suddenly sometimes upon a child.

Then she dropped into the restaurant.

As on the other night, there were but few people dining there, and they were away at the far end of the big room. Near them stood the musicians under a light; sadly, depressed; except the blind man, who lifted his big head, rolled his tongue, and scolded and growled scarily in an effort to be impudent.

Hermione sat down at the first table.

For a moment no one saw her. She heard men's voices talking loudly and gaily, the clatter of plates, the clink of knives and forks. She looked round for the visitors' book. If it were lying near she thought she would open it, search for what Emile had written, and then slip away at once unobserved.

There was a furtive spirit within her to-night.

But she could not see the book; so she sat still, listening to the blind man and gazing at the calm sea just below her. A boat was waiting there. She could see the cushions, which were white and looked ghastly in the darkness, the dim form of the rower standing up in search for clients.

"Basta! Basta!"

He had seen her. She drew back a little. As she did so her chair made a grating noise, and instantly the sharp eyes of the padrone caught a sound betokening the presence of a newcomer in his restaurant. It might be a queen, an empress! Who could tell?

With his stiff, yet alert military gait, he at once came marching down towards her, starting her with his big bright eyes. When he saw who it was he threw up his brown brows.

"The signora of the storm!" he exclaimed. He moved as if about to turn round. "I must tell—"

Copyright, 1907, by HARTN & BROSCH

But Hermione stopped him with a quick, decisive gesture.

"One moment, signora."

The padrone approached aristocratically.

"The Marchese Isidoro Panzeri is here dining with friends, the Duca di—"

"Yes, yes. But I am only here for a moment, so it is not worth while to tell the Marchese."

"You are not going to dine, signora! The food of Frisco does not please you!"

He cast up his eyes in deep distress.

"I asked it done. But I have dined. What I want is a cup of coffee, and a liqueur—now here. And may I look over your wonderful visitors' book? To tell the truth, that is what I have come for, to see the marvelous book. I hadn't enough time the other night. May I?"

The padrone was appressed. He smiled graciously and turned upon his heels.

"At once, signora."

"And—not a word to the Marchese! He is with friends. I would rather not disturb him."

The padrone threw up his chin and clicked his tongue against his teeth. A shrewd, though not at all impudent, expression had come into his face. A signora alone, at night, in a restaurant! He was a man of the great world. He understood.

What a mystery it was to be "cavalcade!"

He came back again almost directly, bearing the book as a sacristan might bear a black-letter Bible.

"Ecco, signora."

With a superb gesture he placed it before her.

"The coffee, the liqueur. Attend, signora, pour un petit moment."

He stood to see the effect of his French upon her. She forced into her face a look of pious admiration, and he at once departed. Hermione opened the book rather furtively. She had the unpleasant sensation of doing a surreptitious action, and she was as almost abnormally straightforward and womanly by nature. The book was large, and contained an immense number of inscriptions and signatures in hand-writings that varied as strangely as do the characters of men. She turned the leaves hastily. Where had Emile written? Not at the end of the book. She remembered that his signature had been followed by others, although she had not seen, or tried to see, what he had written. Perhaps his name was near Tolstoi's. They had read together Tolstoi's "Vred Napoli e poi morì."

But where was Tolstoi's name?

A waiter came with the coffee and the brandy. She thanked him quickly, sipped the coffee without tasting it, and continued the search.

The voice of the blind man died away. The guitars ceased.

She started. She was alone! The musicians would come down and gather round her. Why had she not told the padrone she wished to be quite alone? She heard the shuffle of feet. They were coming. Feverishly she turned the pages. Ah! here it was! She bent down over the page.

"La coscienza, c'est la quantité de science inutile que nous avons en nous."

"Nuit d'orage. Julia."

The guitars began a prelude. The blind man shifted from one leg to another, cast up his sightless eyes, protruded and drew in his tongue, coughed, spat—

"Cavalcade!"

Hermione struck upon the table sharply. She had forgotten all about the Marchese. She was full of the desire to escape, to get away and be out on the sea.

"Cavalcade!"

She called more loudly.

A middle-aged waiter came shuffling over the floor.

"The bill, please."

As she spoke she drank the brandy.

"Si, signora."

He stood beside her.

She was startled, and turned quickly

"La coscienza, c'est la quantité de science inutile que nous avons en nous."

EMILE ANTON.

"Nuit d'orage. Julia."

The guitars began a prelude. The blind man shifted from one leg to another, cast up his sightless eyes, protruded and drew in his tongue, coughed, spat—

"Cavalcade!"

Hermione struck upon the table sharply. She had forgotten all about the Marchese. She was full of the desire to escape, to get away and be out on the sea.

"Cavalcade!"

She called more loudly.

A middle-aged waiter came shuffling over the floor.

"The bill, please."

As she spoke she drank the brandy.

"Si, signora."

He stood beside her.

"One coffee?"

"Si, signora."

"One cognac?"

"Si, signora."

The blind man burst into song.

"One fifty, signora."

Hermione gave him a two-lira piece and got up to go.

"Signora—buenas noches! What a pleasure!"

The Marchese stood before her, smiling, bowing. He took her hand, bent over it, and kissed it.

"What a pleasure!" he repeated, glistening round. "And you are alone! The signorina is not here?"

He stared suspiciously towards the terrace.

"And our dear friend, Emile?"

"No, no. I am quite alone."

The blind man bowed, as if he wished to drown the sound of speech.

"Please—could you stop him, Marchese?" said Hermione. "I really—give him this for me."

She gave the Marchese a lira.

"Signora, it isn't necessary. Silenzio! silenzio! Posh-shah!"

He bowed sharply, almost

ludicrously. The audience abruptly stopped, and the blind man made a gurgling sound, as if he were swallowing the unfinished portion of the song.

"No, please pay them."

"It's too much."

"Never mind."

The Marchese gave the lira to the blind man, and the musicians went cheerfully out.

Then Hermione held out her hand at once.

"I must go now. It is late."

"You are going by sea, signora?"

"Yes."

"I will accompany you."

"No, indeed. I couldn't think of it. You have friends."

"They will understand. Have you your own boat?"

"No."

"Then, of course, I shall come with you."

But Hermione was firm. She knew that to-night the company of this young man would be absolutely unbearable to her.

"Marchese, indeed I cannot—I will not allow it. We Englishwomen are very independent, you know. But you may call me a boat and take me down to it, as you are so kind."

"With pleasure, signora."

He went to the open window. At once the boatman's cry rose up.

"Barcai barcai!"

"That is Andrea's voice," said the Marchese. "I know him. Barcai—si!"

The boat began to glide in towards the land.

As they went out the Marchese said:

"And how is the signorina?"

"Very well."

"I have had a touch of fever, signora, or I should have come over to the island again. I stayed too long in the sea the other day, or—" He shrugged his shoulders.

"I'm sorry," said Hermione. "You are very pale to-night."

For the first time she looked at him closely, and saw that his face was white, and that his big and bushy eyes held a tired and yet excited expression.

"It is nothing. It has passed. And our friend—Emile? How is he?"

A hardness had come into his voice. Hermione noticed it.

"We have not seen him lately. I suppose he has been busy."

"Probably. Emile has much to do in Naples," said the Marchese, with an unmistakable sneer. "Do allow me to escort you to the island, signora."

They had reached the boat. Hermione shook her head and stepped in at once.

"Then when may I come?"

"Whenever you like."

"To-morrow?"

"Certainly."

"At what time?"

Hermione suddenly remembered his hospitality and felt that she ought to return it.

"Come to lunch—half past twelve. We shall be quite alone."

"Signora, for loneliness with you and the signorina I would give up every friend I have ever had. I would give up—"

"Half past twelve, then, Marchese. Adieu!"

"A river! A river! A demand! And then, care of the signora. Treat her as you would treat the Madonna! Do you hear?"

The boatman grinned and took off his cap, and the boat glided away across the path of yellow light that was shed from the window of Frisio's.

Hermione leaned back against the white cushions. She was thankful to escape. She felt tired and confused. That dreadful music had distracted her, that—something else, her tricked expectation. She knew now that she had been very foolish, perhaps even very fantastic. She had felt so sure that Emile had written in that book—what?

As the boat went softly on she asked herself exactly what she had expected to find written there, and she realized that her imagination had, as so often before, been galloping like a frightened horse with the reins upon its neck. And then she began to consider what he had written.

"La conscience, c'est la quantité de science innée que nous avons en nous."

She did not know the words. Were they his own or another's? And had he written them simply because they had chanced to come into his mind at the moment, or because they expressed some unthought, or feeling that had surged up in him just then? She wished she knew.

It was a fine saying, she thought, but for the moment she was less interested in it than in Emile's mood, his mind, when he had written it. She realized now, on this calm of the sea, how absurd had been the thought that a man so subtle as Emile would flagrantly reveal a passing phase of his nature, a secret irritability, a jealousy, perhaps, or a sudden hatred in a sentence written for any eyes that chose to see. But he might covertly reveal himself to one who understood him well.

She sat still, trying to catch her subtlety against his. From the shore came sounds of changing music, low down, or falling to them from the illuminated heights where people were making merry in the night. Now and then a boat passed them. In one young men were singing, and interrupting their song to shout with laughter. Here and there a fisherman's torch glided like a great fiery arrow the city darkness of the sea. The distant trees of the garden climbing up the hill made an ebony blackness beneath the stars, a blackness that suggested impenetrable beauty that lay deep down with hidden face. And the lights dispersed among them, gaining significance by their solitude, seemed to summon adventurous or romantic spirits to come to them by secret paths and leave their revelation. Over the sea lay a delicate warmth, not tropical, not exulting, but wistfully inspiring. And beyond the circling lamps of Naples Vesuvius lit up the firmament with a torrent of rose-colored fire that glowed and died, and glowed again, constantly as beads a heart.

And to Hermione came a melancholy devoid of all violence, soft almost as the warmth upon this sea, quiet as the resignation of the fatalistic East. She felt herself for a moment such a tiny, dark thing caught in the meshes of the great net of the universe, this universe that she could never understand. What could she do? She must just sink down upon the breast of mystery, let it take her, hold her, do with her what it would.

Her subtlety against Emile's! She smiled to herself in the dark. What a combat of subtleties! She seemed to see two marionettes battling in the desert.

And yet—and yet! She remembered a saying of Flaubert's, that man is like a woman journeying on a camel through the desert; and he is the woman, and the camel—and the desert.

How true that was, for even now, as she felt herself to be nothing, she felt herself to be tremendous.

She heard the sound of oars coming from the darkness before them, and saw the dim outline of a boat, then the eyes of Emile looking straight into hers.

"Emile!"

"Hermione!"

His face was grave. But, yielding to her impulse, she made Andrea stop, and, turning round, saw that the other boat had also stopped a little way from hers. It began to back, and in a moment was level with them.

"Emile! How strange to meet you! Have you haven't been to the island?"

"No. I was tired. I have been working very hard. I dined quietly at Posillipo."

He did not ask her where she had been.

"Yes, I think you look tired," she said. He did not speak, and she added: "I felt restless, as I took the train from the Trastevere di Giardinetto as far as the Negligio di Vico, and am going back, as you see, by boat."

"It is exquisite on the sea to night," he said.

"Yes, exquisite; it makes me sail."

She remembered all she had been through that day, as she looked at his powerful face.

"Yes," he answered. "It makes me sad."

For a moment she felt that they were again in perfect sympathy, as they used to be. Their sadness, born of the dreaming hour, united them.

"Come soon to the island, dear Emile," she said, suddenly, and with the impulsiveness that was part of her, forgetting all her poise and all her shadowy fears. "I have missed you."

He noticed that she ruled out Vere in that sentence; but the warmth of her voice stirred warmth in him, and he answered:

"Let me come to-morrow."

"Do—do!"

"In the morning, to lunch, and to spend a long day."

Suddenly she remembered the Marchese, and the sound of his voice when he had spoken of his friend.

"Lunch!" she said.

Instantly he caught her hesitation, her dubiety.

"It isn't convenient, perhaps."

"Perfectly, only—the Marchese is coming."

"To-morrow? To lunch?"

The hardness of the Marchese's voice was echoed now in the voice of Artico. There was antagonism between these men. Hermione realized it.

"Yes, I invited him this evening."

There was a slight pause. Then Artico said:

"I'll come some other day, Hermione. Well, my friend, au revoir, and bon voyage to the island."

His voice had suddenly become cold, and he signed to his boatman.

"Avanti!"

The boat slipped away and was lost in the darkness.

Hermione had said nothing. Once again, why she did not know, her friend had made her feel guilty.

Andrea the boatman still purred. Now she saw him staring into her face, and she felt like a woman publicly deserted, almost humiliated.

"Avanti, Andrea!" she said.

Her voice trembled as she spoke.

He bent to his oars and moved on.

And now in the moon, and the camel—and the desert.

Yes, she carried the desert within her, and she was wandering in it alone. She saw herself, a poor, starved, shrinking figure, travelling through a vast, a burning, a waterless expanse, with an iron sky above her, a brazen land beneath. She was in rage, bereft, like the poorest nomad of them all.

But even the poorest nomad carries something.

Against her breast, to her heart, she clasped—a memory: the sacred memory of him who had loved her, who had taken her to be his, who had given her himself.

CHAPTER XX

THAT night when Hermione drew near to the island she saw the saint's light shining, and remembered how, in the storm, she had longed for it—how, when she had seen it above the muzzling sea, she had felt that it was a good omen. To-night it meant nothing to her. It was just a lamp lit, as a lamp might be lit in a street, to give illumination in darkness to any one who passed. She wondered why she had thought of it so strangely.

Gaspere met her at the landing. She noticed at once a suppressed excitement in his manner. He looked at Andrea keenly and anxiously.

"How late you are, signora?"

He put out his strong arm to help her to the land.

"Am I, Gaspere? Yes, I suppose I am—you ought all to be in bed."

"I should not go to bed while you were out, signora."

Again she looked Gaspere with her memory, saw the woman not quite alone on the journey.

"I know."

"Have you been to Naples, signora?"

"No—only to—"

"To Mergellina?"

He interrupted her almost sharply.

"No, to the Scoglio di Frisio. Pay the boatman this, Gaspere."

Good night, Andrea."

"Good night, signora."

Gaspere handed the man his money, and at once the boat set out on its return to Posillipo.

Hermione stood at the water's edge watching its departure. It passed below the saint, and the gleam of his light fell upon it for a moment. In the gleam the black figure of Andrea was visible stooping to the water. He was making the fisherman's sign of the cross. The cross on Poppino's face—it was an emblem of the cross that carried with it the face of Francesco's blessing? Were it impossible! She turned to go up to the house.

"Is the signorina in bed yet, Gaspere?"

"No, signora."

"Where is she? Still out?"

"No, signora."

"Did she drink I was told?"

"Signora, the signorina is on the cliff with Ruffo."

"With Ruffo?"

They were going up the steps.

"No, signora. We have all been together."

Hermione guessed that Gaspere had been playing chamberlain, and loved him for it.

"And you heard the boat coming from the cliff?"

"I saw it pass under the saint's light, signora. I did not hear it."

Well, but it might have been a fisherman's boat."

"No, signora. And it might have been your boat."

The hour of this faithful watcher was unmeasurable. They came up to the house.

"I think I'll go and see Ruffo," said Hermione.

She was alone in the house. Gaspere stood immediately below her. He did not move now, but he said:

"I can go and tell the signorina you are here, signora. She will come at once."

Again Hermione noticed a curious, almost dogged, excitement in his manner. It recalled to her a night of years ago when he had

(Continued on page 28.)

The Pastimes of Madmen

By Helena E. Meyer

One of the most interesting of the Paris institutions is that of the insane, established by Dr. Marie, head surgeon of the men's section of the asylum at Villejuif. Dr. Marie is the physician who introduced the system by which the harmless lunatics and the idiot are separated from the more violent types, and permitted to follow their harmless pursuits in the belief that they are living at home in freedom.

Under this system the first task of the doctors and nurses is to distract their patients from the "lived idea," when gentle treatment, indulgence, and the required régime have reduced the patient to relative calmness, he is encouraged to make himself at home, to act freely—if his impulses are known, and to do any kind of work that will please his fancy. As the result of this wise system, most of Dr. Marie's patients follow some favored trade. Men of artistic bent make in clay, paint, or carve wood. In a study of music, Dr. Marie declares that his experiments have convinced him that one of the best ways of retraining a madman to captivity is to encourage in him the development of his natural gifts. A madman forgets his obscuring evil when intent on an agreeable task.

A few years ago the first prize offered by the Academy of Sciences fell to a man confined in the madhouse at Charenton; at another time an engineer in the lunatic asylum at Villejuif was second in the open competition for the design of the Metropolitan Railway station in Paris.

Usually the state of madmen is indelible. It is often anarchic, and almost always irrational. The chief defect is greater or less lack of perspective and proportion. For instance, an architect who has lost his reason often imagines that a house ought to be as broad as the top than at the bottom.

A sense of art is often developed for the first time in the insane. Men who have never drawn a line discover the artistic instinct as soon as they have been placed in confinement. But their work is always similar to the attempts of primitive races. There are "Apes" or "Ape-men," who make a sketch of his life as he understood it. He began by making a picture of the woman he had loved. Then he remembered that before he met her he had lived in Africa, Africa made him think of palm trees and pyramids; and pyramids made him think of Napoleon. His picture was an extraordinary mixture of palm trees, negroes, pyramids, and Napoleon invoking the centuries to encourage men to kill one another.

One of the patients, an insane physician, can manufacture balloons and balloons resembling the weapons used in prehistoric times. As he is too violent to be trusted with any sharp instrument, he makes his tools by breaking one piece of flint against another, or by rubbing two pieces together to wear them down to the required shape. Having shaped them to his intention, he fixes them in handles made of palm trees, or jessamine wire, or leather strips made from the scales of old shoes. Some of the ingenuity exhibited by the violent insane gives cause for grave anxiety. It is impossible to catch an ingenious homicidal madman; he will not pick up something at some time to shape into a dangerous weapon. Some of the "harmless" cases demand surveillance by night and day.

Some of the inventions of the insane are of scientific value. A patient at Villejuif invented a "purification machine" by combining a bottle, a plank, and small metallic tubes, to which he had fitted funnels. Having set up his machine, he produced lavatories of the size of a man's bed. The result was good—so good that it was decided to make the machine known. One day when it was in action the doctor suggested taking a photograph of it. The inventor waited until he perceived that a woman; then he fell upon the machine, weaved it apart, and trampled it underfoot. The invention—an exceedingly useful one—was lost, because no one had seen him make it, and no one dares speak of it to him. To allude to it is to bring on a furious attack. Most

lunatics, no matter how contented they may be, generally cherish a futile longing to escape. They collect wax from the polished floors, take the impressions of locks, and make keys from empty sardine boxes, upon which, or anything to be found, Dr. Marie's museum includes a collection of knives of strange and unusual shapes. Some of them have blades made from pieces of glass or slate and set in handles of carved steel. Objects harmless in themselves become dangerous weapons through the ingenuity of the inmates.

Insane sculptors are as common as insane painters. The insane sculptor hews out coarse statuettes, fantastic animals, grotesque little human figures, and so on. An evanescent career all his own home. That his old trade is still in his memory is shown by the little scenes that he makes out of the smaller pieces of bone. He works all day at his senseless and ridiculous task. Another lunatic, who believes he is the incarnation of the soul of Beethoven, passes his time carving up men out of wood. Each pair of his creations are joined together, one at the necks, none at the shoulders.

Lunatics have been treated with great brutality in the past, but happily those days are over. There is no stronger proof of human progress than the modern treatment of the insane. In the comfortable asylums where doctors and nurses find their chief efforts on behalf of their charges the madman is allowed to cherish his whimsies. What an advance since the days of the great Plague!

BY MAKING THE BABY STRONG

Gives milk curdles in the most easily digested form all the elements necessary to the building of flesh, bone and blood. It is the best food for infants and the only one that is both pure and healthy. It is the only one that is both pure and healthy. It is the only one that is both pure and healthy.

THE BEST ALL-ROUND FAMILY LINIMENT: "BROWN'S HOLY-SHIRT-FACED" is a remedy for all ailments.

Use BROWN'S Compound, the famous REMEDY for all ailments. It is a remedy for all ailments.

ADVERTISEMENTS.

DR. TALKS OF FOOD

Pres. of Board of Health.

"What shall I eat?" is the daily inquiry the physician is met with. It is not to be fretted to say that, in my judgment, a large percentage of disease is caused by poorly selected and unwholesome food. My personal experience with the fully-cooked food known as Grape-Nuts enables me to speak freely of its merits.

"From overwork, I suffered several years with indigestion, palpitation of the heart, and loss of sleep. Last summer I was led to experiment personally with the new food, which I used in conjunction with good, rich, ripe milk. In a short time after I commenced its use the disagreeable symptoms disappeared, my heart's action became steady and normal, the functions of the stomach were properly carried out, and I again slept as soundly and as well as in my youth.

"I look upon Grape-Nuts as a perfect food, and no one can minimize the fact that it has a most important place in a rational, scientific system of feeding. Any one who uses this food will soon be convinced of the soundness of the principle upon which it is manufactured, and may thereby know the facts as to its true worth." Read "The Food of the Future," in place "There is a Reason."

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

MENNETT'S DORATED TALCUM
TOILET POWDER
It is the only one that is both pure and healthy. It is the only one that is both pure and healthy. It is the only one that is both pure and healthy.

It is the only one that is both pure and healthy. It is the only one that is both pure and healthy. It is the only one that is both pure and healthy.

The Pride of San Francisco

While all the world wonders at the cheerful courage of the people of San Francisco in rebuilding their ruined city, the most grateful admiration is easily awarded to the able and dauntless men who have restored to the Western metropolis its chief ornament and most necessary luxury—the Hotel St. Francis.

Nothing given to the traveler from East or West quite so delightful a surprise as to find in the heart of what only the other day was a black desert of ruin this masterpiece of hotel building, equipment, and service. The house is gigantic in size, yet it has all the delicacy of appointments that one finds in the daintiest home. By a blending of the spirit of hospitality with a genius for organization, the management has developed a staff of employees who make every guest feel that he or she is the one individual for whose service the great machinery of the house is smoothly running. Moreover, the table has chosen fit to tempt the well-fed Lucullus back from the dim studies of the past. Yet, in spite of all these perfections, every suggestion that tends to add to the welfare of guests is not only welcomed but eagerly sought for.

A hotel, like any other living organism, must grow better or deteriorate day by day. To stand still is impossible. The St. Francis has grown steadily better from the day it was first opened to the public. To-day it is much larger in size than ever before, and improved in many attractive details.

When earthquake shattered most of the stately habitations of San Francisco, the Hotel St. Francis stood fast, unharmed—a tower of strength amid the desolation. Hundreds of guests from other hotels that had been dismantled in the crash were fed and sheltered in the St. Francis. The house was a haven of refuge, as well as a place of entertainment. At last the flames, sweeping up to it from three sides, when the city's water supply was cut off, consumed all the furniture and equipment, leaving the building, although badly scorched within, as sound as on the day it was opened. While the ruins of the city were still smoking, there sprang into existence, as if by magic, amid the grove of Union Square, across the way, the hangings gratefully remembered as the Little St. Francis, in which thousands of guests lived not only in comfort but in elegance during the lean and weary days that followed the catastrophe.

For months labor was scarce, materials were scarce, transportation seemed a lost art. Strikes were called to humor every passing whim of greed—yet somehow the management of the St. Francis steadily pushed on the work of reconstruction.

To-day the Hotel St. Francis, having persisted unharmed through the harsh tests of adversity, stands out triumphant in a community of great deeds. The interior arrangement is more beautiful, the furnishings and cuisine more sumptuous than before; yet there still prevails the tone of quiet elegance which always has been its standard. And in a city of world-wide fame for good living in a visit to the restaurant of the St. Francis is an event of supreme delight.

IMITATIONS of the genuine Angostura Bitters are constantly offered to the public by unscrupulous dealers. The genuine Angostura Bitters bears the signature of Dr. J. G. B. Serratt, who first prepared it at the city of Angostura, in the year 1824. Persons desiring to purchase genuine Angostura Bitters should see that the label bears the signature of the inventor and the name of the present manufacturers, Dr. J. G. B. Serratt & Sons, whose exclusive right to the use of the trade name Angostura for bitters has been sustained by the United States Circuit Court of Appeals, in a decision with which the Supreme Court of the United States, upon application made to it by the defendants, refused to interfere.

THE BARRIER

A SPIRIT IN PRISON

(Continued from page 26.)

stood on a terrace beside her in the darkness and had said: "I will go down to the sea, Signora, let me go down to the sea!"

"There's nothing, the matter, is there, tiensare?" she said, quickly. "Nothing wrong?"

"Signora, of course not! What should there be?"

"I don't know."

"I will letch the signorina."

On that night, years ago, she had battled with tiensare. He had

been loosed to yield to her. Now she yielded to him.

"Very well," she answered. "Go and tell the signorina I am

here."

She turned and went into the house and up to the sitting-room.

Verre did not come immediately. To her mother it seemed as if

she was a very long time coming; but at last her light step fell

on the stairs, and she entered quickly.

"Madre! How late you are? Where have you been?"

"Am I late? I dined at the little restaurant at the top of the

hill where the sun passes."

"There! But you haven't been there all this time?"

"No. Afterwards I took the tram to Poussillo and came home

by boat. And what have you been doing?"

"Oh, all sorts of things—what I always do. Just now I've been

with Ruffo."

"Tiensare told me he was here."

"Yes. We've been having a talk."

Hermione waited for Verre to say something more, but she was

silent. She stood near the window looking out, and the expression

on her face had become rather vague, as if her mind had gone on

a journey.

"Well," said the mother at last, "and what does Ruffo say

for himself, Verre?"

"Ruffo! Oh, I don't know."

She paused, then said:

"I think he has rather a hard time, do you know, madre?"

Hermione had taken off her hat. She laid it on a table and sat

down. She was feeling tired.

"But generally he looks so gay, so strong. Don't you remember

that first day you saw him?"

"Ah—then!"

"Of course, when he had fever."

"No, it isn't that. Any one might be ill. I think he has things

at home to make him unhappy sometimes."

"Has he been telling you so?"

"Oh, he doesn't complain," Verre said, quickly, and almost with

a touch of heat. "A boy like that couldn't whine, you know,

madre. But one can understand things without hearing them said.

There is some trouble. I don't know what it is exactly. But I

think his stepfather—his padrino, as he calls him—must have got

into some bother, or done something horrible. Ruffo seemed to

want to tell me, and yet not to want to tell me. And of course

I couldn't ask. I think he'll tell me to-morrow, perhaps."

"Is he coming here to-morrow?"

"Oh, in summer I think he comes nearly every night."

"But you haven't said anything about him just lately."

"No. Because he hasn't headed off to-night since the night of

the storm."

"I wonder why?" said Hermione.

She was interested; but she still felt tired, and the fatigue crept

into her voice.

"So do I," Verre said. "He had a reason, I'm sure. You're

tired, madre, so I'll go to bed. Good night."

She came to her mother and kissed her. Moved by a sudden

overwhelming impulse of tenderness, and need of tenderness, Hermi-

one put her arms round the child's slender body. But even as she

did so she remembered Verre's secret, shared with Emile and not

with her. She could not abruptly lose her arms without sur-

prising her child. But they seemed to her to stiffen, against her

will, and her embrace was merely mechanical. She wondered if

Verre noticed this, but she did not look into her eyes to see.

"Good night, Verre."

"Good night."

Verre was at the door when Hermione remembered her two meet-

ings of that evening.

"By the way," she said, "I met the Marchesino to-night. He

was at the Scoglio di Friso."

"Was he?"

"And afterwards on the sea I met Emile."

"Monsieur Emile? Then he isn't quite dead?"

There was a moment almost of irritation in Verre's voice.

"He has been working very hard."

"Oh, I see."

Her voice had softened.

"The Marchesino is coming here to lunch to-morrow."

"Oh, madre!"

"Does he bore you? I had to ask him to something after ac-

cepting his dinner, Verre."

"Yes, yes, of course. The Marchesino is all right."

She stood by the door with her bright, expressive eyes fixed on

her mother. Her dark hair had been a little roughened by the

breze from Ischia, and stuck up just above the forehead, giving

to her face an odd, almost a boyish look.

"What is it, Verre?"

"And when is Monsieur Emile coming? Didn't he say?"

"No. He suggested to-morrow, but when I told him the Marches-

ino was coming he said he wouldn't."

As Hermione said this she looked very steadily at her child.

Verre's eyes did not fall, but met hers simply, fearlessly, yet not

quite childishly.

"I don't wonder," she said. "To tell the truth, madre, I can't see how a man like the Marchesino could interest a man like Monsieur Emile; at any rate, for long. Well—!" She gave a little sigh, throwing up her pretty chin—"A letto si va!"

And she vanished.

When she had gone Hermione thought she, too, would go to bed.

She was very tired. She ought to go. Yet now she suddenly felt

reluctant to go, and as if the designs of the day for her were

not yet over. Besides, she was not going to sleep well. That

was certain. The day, the almost surely sensation of Ischia

was upon her. What was the matter with tiensare to-night? Per-

haps he had had a quarrel with some one at Mergellina. He had

a strong temper as well as a loyal heart.

Hermione went in a wander. The breeze from Ischia touched

her. She opened her lips, shut her eyes, drank it in. It would

be delicious to spend the whole night upon the sea, like Ruffo.

Had he gone yet? or was he in the boat asleep, perhaps, in the

Saint's Pool? How interested Verre was in all the designs of that

boy—how innocently, charmingly interested!

Hermione stood by the window for two or three minutes, then

went out of the room, down the stairs, in the front door of the

house. It was already locked. Yet tiensare had not come up to

say good night to her. And he always did that before he went

to bed. She unlocked the door, went out, shut it behind her, and

stood still.

How strangely beautiful and touching the faint noise of the

sea round the island was at night, and how full of meaning not

quite to be divided! It came upon her heart like the whisper of

a world trying to tell its secret to the darkness. What depths,

what sadness, what sad, what sad, what sad, what sad, what sad,

(too, of love, there were in nature! And yet in nature what terrible

indifference there was; a powerful, an almost terrific inattention,

like that of the sphinx, which gaze at what men cannot see

Hermione moved away from the house. She walked to the bow

of the island and sat down on the sand that Verre was fond of.

Presently she would go to the bridge and look over into the Pool

and look to the traces of fishermen. She sat there for some-

thing, gaining a certain peace, losing something of her feeling of

wary excitement and desolation under the stars. At last she

thought that sleep might come if she went to bed. But before

doing so she made her way to the bridge and leaned on the rail,

looking down into the Pool.

It was very dark, but she saw the shadowy shape of a fishing

boat lying close to the rock. She stood and watched it, and pre-

sently she met herself in a thicket of night thoughts, and forgot

where she was and why she had come there. She was recalled

by hearing a very loud voice singing, scarcely more than hum-

ming, beneath her.

"Oh, dolce luna bianca de l'estate

Mi fuggie ti venno accanto a la marina:

Mi destava le dolcissime serate

Gli occhi di Rosa e il mar di Mergellina."

It was the same song that Artois had heard that day as he

leaned on the balcony of the Risorante della Stella. But this

singer of it sang the Italian words, and not the dialect. The song

that wins the prize at the Piedigrotta Festival is on the lips of

every one in Naples. In houses, in streets, in the harbor, in every

place, and upon the sea it is heard incessantly.

And now Ruffo was singing it softly and rather proudly in

the Italian, to attract the attention of the dark figure he saw

above him. He was not certain who it was, but he thought it

was the mother of the signorina, and—he did not exactly know

why—he wished her to find out that he was there, squatting on

the dry rock with his back against the cliff wall. The ladies of the

Costa del Mare had been very kind to him, and to-night he

was not very happy, and vaguely he longed for sympathy.

Hermione listened to the pretty, tripping words, the happy,

yearning words. And Ruffo sang them again, still very softly.

"Oh, dolce luna bianca de l'estate—"

And the poor woman wandering in the dark! But she had

known the language of youth, the sweet white moon of summer

in the south. She had known them long ago for a little while, and

therefore, she knew them while she lived. A woman's heart is

tender, and wide as the world, when it contains that world

which is the memory of something perfect that gave it satisfaction.

"Mi destava le dolcissime serate

Gli occhi di Rosa e il mar di Mergellina."

Dear, happy, lovable youth that can sing to itself like that in

the deep night! Like that once Monseigneur he carried possession

of youth, sang. She felt a rush of tenderness for Ruffo, just

because he was so young, and sang—and brought back to her the

piercing truth of the everlasting renewal that goes hand in hand

with the everlasting passing away.

"Ruffo! Ruffo!"

Almost as Verre had once called "Pescatore!" she called. And

as Ruffo had once come running up to Verre he came now to Verre's

mother.

"Good evening, Ruffo."

"Good evening, signora."

She was looking at the boy as at a mystery which yet she could

understand. And he looked at her simply, with a sort of heart-

fulness and readiness to receive the kindness which he knew

dwelt in her for him to take.

"Are you better?"

(Continued on page 30.)

The Cake Pointer

By Earle Hooker Eaton

In the sideboard apprehension
Thrills the hidden gingerbread;
Doughnuts, shrinking from attention,
Sliver with a nameless dread,
In the pantry devastation
Now begins its ruthless rule;
Hungrier than all creation,
Little Willie's home from school!

As the pointer vents the rabbit,
As the needle seeks the ruf,
Willie moves by force of habit
Toward each gastronomic goal,
Sniffs the air and tiptoes slyly
To the sideboard with a smile:
"That there boy," says uncle, daily,
"He can smell a cake a mile!"

Once we had a maid named Tillie,
Who was sly as any mouse,
"Mr for sugar cake!" said Willie,
As one day he searched the house.
Later Tillie cried, "I did it!"
(Saved the cake was what she meant.)
"Natch the unious Tillie hid it,
Throwing Willie off the scent."

Metallic Mirrors for Searchlights

THE production of metallic mirrors for searchlights and other such uses is now in demand in Europe. Those made of glass, now used, are objectionable, owing to their liability to fracture when the guns are fired in ships, and to the silencing on the mirrors blinding and separating from the glass. A new metallic mirror, partially made by electro-deposition, is being introduced. The mirror has a surface composed of alternate bands of silver and white reflecting surfaces. It is claimed that this mirror gives a more penetrating beam of light both at night and in foggy weather, that objects on which such a beam of light is thrown stand out in greater relief than in a light thrown from a silver white metal mirror, and that the intensity of the light is so great that it is impossible to aim accurately at the projector. Another advantage claimed for the new mirrors is that they are not fractured by concussion, and that even when penetrated by bullets the area of distortion is very small.

A Problem too Great for Cupid

If Dan Cupid were a statistician he would, according to reliable figures, be in despair over the problem that confronts him at the present time. There are said to be, roughly speaking, some 15,000,000 more men than women in this world, and yet Cupid's aim be ever so sure, there would still be a great surplus of men left out who must, from natural causes, be bachelors.

The total population of the earth has been estimated at about fifteen hundred millions. More than half of them have been actually counted, so it is said, while the other half is loosely estimated. Europe is stated to be the only continent that has a numerical preponderance of women. It happens that the excess of men in Asia is rather more than the world's excess, from a percentage standpoint. No, if the blind god chooses, he may let the surplus Asiatics go unmarried, and in the rest of the world there would be substantially husbands enough to "go round."

Even in Europe there are countries—like Italy, Greece, and the countries which were formerly part of the Ottoman Empire—where the men outnumber the women; and in some parts of North America and of Africa the women are more numerous than the men. The most peculiar conditions, perhaps, are found in Hongkong and Hawaii. In Hongkong there are only five hundred women, and in Hawaii six hundred women, to every one thousand men.

It is well that Cupid is blind, for one place at such a state of affairs and he would be ready to tell his bow and arrows to any old lady who wanted his job.

John Adams

Signer of the Declaration of Independence
and second President of the United States.

HERE we have a Puritan of the Puritans—a man of stern and unbending rectitude—of generous and truly heroic temperament.

Descended from a pious God-fearing New England family of Pilgrims and Pioneers (who were for generations brewers, maltsters, barley and hop growers) he became the mouthpiece of the Revolution—the terror of tyrants—a giant in debate—and diplomatically more than a match for Pitt and Talleyrand.

I would rather die than be dictated to—this sentence accurately describes the stubborn spirit of this valiant old patriot whom all England could not govern.

John Adams, even as his fathers before him, nourished mind and body on health-giving barley beer, and died at 91 (twenty-one years beyond the scriptural span) enjoying all his mental powers to the very last.

*Familiar Letters—Riverside Press, N. Y. 1776; pages 22, 43, 46, 47, 76, 122, 126, 177.

Lets and works by his son, John Quincy Adams, Vol. 1, pages 2, 3, 9, 10, 11, etc. A letter to his wife, Abigail, May 21, 1775, says: "I would give \$250 for a gallon of your beer."

Budweiser

THE most popular beer in the world. There is less profit to the dealer who sells it, because it costs more money at the brewery than any other beer made. A royal brew of malt and hops whose absolute sovereignty has never been challenged. Unquestionably—

THE KING OF ALL
BOTTLED BEERS

Budweiser is Sold in all First-Class
Clubs, Hotels and Cafes

Bottled Only at the
KAUSEL-BUSCH BREWERY
St. Louis, Mo.

Carrying five of the
slides or 12 rolls.

1A Folding Pocket
Kodak Special

Just as good as a camera can be made—so small as to never be in the way.

There has never before been so much quality put into so small a camera—in lens and shutter and mechanical precision. It is right. Makes the popular 2 1/4 x 4 1/4 pictures, the camera itself measuring but 2 1/2 x 3 1/2 inches. Rapid Rectilinear lenses. Automatic Shutter. A perfect combination of convenience and efficiency.

Price, \$15.00.

EASTMAN KODAK CO.
Rochester, N. Y., The Kodak City.

ABBOTT'S BITTERS

Makes the best cathartic. Aids digestion. Relieves constipation. For all bile, acid and acid indigestion. A few bottles cure chronic constipation and improve the general health of the system.

Important to see that it is Abbott's.

(Continued from page 28.)

"Si, signora, much better. The fever has gone. I am strong, you know."

"You are so young."

She could not help saying it, and her eyes were tender just then.

"Si, signora, I am very young."

His simple voice almost made her laugh, stirred in her that sweet humor which has its dwelling at the core of the heart.

"Young and happy," she said.

And as she said it she remembered Vero's words that evening:

"I think he has rather a hard time."

"At least, I hope you are happy, Ruffo," she added.

"Si, signora."

He looked at her. She was not sure which he meant, whether his agent was to her hope or to the fact of his happiness. She wondered which it was.

"Young people ought to be happy," she said.

"Ought they, signora?"

"You like your life, don't you? You like the sea?"

"Si, signora. I could not live away from the sea. If I could not see the sea every day I don't know what I should do."

"I love it, too."

"The signorina loves the sea."

He had ignored her love for it and seized on Vero's. She thought that was very characteristic of his youth.

"Yes. She loves being here. You talked to her to-night, didn't you?"

"Si, signora."

"And to Giuseppe?"

"Si, signora. And this afternoon, too. Giuseppe was at Mergellina this afternoon."

"And you met there, did you?"

"Si, signora. I had been with my mamma, and when I left my mamma—perrettina—I met Giuseppe."

"I hope your mother is well."

"Signora, she is not very well just now. She is a little sad just now."

Hermione felt that the boy had some trouble which, perhaps, he would like to tell her. Perhaps some instinct made him know that she felt tender towards him, very tender that night.

"I am sorry for that," she said, "very sorry."

"Si, signora. There is trouble in our house."

"What is it, Ruffo?"

The boy hesitated to answer. He moved his bare foot on the bridge and looked down towards the boat. Hermione did not press him, and nothing.

"Signora," Ruffo said at last, coming to a decision, "my patrigno is not a good man. He makes my mamma jealous. He goes after others."

It was the old story of the south, then! Hermione knew something of the persistent infidelities of Neapolitan men. Poor women who had to suffer them!

"I am sorry for your mother," she said, gently. "That must be very hard."

"Si, signora, it is hard. My mamma was very unhappy to-day. She put her head on the table, and she cried. But that was because my patrigno is put in prison."

"In prison? What has he done?"

Ruffo looked at her, and she saw that the simple expression had gone out of his eyes.

"Signora, I thought perhaps you knew."

"I? But I have never seen your stepfather."

"No, signora. But—but you have that girl here, in your house."

"What girl?"

Suddenly, almost while she was speaking, Hermione understood.

"Peppino?" she said. "It was your patrigno who wounded Peppino?"

"Si, signora."

There was a silence between them. Then Hermione said, gently:

"I am very sorry for your poor mother, Ruffo, very sorry. Tell me, can she manage? About money, I mean?"

"It was not so much the money she was crying about, signora. But, of course, while patrigno is in prison he cannot earn money for her. I shall give her my money. But my mamma does not like all the neighbors knowing about that girl. It is a shame for her."

"Yes, of course it is. It is very hard."

She thought a moment. Then she said:

"It must be horrible—horrible!"

She spoke with all the vehemence of her nature. Again, as long ago, when she knelt before a woman in the night, she had put herself imaginatively in the place of a woman, this time in the place of Ruffo's mother. She had realized how she would have felt if her husband, her "man," had ever been faithless to her.

Ruffo looked at her almost in surprise.

"I wish I could see your poor mother, Ruffo," she said. "I would go to see her, only—well, you see, I have Peppino here, and—"

She broke off. Perhaps the boy would not understand what she considered the awkwardness of the situation. She did not quite know how these people regarded certain things.

"Wait here a moment, Ruffo," she said. "I am going to give you something for your mother. I won't be a moment."

"Giuseppe, signora."

Hermione went away to the house. The perfect naturalness and simplicity of the boy appeared to her. She was pleased, too, that he had not told all this to Vero. It showed a true feeling of delicacy. And she was sure he was a good son. She went up to

her room, got two ten-lira notes, and went quickly back to Ruffo, who was standing upon the bridge.

"There, Ruffo," she said, giving them to him. "These are for your mother."

The boy's brown face flushed, and into his eyes there came an expression of almost quivering gratitudes.

"Oh, signora!" he said.

And there was a note of protest in his voice.

"Take them to her, Ruffo. And—and I want you to promise me something. Will you?"

"Signora, I will do anything—anything for you."

Hermione put her hand on his shoulder.

"Be very, very kind to your poor mother, Ruffo."

"Signora, I always am good for my poor mamma."

"I am sure with warm regards."

"I am sure you are. But just now, when she is sad, be very good to her."

"Si, signora."

She took her hand from the boy's shoulder. He bent to kiss her hand, and again, as he was lifting up his head, she saw that smiling light in his eyes. This time it was unmingled with anxiety, and it startled her.

"Oh, Ruffo—!" she said, and stopped, staring at him in the darkness.

"Signora? What is it? What have you?"

"Nothing. Good night, Ruffo."

"Good night, signora."

He took off his cap and ran down to the boat. Hermione waited over the railing, bending down to see the boy reappear below. When he came he looked like a shadow. From this shadow there rose a voice singing very softly:

"Oh, dolce luna bianca de l'estate—"

The shadow went up in the boat, and the voice died away.

"Gli occhi di Rosa e il mar di Mergellina."

Hermione still was bending down. And she formed the last words with lips that trembled a little:

"Gli occhi di Rosa e il mar di Mergellina."

Then she said: "Maurice—Maurice!"

And then she stood trembling.

Yes, it was Maurice whom she had seen again for an instant in the smiling look of Ruffo's face. She felt frightened in the dark. Maurice—when he kissed her for the last time, had looked at her like that. It could not be fancy. It was not.

Was this the very first time she had noticed in Ruffo a likeness to her dead husband? She asked herself if it was. Yes, she had never—or had there been something? Not in the face, perhaps. But—the voice? Ruffo's singing? His attitude as he stood up in the boat? Had there not been something? She remembered her conversation with Artio in the cave. She had said to him that—she did not know why—the boy, Ruffo, had made her feel, he stirred up within her slumbering desires, slumbering yearnings.

"I have heard a hundred boys sing on the bay—and just this one lurches some chord, and all the strings of my soul quiver."

She had said that.

Then there was something in the boy, something not merely strange like that look of grief—something permanent, subtle, that resembled Maurice.

Now she no longer felt frightened, but she had a passionate wish to go down to the boat, to see Ruffo again, to be with him again, now that she was awake to this strange, and perhaps only faint, intuition of another of the one whom she had lost. No—not intuition: this fragmentary reproduction of some character, like, some—

She lifted herself up from the railing. And now she knew that her eyes were wet. She wiped them with her handkerchief, drew a deep breath, and went back to the house. She felt for the handle of the door, and when she found it, opened the door, went in, and shut it rather heavily, then looked at it. As she bent down to push open the bolt at the bottom a voice called out:

"Who's there?"

She was startled, and turned quickly.

"Giuseppe?"

He stood before her half dressed, with his hair over his eyes, and a revolver in his hand.

"Signora? It is you?"

"Si. What did you think? That it was a robber?"

Giuseppe looked at her almost sternly, went to the door, bent down and bolted it, then he said:

"Signora, I heard a noise in the house a few minutes ago. I listened, but I heard nothing more. Still, I thought it best to get up. I had just put on my clothes when again I heard a noise at the door. I myself had looked it for the night. What should I think?"

"I was outside. I came back for something. That was what you heard. Then I went out again."

"Si."

He stood there staring at her in a way that seemed, she fancied, to rebuke her. She knew that he wished to know why she had gone out so late, returned to the house, then gone out once more.

"Come upstairs for a minute, Giuseppe," she said. "I want to speak to you."

He looked less stern but still unlike himself.

"Si, signora. Shall I put on my jacket?"

"No, no never mind. Come like that."

She went upstairs, trembling softly, but she might disturb Vero. He followed. When they were in her sitting-room she said:

(Continued on page 32.)

"VA-AN, IT'S GOT LOTS OF STYLE, BUT IT MAKES ME LAUGH (NO BELIEVED TAIL)"

Press Boycotts of Parliamentary Speakers

THE recent curious boycott of the press in the Berlin Parliament has a precedent in the Mother of Parliaments, the British House of Commons. The latter in that case was no less a person than the late Daniel O'Connell. He condemned the inaccuracy of the Parliamentary reports, but he forgot to make allowance for accurate difficulties and the laws of intervening conversation. He charged the reporters with the audacious suppression of his speeches, and the gallery then refused to report him at all. "Dan" stormed and thundered in vain, even avowing that the ringleaders he brought to the bar of the House. Finally, he apologized, and all was well. Lord Lytton in 1871 fell foul of the press in the same way, and the late Lord Maitland had his name omitted from London newspaper reports for two years because he said something the reporters did not like.

Big as a Mountain

MRS. BENHAM. "You need to say that you would move mountains for me."

BENHAM. "Well, didn't I bring home your new hat the other night?"

Not to Disappoint Him

A NEW ENGLAND LAWYER tells of a judge in a criminal court down East as well known in the vicinity for his good heart as for his legal attainments. His Honor's softness of heart, however, did not prevent him from doing his duty as a judge.

On one occasion a man who had been convicted of stealing a quantity of wearing apparel was brought into court for sentence. He seemed very sad and hopeless, and it was observed that the court was not entirely unmoved.

"Have you ever been sentenced to imprisonment?" asked the judge.

"Never!" exclaimed the prisoner, bursting into tears.

"Don't cry, my man," said his Honor, consolingly, "you're going to be out!"

The Warm Reception

"I mean she found the audience rather cold last night."

"They were at first; but when they remembered they had paid good money to see the show they got very hot."

(Continued from page 30.)

"Gaspere, why did you go to bed without coming to say good night to me?"

He looked rather confused.

"Did I forget, signora? I was tired. Forgive me."

"I don't know whether you forgot. But you never came."

As Hermione spoke, suddenly she felt as if Gaspare, too, were going, perhaps, to drift from her. She looked at him with an almost sharp intensity which hardened her whole face. Was he, too, being insincere with her, her whom she trusted so implicitly?

"Did you forget, Gaspare?" she asked.

"Signora," he replied, with a certain, almost ugly, doggedness, "I was tired. Forgive me."

She felt sure that he had chosen deliberately not to come to her for the evening salutation. It was a trifle, yet to-night it hurt her. For a moment she was silent, and he was silent, looking down at the floor. Then she opened her lips to dismiss him. She intended to say a curt "Good night," but—no—she could not let Gaspare retreat from her behind impenetrable walls of obstinate reserve. And she did know his nature through and through. If he was odd to-night, unlike himself, there was some reason for it—and it could not be a reason that, known to her, would make her think badly of him. She was certain of that.

"Never mind, Gaspare," she said, gently. "But I like you to come and say good night to me. I am accustomed to that, and I miss it if you don't come."

"Si, signora," he said, in a very low voice.

He turned a little away from her, and made a small noise with his nose as if he had a cold.

"Gaspare," she said, with an impulse to be frank, "I saw Ruffo to-night."

He turned round again quickly. She saw moisture in his eyes, but they were shining almost fiercely.

"He told me something about his patrigno. Did you know it?"

"His patrigno and Peppina?"

Hermione nodded.

"Si, signora; Ruffo told me."

"I gave the boy something for his mother."

"His mother—why?"

There was quick suspicion in Gaspare's voice.

"Poor woman! Because of all this trouble. Her husband is in prison."

"Lo so. But he will soon be out again. He is 'protected.'"

"Who protects him?"

But Gaspare evaded the answer and substituted something that was almost a rebuke.

"Signora," he said, bluntly, "if I were you I would not have anything to do with these people. Ruffo's patrigno is a bad man. Better leave them alone."

"But Ruffo?"

"Signora?"

"You like him, don't you?"

"Si, signora. There is no harm in him."

"And the poor mother?"

"I am not friends with his mother, signora. I do not want to be."

Hermione was surprised by his harshness.

"But why not?"

"There are people at Mergellina who are bad people," he said. "We are not Neapolitan. We had better keep to ourselves. You have too much heart, signora, a great deal too much heart, and you do not always know what people are."

"Do you think I ought not to have given Ruffo that money for his mother?" Hermione asked.

"Si, signora. It is not for you to give his mother money. It is not for you."

"Well, Gaspare, it's done now."

"Si, it's done now."

"You don't think Ruffo bad, do you?"

After a pause Gaspare answered:

"No, signora. Ruffo is not bad."

Hermione hesitated. She wanted to ask Gaspare something, but she was not sure that the opportunity was a good one. He was odd to-night. His temper had surely leavened up. Perhaps it would be better to wait. She decided not to speak of what was in her mind.

"Well, Gaspare, good night," she said.

"Good night, signora."

She smiled at him.

"You see, after all, you have had to say good night to me!"

"Signora," he answered, earnestly, "even if I do not come to say good night to you always, I shall stay with you till death."

Again he made the little noise with his nose, as he turned away and went out of the room.

That night, ere she got into bed, Hermione called down on that faithful watch-dog's dark head a blessing, the best that Heaven crained for him. Then she put out the light and lay awake so long that when a boat came round the cliff below the Saint's Pool to the open sea, in the hour before the dawn, she heard the soft splash of the oars in the water, and the sound of a boy's voice singing:

"Oh, dolce luna bianca de l'estate

Mi fezzu il suntu accento a la marina;

Mi destu la dolcissime estate

Gli occhi di Rosa a li mar di Mergellina."

She lifted herself up on her pillow and listened—listened until across the sea, going towards the dawn, the song was lost.

"Gli occhi di Rosa e li mar di Mergellina."

When the voice was near, had not Maurice woken near to her? And when it died away did not he fade with it—fade until the fathom waters took him back into the sea after the song was hushed.

She sat up in the darkness until long after the song was hushed. But she heard it still in the whisper of the sea.

The Sand-dab—a Soulful Sole

Thousands agree numbers to man the sand-dab family lived and thrived wonderfully upon the shore of the sunlit sea around Catalina Island, off the coast of California. Although born in a lowly sphere, the sand-dab were noted for their delicacy, a certain fresh leguminosity of flavor that made them much esteemed and sought after by their finny neighbors. When in due course of time gold was found in California and men flocked thither from all the world, fishermen began to ply their trade in the waters near San Francisco and soon discovered sand-dabs among the catch. "Deat the sand-dab!" or words to that effect, they cried many a time and oft. For these were small fish, like baby sole, floundery flatfish, or hake; white below and gray on the top-side, and of most humble and unobtrusive demeanor.

Chinamen flocked to San Francisco in their thousands, and the fishermen breathed a sigh of relief. They sold the humble sand-dab to the unobtrusive Chinamen for a song—not a Chinese song, of course—and thanked their stars that they had found even a little cheap market for the bothersome little fellows that persisted in being caught in good company. This went on for forty years.

One day after the great fire an affable philosopher landed in a Chinese restaurant and ate a fish that seemed to have come from heaven.

"Wong," he said, "you ratchee him fish from Hong-kong?"
"No," replied Wong. "Him Mexican fisher! Come from Catalina. His name cawee sand-dab."

That was enough. The philosopher told the wise men at the Bohemian Club, and they consulted with all the leading hotel and restaurant men in town. To-day you can buy the sand-dab at any really excellent table in San Francisco. He is at his best especially served to a delicate golden brown, and served with drawn butter and a pinch of *fine herbes à la maître d'hôtel*. M. Leb will tell you exactly how he should be done. The sand-dab's cute little bones all rattle off like a row of fairy piano keys (you know the fairies have very tiny pianos) and then you discover the sand-dab meat, white as alabaster, daintily as brook trout of early April, delicate as a sunset to my lady's eyebrow, satisfactory as a check from a long-lost uncle. Indeed, Mr. Wilson, the king of all California epicures, says that the sand-dab is a soulful sole.

An Unhappy Outlook

PERSPECTIVE TENANT. "I should want the studio for sculpture."

CARTER. "Yes, sir; some of these is rentful for that. There's a sculptor moulder-ung next door, sir."

The Other Great Man

Dr. HENRIE, U.S.M., of California, happened to suppress an epidemic of measles while on a vacation trip to Tahiti, and Chief Orreori gratefully invited him to a banquet in his primitive palace. The South Sea potentate and his white guest sat amiably on the floor, and dined off roast pig and other native delicacies served on broad leaves and eaten with the fingers. After dinner, host and guest adjourned in seats outside the palace, lit bug, lit, black cigars, and gazed out over the sunset Pacific.

In the eyes of Chief Orreori, Robert Louis Stevenson, who did so much to improve the condition of the South-Sea Islanders, was the greatest white man that ever lived. The chief related to Dr. U.S.M. many incidents to illustrate Stevenson's kindness, then asked a score of questions about the health of Stevenson's widow and of his step-children. When the last question had been answered there followed a long period of silence. The two friends peered slowly at their cigars and hurriedly regained the radiant triple moonlight glowing upon rolling palm fronds and the silvery ocean. Then Orreori turned to the doctor and demanded, "Now tell me about John L. Sullivan?"

KING SPRUCE

KING SPRUCE

A NEW NOVEL *by* HOLMAN DAY

REALITY is the keynote of this new novel—a big, sweeping, healthy story, breathing the vigor of its scene—the woods of Maine. This realm of King Spruce vibrates with the rushing life—and life means strife—of the struggle with logs and lumber barons. A plucky young man, in love with the daughter of the chief of these barons, fights his fight amid the perils of drifting snow and icy sluiceways, rushing logs and reckless men.

KING SPRUCE

THE critics like the story and the way it is told. The verdict seems to be unanimous. The *New York Sun* says: "An excellent and original story of the Maine woods has been written by Mr. Holman Day. . . . As soon as Mr. Day gets into the woods, one exciting adventure follows another, and any number of entertaining people are brought to notice. . . . It is an enjoyable tale from beginning to end."

COMMENT

A Duty Left Undone

CONGRESS, at this writing, is about to adjourn, and has not passed an emergency-currency bill. The amended ALDEN bill passed the Senate; the VICKLAND bill passed the House. They met in conference, but nothing came of it. Hope is not yet quite dead that Congress will discharge its duty to the country in this matter. Its course, so far, illustrates the irresponsibility of a group. No member will be held to account by his constituents for not passing the desired bill. The failure, if there is one, will rest upon the party in control of Congress. The President has done what he could; individual members have made great efforts to provide this safeguard, but it has not been provided. The best excuse that can be framed at Chicago for this neglect will be much less effectual than to pass the best possible bill before going to Chicago.

Bryan's Wavering Boom

Pennsylvania greatly but with penetrating decision declined to instruct her delegates at large to vote for BRYAN at Denver. The anti-Bryan action of the convention unquestionably expressed the feelings of a majority of the party throughout the State, and will have great influence on the whole body of delegates. There are sixty-eight of them, and though the Bryan League has been active in the primaries in many districts, it is questioned whether BRYAN will hold more than a dozen delegates in the whole group. The intolerant energy of Brother BRYAN's competitive methods, the ardor of his efforts for himself, and his harsh attitude towards all rivals are cultivating the opposition to him. His defeat in the Florida primaries indicates that men who don't want him are very much less afraid to say so than they were even a month ago, and encourages the belief that if there is a chance to get at Denver the deliberate choice of the delegates, he may be beaten. He is credited at this writing with 110 delegates, and the anti-Bryan men think he will get about 616, which will be 52 short of the two-thirds needed to nominate him.

The "Commoner's" Poetry

Two poems illuminate the latest number of the *Commoner*, one on the editorial page, and the other, as usual, in the Home Department. Again the Doctor shrewdly attributes the authorship to others, but who can hardly fail to be impressed by this touching personal note:

"I may not reach the heights I seek,
My untried strength has laid me
Out, halfway on the mountain peak.
Phoebe trembles may assist me,
But though that place I never gain,
Herein lies comfort for my pain—
I will be worthy of it."

Obviously "untried" should be "twice-tried" or "soft-tried"—maybe a slip of the pen—otherwise it is perfect even to the smug recognition of self-worth in the last line. The second stanza has a commercial rather than a political tinge; thus:

"I may not triumph in success,
Despite my earnest labor,
I may not grasp results that bloom
The efforts of my neighbor.
But though that goal I never see,
This thought shall always dwell with me—
I will be worthy of it."

Possibly the mail did not contain the usual number of subscriptions on the morning when the poetic pen was taken in hand. In any case the editorial verses possess a more mystical appeal. These are the first and the last:

"The mist crept in from the sea
Out of the void and the vast;
And it bore the silver rain
A shimmering good in its train,
And many a mourning strain
Of the ships that sailed in the past,
Soft as sleep's faithful be
The mist crept in from the sea."

"The mist crept in from the sea,
And bode for a space, and then
It heard the imperious call
Of the deep transcending all,
And it knew itself as the thrall
Of the world-old master of men,
So, still as the dreams that flee
The mist crept back to the sea."

It has been a good mist, that, which has borne in the silver rain; but, alas! we feel, with WATSON, that it is pretty sure to creep back again to the sea, along with the dreams that flee. Meanwhile we must await further revelations with ill-concealed anxiety.

An Opposition Needed

Very truly says the *World* in commenting upon Brother BRYAN's indulgent estimation of Brother ROOSEVELT:

If the Democratic party has any present excuse for existing, that excuse lies in a vigorous and uncompromising opposition to the party in power—the opposition which is absolutely necessary to the efficiency and stability of a republican form of government.

The usefulness of the Democratic party lies in its efficiency as a party of opposition. It must either put forth more attractive policies than the Republicans or more attractive men. It cannot get anywhere with "Me too" for its platform. At present the duty of providing an opposition to the present government is discharged most conspicuously and brilliantly, if not effectively, by a Republican newspaper, our neighbor the *Sun*. Strange to say, we have heard of its being remarked by a member of the administration that it is only from the *Sun* that the administration gets any helpful criticism. How helpful energetic criticism may be is, probably, better appreciated by persons who are carrying the responsibilities of government than by mere lookers-on.

The Defeat of the Mail Subsidy Bill

Again Congress has refused to authorize the use of some of the government's annual six million dollars of revenue from the ocean mail service as an inducement to the construction of steamships for the South-American and East-Asian trade. This year's defeated measure started out as the protégé of Senator GALLAGHER, and finished in the House, as Mr. HANCOCK would say, "a shivering minor" in an extreme state of ante-mortem emaciation. Indeed, so greatly was it reduced during its vicissitudinal career—all the way from \$4,608,282 to \$1,000,000—that it was a mercy to have it killed. Nevertheless, the vote was very close: 145 to 154. Two Democrats voted for it and thirty-one Republicans—every one of them a fresh-water man—voted against it. Now the pros and cons of increasing the mail subsidies offered to American mail steamships have been talked to death. The anti-subsidists say that foreign shipowners give us as good freight and mail service as we need, that if we are threatened with war we shall be able to buy abroad the colliers and transports that would be needed in the event, and that the agitation for increased subsidization is being engineered by "grafters" and "monsters," among whom, we suppose, are included the President, the Secretary of State, and the Postmaster-General. As for the pro-subsidists, they believe that "every ship is

a missionary of trade; that steamship lines work for their own countries just as railroad lines work for their terminal points, and that it is as absurd for the United States to depend upon foreign ships to distribute its products as it would be for a department store to depend upon wagons of a competing house to deliver its goods." Further, that when war comes it will be impossible to procure enough ships from abroad. And, finally, that quite apart from the dollars and cents of the question it is a disgrace that such a great country as this should be without hands of its own wherewith to give and take. "In the year ending June 30, 1903," said the Secretary of State before the last Trans-Mississippi Commercial Congress, "there entered the port of Rio de Janeiro steamers and sailing-vessels flying the flag of Austria-Hungary, 129; of Norway, 142; of Italy, 105; of Argentina, 204; of France, 349; of Germany, 657; of Great Britain, 1785; of the United States, no steamers, and seven sailing-vessels, two of which were in distress!" It is difficult to blame a man who has lived by the sea for exclaiming at such statistics.

A Lawyer's Veto

Among other bills passed at the late session of the New York Legislature which failed for lack of the Governor's signature was one providing, in effect, that the railway fare to Coney Island should be five cents. Of this bill the Governor said:

It is clear that if the rate is not a reasonable one and if the requirement would operate as a confiscation of the company's property the Legislature cannot impose it. The attempt to enforce such a rate under such circumstances would be abortive, as a successful appeal could be made to the courts. It is idle to suppose that the companies can be compelled to reduce their fare to five cents merely because the Legislature says so.

Whether a five-cent fare is a fair one depends upon facts and not upon sentiment, desire, or prejudice; whether the result be agreeable or disagreeable, it inevitably will be reached only after the facts have been ascertained and considered. Justice requires this, and under the Constitution the requirement will be enforced.

The proper way to deal with these matters is to provide for investigation in which the whole subject can be considered, previous claims sifted out, and a result just both to the corporations and to the public arrived at.

The Governor is a lawyer, and talks like one. We commend his style of discourse to all Executives who have to pass on similar questions. The other style of discourse, more familiar in cases of this sort, is well exemplified by remarks, quoted in the *World*, of SAMUEL PUCK, at a meeting of the Central Federated Union. Supporting a resolution denouncing the Governor, he said:

The Governor was afraid that the passage of the Five-Cent Fare bill would have confiscated the property of the railway corporation. He does not wish to oppress the corporations. The Governor has refused to accede to the demands of the people, who for two years have fought for the passage of this bill.

Mr. PUCK, it will be seen, is not checked in his approval of the bill by computations about injustice to railways or decisions of the Supreme Court. His constituents want a five-cent fare to Coney Island, and want it now. So the *World* seems to feel, and prints a map of New York State showing how great a majority of the counties voted to pass the bill. No voted Cattaraugus and Niagara and Chautauque; so Allegany and Steuben; so Herkimer, Essex, and Clinton; all counties from 200 to 400 miles distant from Coney Island, and about as conversant with railroad rights in that Elysium as with the looks on the Martian count.

The Principal Argument not Good Enough

So there is an engaging simplicity about the remarks of Senator WADSWORTH, who introduced the bill, and who said, as the *World* quotes him:

I confess I do not clearly understand the Governor's reasons for vetoing the bill, which was adopted by the leaders of his own party after I had introduced it. It seems to me that the principal argument in its favor was the endorsement of it by the people of the State and by both political parties. The bill was carefully drawn and perfected several times. It was made necessary by the failure of the Public Service Commission to act.

The argument that Mr. WADSWORTH speaks of was undoubtedly the principal argument in favor of the bill, and was undoubtedly considered by the Governor. But it did not move the man who knows law, and who knows courts and what courts are for. He said:

It is highly important that we should have transportation in our cities at the lowest fair rates. It is desirable that in New York city there should be low rates from the congested quarters

to the breathing-spots in the outlying districts and by the sea. The sure way and the only way to make real progress in this direction is through the ascertainment of the essential facts and the making of reasonable rates in accordance with the facts. This bill is wrong in principle and is not adapted to secure the desired result. I cannot approve it.

It is important that people in general, politicians, and State Legislatures should learn as promptly as may be that the proper basis of meddling with railroad rates and fares is not an agreement of leaders, nor popular endorsement, but a showing of ascertained facts to the effect that the rates or fares charged are not just or reasonable. In conveying this important and timely lesson nobody now in office seems quite so efficient as Governor HUGHES.

Not Out Yet

So the court finds HARRY THAW to be insane! As between the responsibility for keeping him shut up and the responsibility for letting him loose, the former is easier undertaken.

Exceptionally Foolish

A Federal judge who has served ten years and has reached the age of seventy can resign if he chooses, and continue to draw the full pay of his office during the remainder of his life. Mr. CARLEMAN, of Missouri, a Republican member of the House Committee on the Judiciary, has introduced a bill providing that this privilege of drawing pay after resignation shall only belong to United States judges who resign within ninety days after they reach the age and accomplish the terms of service which entitles them to full pay without work. The bill in effect would compel most Federal justices to resign at seventy or lose their pension privilege. A foolish and impertinent bill it is, and not likely, we suppose, to escape from the Judiciary Committee which now has it in keeping. If it became a law, the chief effect it would have would be to keep on the bench some disabled judges who wanted to retire but had lost their pension privilege.

After Castro

President Cuzco has two new enemies, the bacubic plague and a malarial fever which looks like yellow fever. Their claims will not be passed upon by his courts, neither will the Mexican doctrine save him from invasion by them. They are both results of incompetent government. The laws of nature are binding even on the lawless, and in the long run they are certain to be enforced.

Hydrophobia Does Happen

It was a distressing coincidence for the S. P. C. A. that close on the heels of the society's circular in deprecation of the belief in hydrophobia as an appreciable danger, and of the proposal to muzzle all the dogs, should have come the lamentable death of WILLIAM H. MARSH, of Brooklyn, from as clear a case of hydrophobia as could well be recorded. Hydrophobia is, happily, a pretty rare disease, but not so rare but that it is fatuous to deny its existence or to assert that most patriots who are supposed to have died of it died merely of the fear of it. The hardihood with which this absurdity is maintained is remarkable. Neither in Mr. MARSH's case nor in that of the child of Dr. H. P. Loomis, several years ago, was there fatal fear. Both of these local cases were undoubtedly rabies. Criticism of Mr. MARSH's doctors by the Medico-Legal Society for keeping the patient under morphine in the final throes of the disease was impertinent but unimportant.

Progress

Ascension accidents now vary the newspaper records of smashes and fatalities. In the papers of May 24 there were two: an aeroplane wrecked at Hammondsport, New York, and a big balloon collapse at Oakland, California, with sixteen injuries. This means progress in aeronautics. The motor-cars didn't hurt any one until they began to go. Neither did the aeroplanes.

Mr. Taft's Business with Panama

Mr. TAFT has himself explained for publication the nature of the business which took him this last time to the Isthmus. According to the Secretary's statement, it was represented to him that "there was likely to be great fraud in the elections to be held for the Presidency of Panama on the 12th of July," and that already many persons had been illegally refused

registration. Whereupon he abandoned politics—and the War Department—and went to Panama that he might with his celebrated kindness point out to the government of that country the imminence of "violence, riot, and insurrection." What was said during his conference with the Panamanian authorities has not, of course, been revealed. We have merely been told that Panamanian government has given the United States through its agents a right of concurrent supervision over final judgment upon all electoral proceedings, past and present. In other words, Panama appears to have accepted the ineluctable onus of prevention. As for the pound of cure, it is suggested at the end of Article VII. of the United States-Panama convention of 1903:

The . . . right and authority are granted to the United States for the maintenance of public order in the cities of Panama and Colon and the territories and harbors adjacent thereto in case the Republic of Panama should not be, in the judgment of the United States, able to maintain such order.

A Victory for the Suffragettes

The Englishwomen who have so ardently pursued the right to vote have accomplished this much, that Premier Asquith and his government have resolved to make woman suffrage a leading issue at the next general election. In the reform bill to be introduced by the government there will be a sweeping woman-suffrage provision—to the glory of the suffragettes. For though this long time in England there have been many believers in the principle of woman suffrage, the organization by the suffragettes of a decided movement is of recent origin, and it is only lately that we began to hear of women storming St. Stephen's, besieging Downing Street, claiming their right to vote at public meetings, and generally "Trafalgar-Squaring." Now they see their chance—a chance won by their efforts—but there is plenty for them to do between now and the next general election, which probably will not occur until 1910. An odd thing about the government's action is that Premier Asquith is not personally a convert to this cause. With him it is a matter of party policy. Former Prime Minister ARTHUR BALFOUR, however, the leader of the opposition, is a believer in woman's suffrage. But as the Unionists may seek to oppose it, Mr. BALFOUR, as their leader, may find himself for party reasons fighting a cause he believes in headed by a man who does not believe in it.

Prohibition in China

A year and a half ago the Chinese government approved regulations intended to compass the gradual extirpation of the opium habit in China. TUNG SHAN-YI, Governor of Fengtien, set them up. Announcing the government's purpose to suppress the cultivation and consumption of opium throughout the empire within ten years, they provided that land under poppy cultivation should be reduced by one-tenth annually; that all opium-smokers should register themselves, stating the amount they consumed, and that no opium should be sold to persons unregistered; that persons under sixty must decrease their allowance by one-fifth annually; that all public opium dens should be closed within six months, and no smoking apparatus sold after a year; that officials must set an example to the people, and if themselves opium-smokers, must stop the habit within six months or retire from office. These were thoroughgoing regulations, and were welcomed by the press, native and foreign, throughout China. A correspondent of the *London Times* tells what he can about the effect of them. He quotes some one as saying that the Chinese love regulations but shun regulation. The enforcement of the opium regulations he finds to be exceedingly variable, according to the feeling of the local authorities, so that it amounts in something like a local-option system. The most important thing, he considers, is to cut down production and importation. If the drug is produced or brought in, it will be consumed. He cannot learn that as yet there has been anything like a systematic restriction of production. As for importation, England has agreed to a reduction of one-tenth annually, but it is not yet enforced. That public opium-smoking has become illegal, that new appointees to office are now non-smokers, and that public opinion in China is strong for the reform, the *Times* correspondent considers highly important. The work has started. With its development and continuance important questions of revenue are mixed up, and it will doubtless move slowly, but apparently it is moving.

The Vice-Presidential Office

Now that Secretary TAFT is looked upon by most Republicans as certain to become the standard-bearer of their party in the next Presidential election, and now that many Democrats, although on such less solid grounds, take an equally rosate view of WILLIAM J. BRYAN'S chance of receiving his party's nomination, the choice of a nominee for the Vice-Presidency is receiving much more careful attention at the hands of politicians than has been the case for many years. Under the circumstances, it is worth while to recall the extraordinary changes which have taken place in the popular conception of that office during the last twelve decades. The intention of the framers of the Federal Constitution was that the occupant of the post should be the American editor who, in the judgment of the Presidential electors, should be qualified for the duties of Chief Magistrate to a degree second only to that accomplished in the President himself. The third section of the second article of our Federal organic law, as originally drawn, and as operative up to the general election of 1804, provided that the Presidential electors should meet in their respective States and vote by ballot for two persons, without specifying which they desired for the Presidency and which for the Vice-Presidency. Certificates of the results of these balloting were to be sent to the President of the Senate, who, in the presence of the Senate and House of Representatives, was to open them after which the votes were to be counted. The person having the greatest number of votes was to be President, if such number were a majority of the whole number of the Presidential electors appointed, and if there were more than one who had such a majority and also an equal number of votes, then the House of Representatives (voting by States, each of which should have one vote) should immediately choose by ballot one of them for President; if no person had a majority, then from the five highest on the list the said House should in like manner choose the President. A majority of all the States represented in the House was to be necessary to a choice. In every case, after the choice of a President, the person having the greatest number of votes of Presidential electors should be the Vice-President; but if there should remain two or more persons having an equal number of such electoral votes, the Senate should choose from them by ballot the Vice-President. Obviously the effect of such provisions would be, ordinarily, that the Vice-President, like the President, would be a first-class statesman, and, until the system of party government came into vogue, the fact that they might differ materially as to important public questions was not looked upon as an insuperable objection.

Let us see how the original provisions worked. In 1789 there were 69 Presidential electors. Of the names certified by them to the President of the Senate that of GEORGE WASHINGTON received every vote. As JOHN ADAMS, of Massachusetts, received 34 electoral votes, which, although not a majority, was a much larger number than was given to any other person, he became Vice-President. In WASHINGTON'S first administration two opposed parties, the Federalist and the anti-Federalist or Republican, were organized. Nevertheless, in 1792, WASHINGTON received 132 electoral votes—all that were cast (there were three vacancies); and JOHN ADAMS, Federalist, received 27, which was a majority—GEORGE CLINTON, Republican, obtaining 50, and five other Republican votes being cast for other candidates. Of course JOHN ADAMS became Vice-President. By 1796 the division between Federalists and Republicans had become acute. JOHN ADAMS, the representative of the former party, got 71 electoral votes, and THOMAS JEFFERSON, the principal spokesman of the latter party, 68. The two, accordingly, became President and Vice-President. It follows that if JOHN ADAMS had died during his term, the powers of the Federal Executive would have fallen into the hands of a party sharply differentiated from his own. It was not this consideration, however, but another, that led to a drastic change in the constitutional provisions. It so happened in 1800 that although JOHN ADAMS, the Federalist candidate, received only 65 electoral votes, THOMAS JEFFERSON and AARON BURR, both of whom were Republicans, received each 73. Under the circumstances, the choice between JEFFERSON and BURR devolved upon the House of Representatives. The fact that the Federalists, had they chosen—and they came near choosing—could have made BURR President, led to the adoption of the Twelfth Amendment of the Constitution, whereby the Presidential electors were to name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President. The ultimate effect of this amendment was inevitably to modify the popular conception of the Vice-Presidential office. Nevertheless, for a good many years its original prestige survived. For example, in 1804 GEORGE CLINTON, the successful candidate for the Vice-Presidency, was a spokesman of the Republican party supposed in importance by JEFFERSON and MONROE above, and he had three times received electoral votes for the Presidency. On these grounds he was again chosen Vice-President in 1808, the successful nominee for President being MADISON. On the election of MADISON to a second term ELBRIDGE

GERRY, who had been one of the framers of the Constitution and who had wrested Massachusetts from the Federalists, became Vice-President. In 1816, when JAMES MONROE was elected Chief Magistrate, Governor DANIEL D. TOMPKINS, of New York, was made Vice-President by an equal number of votes. Had the original clause of the Constitution then existed the House of Representatives would have had to choose between them. The same ticket was re-elected four years later. In 1824 JOHN C. CALHOUN, a statesman of national distinction, was chosen Vice-President by a great majority, whereas no candidate for the Presidency was successful in the counting of electoral votes, and JOHN QUINCY ADAMS was designated by the House of Representatives. JOHN C. CALHOUN was re-elected Vice-President in 1828, and in 1832 MARTIN VAN BUREN, who had been JACKSON'S Secretary of State, was elected Vice-President for JACKSON'S second term. VAN BUREN was the last statesman recognized as an Presidential calibre to be elected Vice-President up to 1876. During the intervening forty years the Vice-Presidential office fell into comparative disrepute. Neither JOHN TYLER, nor MILLARD FILLMORE, nor WILLIAM R. KING, nor A. C. HOWKINS, nor HANNIBAL HAM- LINS, nor ANDREW JOHNSON, nor SCHUYLER COLFAX, nor HENRY WILSON would have been nominated for Vice-President had it been expected that any one of them would have become Chief Magistrate. As a matter of fact, however, no fewer than three of them did, to wit, TYLER, FILLMORE, and JOHNSON; but not one of these went out of office with even the modest reputation which he brought to it.

On the other hand, when THOMAS A. HENDRICKS, of Indiana, was nominated for Vice-President in 1876 and again in 1884, it was fully recognized that in respect of experience in high office and in personal popularity he was equal, if not superior, to the nominee for the Presidency on the same ticket. The same thing may be said of ALLEN G. THURMAN, the veteran Senator from Ohio, who ran for the Vice-Presidency on the same ticket with Mr. CLEVELAND in 1888. It was no less undeniably in 1894 that when Senator CHARLES W. FAIRBANKS accepted the second place on the ROOSEVELT ticket he was himself thoroughly qualified to discharge the duties of Chief Magistrate. Nor should we omit to mention JOHN A. LOGAN, who himself had been on more than one occasion the favorite candidate of his State for the Presidency, and who with much reluctance accepted, in 1884, a place on the Republican ticket second to JAMES G. BLAINE'S. Most frequently, however, during the last thirty years national conventions have put forward for the Vice-Presidency men whom they never would have dreamed of designating for Chief Executive, but who were selected for the purpose of planting particular factions or geographical sections, or on the assumption that their personal wealth would enable them to make large contributions to a party's campaign fund. Among the Vice-Presidents selected with the former aim may be mentioned WILLIAM A. WHEELER, CHRISTIE A. ARTHUR, and ADOLPH E. STEVENSON, while among those from whom generous subscriptions were looked for may be named WILLIAM H. KENDRICK, LOUIE P. MORTON, WHITELAW REED, GARRET A. FLORANT, ARTHUR NEWALL, and HENRY G. DAVIS. It is well known that in three of these cases the expectations based upon the bank accounts of the recipients of a Vice-Presidential nomination were grievously disappointed.

The fact that the quadrennial terms of no fewer than five Presidents have been cut short by death should suffice to warn national conventions to exercise exceeding wariness in their selection of nominees for the Vice-Presidency. All of these predecessors "ascending" in the post of Chief Magistrate occurred within the space of sixty-one years, and within the memory of men now living. Since 1841 a Vice-President has, on the average, succeeded to the Presidency through the death of his superior officer once in twelve years. In view of this fact it is fortunate that both of the great political parties seem now disposed to evince circumspection and forethought in the choice of a nominee for the Vice-Presidency, who, if elected, may succeed in the highest post in the gift of the American people and retain it until March 4, 1913.

Personal and Pertinent

MANY have faced the riddle of matrimony, and many have suggested substitutes for our present system. Some have suggested trial marriages for periods of varying lengths, and some have proposed no marriages at all. GEORGE BENJAMIN SHAW, the world's ardent in all things that matter, has at last tackled this problem also. His play, "Getting Married," examines the subject of matrimony in all its aspects, and finally with rebellious logic and Shavian lucidity he gives his decision that the world had better go on marrying after the ancient way.

Paris has gone wild over Russian opera sung by Russian singers and choruses. CHALAPINE, who made his American debut in New York last season, has won a brilliant success in MOISSE MOUSNIKOFF'S opera, "Bois Godomoy," based on PRICHINE'S drama. The critics of Paris call it a masterpiece, and all agree that it surpasses in dramatic power anything of the kind ever seen at

the Paris Opera. It is hoped that America will have a chance to hear this opera, so typically Russian. MOUSNIKOFF, the composer, is, unhappily, dead, so his great success has, as in so many instances, come too late.

In the *Sua* for Sunday, May 24, an old friend welcomes an old friend in these words:

We respectfully notify the administration of the esteemed establishment which fortunately escaped destruction early yesterday morning that they have done a rather cruel thing in putting forth this month's *Monthly* in the new familiar format of the last century; that is, unless the benevolent intention is to resume and stay resumed. For hundreds of thousands of Americans, educated years ago in this particular school of superior literature, the reappearance of the columns, the capitals, the basket-bearing cherubs, the spriggy rods, and particularly the infant blower of soap bubbles, seemed so impossible and in such constant danger of sliding off into the inkstands below, will be both a reminder of past joys and a stimulant of present affliction. In the most friendly spirit the *Sua* protests against any return to the vagaries of contemporaneous art in the matter of cover design.

The magazine itself was never so good as it is to-day. The cover of the magazine has never been so good as it was in the ancient days of the beginning.

What is the greatest thing in the world?

Ask the scholar, and he gravely tells you that learning is, for that comprehends and promotes all.

Ask the preacher, and he tells you that religion is, because it is a light from heaven.

The lawyer declares: "Justice, for it is the soul of peace and progress."

"Money," says the banker. "For it is the spring of all action."

Ask the young man full of hope and spirit, and he replies: "Ambition."

Ask the weary old toiler, and he tells you: "Rest and content."

Then meet a shuffling, grinning fool and put to him the question. He answers and says: "I don't know."

And which, think you, is the wiser of them all, from the scholar to the fool?—Pittsburg Press.

None of them is wise; not a good guesser in the lot. The only real dispute about the greatest thing in the world is whether it shall be called Love or Truth. A very silly piece of literature on this subject, not as familiar perhaps to Pittsburg readers as it deserves to be, is the story of the disputants before King DARIUS, which runs through the third and fourth chapters of the first book of *Kodras* in the Apocrypha. Here is the closing passage of it:

As for truth it endureth and is always strong; it liveth and conquereth forevermore.

With her there is no accepting of persons or rewards; but she doeth the things that are just, and restraineth all unright and wicked things; and all men do like well of her works.

Neither in her judgment is any unrighteousness; and she is the strength, kingdom, power, and majesty of all ages. Blessed be the king of truth.

And with that he held his peace. And all the people then shouted, and said, Great is truth, and mighty above all things.

FRANÇOIS COPPÉE is dead, and with him passed away another of that brilliant group that dominated French literature a quarter of a century ago. FLAUBERT, ZOLA, DAUDET, all are gone, and lately LÉONIE HALÉTY and FRANÇOIS COPPÉE. Whether in or out of the Academy, these were true immortal, real giants in literature, and a noteworthy feature about them is the poverty in which most of them were born and bred, and the odds they contended with while practicing authorship. ZOLA was a clerk by day and did all of his early writing at night. DAUDET began as an usher in a school, and later, when he came to Paris, starved in a cold garret while composing his first volume of verse. FLAUBERT lived a frugal country life at Croisset; his friend and pupil, MAUPASSANT, held a government clerkship at \$300 a year; and FRANÇOIS COPPÉE also began his career at some such stipend in the office of the Ministry of War, where his father had served before him. Even after their success and recognition came most of these men lived a life which our own successful and popular authors would deem little better than destitution. FRANÇOIS COPPÉE, successful dramatist, novelist, Academician, lived in a small dwelling in the Faubourg St. Germain, content to work in peace and quietude. His hobby was instinctive and spontaneous kindness and generosity to the poor, and this idea he constantly preached as a cure for all our present social ills, including anarchy. "The poor creatures, the anarchists," he held, "are savage because they encounter nothing but unkindness and savagery in society." He was a dear and familiar figure to the students of the Quartier, as he took his gentle walks in the Luxembourg Gardens, his pockets laden with crumbs for the birds that flocked about him. The birds knew that their kind old friend never forgot them, and crested about him joyously, while the students watched the "Master," as they called him, with that reverence with which the young Frenchman always regards genius. A charming, gracious figure is that of COPPÉE, man of genius and man of letters; and one reason we see no parallels in our own country is that poverty is dreaded more and genius respected less in America than in France.

WHY JAMAICA NEGROES ARE NOT DRUNKEN

New York, May 18, 1962

To the Editor of Harper's Weekly:

Sat.—A letter in your issue of May 11 makes reference to the infrequency of drunkenness among the negroes in Bermuda notwithstanding the amount of liquor they consume, and you ask the writer of the letter to tell why this is so—"if he knows."

He thinks the reasons are two: alcoholic drinks have been freely consumed in Bermuda for generations—long enough, in any event, to produce almost complete immunity, under ordinary conditions, against acute alcoholic intoxication.

There is much in this. A person may be fatally poisoned by taking one grain of a drug that under repeated dosage, steadily increasing in size, may reach one hundred grains in twelve months or so, and with no more harm than that produced by a single grain at the outset.

A second reason is the utter lack of restraint placed on the sale of intoxicants in Bermuda.

It is a curious fact that so soon as man is denied the doing of a certain thing, there at once arises in him a strange desire to do that very thing.

If the people of any country should be permitted to drink all the good liquor they might want for two or three generations, there would be at the end of that time a country as free from the effects of alcoholic drunkenness as we are among the people in Bermuda to-day.

It would be a big price to pay, and require a long time to discharge the obligation. The question is, would the result be worth the cost?

I am, sir, etc.

^a "Scientist."

SOME VIRTUE IN RUM

To the Editor of *Harvard's Weeklies*:

Now,—Referring to an article entitled "Eum," on page 33 of your issue of May 10, 1908, I feel forced by long and intimate knowledge of the subject to take exceptions to some of the statements therein made.

The opening sentence of the article written in 1915 I have read many times, and have no doubt that it may have been true at that time, but the rum made in this country at the present day is an entirely different article, and is far ahead of the Jamaican rum so much extolled by the *London Lancet*, as follows:

The author went to considerable trouble to seek up old authorities on the question of the therapeutic use of rum, and—somewhat astonished to find them speaking so highly of this particular spirit. It was stated by one of these authorities that rum had a more decided action than either brandy, whiskey, or gin in the treatment of cholera, and that it was the only spirit which produced perspiration, and, finally, the important statement was made that rum was one of the very best alcoholic restoratives, its action being not more slack in the pen, but of a steady and conservative character. Dr. Edward Smith, Dr. James Inman, Dr. J. C. H. Williams, and Dr. J. C. H. Williams, all of whom are named stated that the old-fashioned combination of rum and milk is the most powerful restorative with which he is acquainted. Dr. James Inman stated that "for internal use in cases of phthisis and similar diseases, rum and milk is far better as a means of supporting life in the body than cod liver oil." The author has not been able to find any other authorities on this, and can personally vouch for the truth of the matter.

And speaking of the "rise and fall of rum," its rise was contentious, until about in the 1860's, when rum became a chapter article from which to make whiskey or alcohol that molasses for the manufacture of rum, and rum began to lose its prestige as the national strong drink, and whiskey to take its place. Rum costing less than whiskey, and being made from molasses, it was more palatable with both, and it became almost impossible to get pure rum anywhere outside of the distillery in which it was made. But the Pure Food Law is changing the above facts, and to-day more pure rum is sold on the market than for many years. The "new" strong gin has been suggested for Africa, and, no alcohol but whiskey is cheap gin do get in Africa. Large quantities of rum still go there, and if you will refer to the annual Report of the United States Commissioner of Internal Revenue, you will find that there has been no material change in the distillation or shipment of rum for twenty years at least.

Distilled from whatever may be, and in whatever quantity, to increase in the form of rum, whiskey, gin brandy, wine or beer, are bad characters, but there is no earthly reason why rum should be singled out as the one liquid to go to the wall. Scotch whiskey has been a bad gin has been a bad, rice and bourbon have today their devotees, and it is quite probable that the bad for old rum is the worst of all. But if you will refer to the annual Report of the United States Commissioner of Internal Revenue, and the consumer could not see old rum at a fair price,

The number of small distilleries has decreased, but those operating in Boston today have a much greater capacity than the larger number of small houses had thirty or more years ago. In 1906 my own house was compelled to abandon its old distillery, then the largest in New England, and erect a much larger one, and we now operate what we believe to be the largest and best rum distillery in the world.

The substitution of beet for cane sugar has had no effect in the rum trade, as no rum is ever made from beet molasses, although alcohol may be.

Instead of the day of rum being over, as your article states, statistics will probably show that the sale of rum has hit the poorest people in this country less than any other liquor, for which

I will find you proved when the next annual report of the Commissioner of Internal Revenue is published. The report of the Commissioner of Internal Revenue for the year ending June 30, 1907, shows the following figures as to:

Produced during the fiscal year, 2,022,407.4 gallons, an increase over the previous year of over 300,000 gallons.

Exported, 944,239.2 gallons, an increase over the previous year of about 150,000 gallons.

The name "race" as a generic term has always been in contempt. The projectors and will probably always remain so. I do not object to the preaching of temperance in drinking, as I would preach temperance in all things, especially wine, women, and song—possibly religion, language, tobacco, bridge whist, and some other things, but I certainly do object to the stinging call of the *hymns* run to bear the shame and contempt of all humors.

Do you not think it just and fair to give my side of the subject the same prominence you have given the traducer?

1 am, sir,

F. L. F.

SLAVE SHE KNEW THE BOY

Reviews, May–May 26, 1962

To the Editor of Hester's Weekly:

Sia—I have been a subscriber to your publication for many years, and in common with many of your other readers have objected to the unfair attitude which you have taken toward the administration. I am always anxious to read the opposite side of the political situation, which has been one of the reasons that I have persistently read the WEEKLY, but in attempting to read the opposite side I desire that it shall always be fair and temperate in its presentation. I find that the WEEKLY is becoming more and more so, until I can find that my education is being improved by your editorials. It is only possible to compare you to the woman who was the mother of a small boy, and regarding whom—addressing his nurse—she said, "Go tell Tommy to stop," and being asked what his indiscretion might be, said, "No matter what he is doing, tell him to stop." That represents about your attitude toward the President, and I can see no further enlightenment to be had from continuing to read the WEEKLY. I am, therefore, dropping my subscription, requesting me no to do so again; and, therefore, dropping my name from your list of subscribers.

f. 100. 114. etc.

MONTGOMERY BOLLANS.

EXTRACTED

Handwritten: 5000 5000 5000 5000

To the Editor of *Harcourt's Weekly*:

5. State what you think of the man who with one eye puts a penny in the contribution-box and with the other takes a shilling out of it? What do you think of the man who, under the stimulus and frenzy of liquor, presumes temperance? What do you think of the man who pulls off his coat, rolls up his sleeves, dashes his hat on the ground, and then, with a high shout, dashes his fist into the public road, and shaking his mighty fist at the passing crowd, invites one or all to come on and fight if they desire so to do? What do you think of the ethics and ultimate tendency of thus educating the fighting spirit as a promoting element of domestic peace? What do you think of the ethics and ultimate tendency of this? "Whosoever slays by the sword will perish by the sword."

[illegible]

In conclusion, inasmuch as we have seen from the history of the world that fighting has not brought "peace on earth and good will to men," would it not be well to try something else—for instance, the golden rule among nations?

WILLIAM P. HAYES, M. D.

Now, the average man, heretofore, is not a violent, bad man. Wars—slips—are an important form of insurance. They do not stir up war; they prevent it. Armament is a bad disease, but it must run its course. It is fast working out its own cure.—KERR.

Finance

Uniform Railroad Accounting

By HOWARD SCHENCK MOTT

In the good old days, before the business of transportation was regulated, partly by public opinion but more rightly and specifically by government, bookkeeping that suited insiders, and insiders only, was my-sterious and very profitable to the few. But even the heritage of these degenerate days does not seem to be entirely free from parasites for the chartered accountant. What wonder, then, that the rank outsider burns midnight oil in a patient endeavor to find out what his securities may be worth?

Still it must be conceded that public opinion has accomplished something in the way of regulation by requiring more and more publicity about the affairs of railroad companies. It is a kind of regulation that the insider can least afford to ignore, because he needs the co-operation of invested capital for the growth and development of his road. In the last analysis government regulation is merely the organized backing of public opinion. The particular methods of government regulation are wholly right or desirable in themselves by no means follows. Neither does it follow that the methods employed conform in our traditional ideas of the proper functions of government. That the Interstate Commerce Commission, as a department of the government, represents public opinion as to the necessity for organized supervision over the railroads must be admitted. Some means of controlling large corporations and doing away with the abuses that frequently infect their management is obviously necessary for the public welfare. All of the methods employed, however, are not obviously the best to serve the purpose in view.

As of July 1, 1907, the Interstate Commerce Commission required that carriers conform to certain new methods of keeping their accounts. At that time, and since, the new accounting requirements have been a subject of heated discussion among railroad men, in financial circles, and in the press, yet a comprehensive understanding of their intent and practical application seems to be wanting. Even railroad accounting officers have been, and in a measure, still are at sea about their scope and ultimate effect. In the financial community some guesses have been hazarded, but the prevailing comment is that they are not understandable.

The subject is technical of course, but every one interested in railroad securities should consider it seriously and grasp its general import. The Interstate Commerce Commission bases its authority to prescribe the new accounting methods upon section 28 of the Act to Regulate Commerce, which empowers it to require annual reports, to prescribe the manner in which such reports shall be made, etc. A study of the several accounting circulars shows that the intention of the commission clearly is to so simplify and standardize railroad accounting that he who runs may read and may know at a glance the comparative financial condition of a railroad company at any time. To such a purpose there can be no valid objection. The question arises, however: Is the purpose accomplished, and if so, to what extent?

Until July 1 last most of the railroads published monthly statements showing three items, namely, "Gross Earnings," "Operating Expenses," and "Net Earnings." A few did not publish any monthly statements. "Gross Earnings" included earnings from all sources during the month. "Operating Expenses" all expenditures for the conduct of the business, and "Net Earnings" represented the earnings remaining after all operating expenses had been paid. Most of the railroad companies continue to make these reports. In addition, however, they make monthly reports to the Interstate Commerce Commission, which are published. The latter contain items called by different names: "Total Operating Revenues," "Operating Expenses," "Net Operating Revenues," and "Operating Income," the last being arrived at by deducting taxes from "Net Operating Revenues." These are the primary accounts required in annual reports. The word "operating" gives the key to the distinctions. Only the revenues and the expenses of transportation and operations inseparable therefrom are included. The commission requires that the operations of mail lines, fast lines, express lines, dining car service, and twenty-two other operations in which a railroad may be engaged shall be reported separately as to both earnings and expenses as "Outside Operations."

On the face of things, therefore, if the available monthly figures of a year ago were compared with the figures reported to the Interstate Commerce Commission, the conclusions reached must be inaccurate. So far as the stockholder of a railroad company is concerned, what he wants is a basis for accurate comparisons. The requirements of the commission in these respects amount to nothing more than a substitution of earnings and expenses of their details must be left to the judgment of professional accountants. In the past taxes have been included by many of the railroad companies in "Operating Expenses." Fairness of treatment with regard to this item and its separation from "Operating Expenses," however it may temporarily confuse comparisons, lies in the recent treasury threat to its increase and the burden of taxation has a desirable objective from several points of view.

When the Classification of Operating Expenses" is considered,

there seem to be real difficulties, and some of the requirements appear questionable, even in the layman. For example, the commission prescribes that "all the costs of maintenance and as much as the costs of maintenance shall be charged to the maintenance accounts of operating expenses." This general prescription evidently carries the intent, first, of compelling the railroads at all times to maintain their property, and second, of preventing charges to maintenance accounts of money really spent for improvements which give added value to property. So far as the prohibition of charges in maintenance accounts for improvements is concerned, it will apparently, if carried out, diminish the opportunities of the insider to build up "hidden equities" in a railroad property which he can take out of his hands by causing to make heavy charges for improvements to those accounts; but it will also make necessary the raising of new capital for all improvements, no matter how bad the condition of the investment markets may be. Considering the experience of the railroads in the last year or two, the entire wisdom of so strict an interpretation of this requirement does not appear to the business man.

Perhaps no feature of the new classifications of earnings and expenses has aroused more discussion than has the establishment of an entirely new account in "Operating Expenses" called the "Depreciation Account." No one will be disposed to question the advisability of providing in some manner for inevitable and unavoidable wear and tear on equipment. All well-managed manufacturing concerns make provision out of income for depreciation. The question of the best method of doing it on a railroad, however, is a very knotty problem. The Interstate Commerce Commission has decided that the basis of depreciation shall be the probable life of a locomotive or a car, leaving to railroad managements the determination of the element of time and the amount to be charged off to depreciation, not each year, but each month. According to the Wall Street summary, a few railroad accounting departments have reached the conclusion that the average life of equipment is about twenty-eight years, making necessary a depreciation charge at the rate of 3 1/2 per cent, of the total value of equipment owned. This is purely arbitrary; it is guesswork, and, as has been well said, guesswork has no place in accounting.

Obviously no exact determination of the question can be made when it is remembered that the quantity required a locomotive or a car may need varies with a great many conditions, as, for example, whether the equipment is in use or is idle. Moreover the depreciation charge, as prescribed, takes no account of the fact that the life of different kinds of locomotives and cars differs irrespective of the conditions surrounding them. Some accountants prefer a depreciation charge based upon the service that may be expected of a locomotive or a car and the amount of service rendered; but even this method has the weakness of failing to consider deterioration while idle. The requirements of the depreciation charge are haphazard, and to that extent are unjust to the railroads in that they make one item of expense that is irreducible in times of slack traffic. Railroad managements may interpret the discretion given them to meet actual conditions somewhat after the manner in which the United States Supreme Court interprets our Federal Constitution. But such a situation points the way to endless confusion and the possibility of any corporate abuses.

From the point of view of the owner of railroad securities who desires to keep track of the earnings and expenses of a railroad company, as shown in monthly statements and annual reports, the depreciation charge introduces an utterly puzzling factor. He knows that the requirements of the commission are being complied with by some roads and not by others, and so in those which comply he can have no exception of the manner in which the discretion of railroad managements may be exercised. He will naturally, also, seeing its possibility of distortion, exercise of discretion. This year uncertainty must be compared with a fair degree of certainty last year; next year uncertainty must be compared with uncertainty.

Some years ago the Interstate Commerce Commission made heroic efforts to ascertain the exact cost of doing the business of transportation, and it failed. It failed in its attempt to fix the cost of transportation in terms of freight, money per mile and passengers carried one mile. The determination of the unit of cost in any business is a very desirable thing, but the railroads then, because of the complexities of the problem, convinced the commission that a reliable classification could not be made. Probably the exercise of discretion in freight rates will never be tested by experience, but the superficial aspect of them surely is theoretical. The chartered accountant seems to be no more able to predict the outcome than does the veriest tyro at accounts. The direction of the commission's labors appears to be, first, to obtain exact data as to the cost of transportation, having first carefully established the question of physical valuation of the railroads and the determination of rates therefrom, and second, an absolute separation of all other business activities from the actual conduct of the business of transportation. These may be desirable things in themselves; but meanwhile it looks as if the road men, the boards and the investors in their securities are being led into the mazes of confusion. And if publicity of railroad affairs were one of the ends sought, the commission has already met defeat.

For the Kingdom of California

THE TRUE STORY OF SAN FRANCISCO'S CIVIL WAR BETWEEN THE GRAFTERS AND THE ELABORATE FORCES OF THE PROSECUTION

III.—HOW THE PEOPLE LOST FAITH IN THE PROSECUTION

By WILLIAM INGLIS

AS the Abe Ruef immunity contract honest? There is the question upon which public opinion of the San Francisco graft prosecution has split. Was that contract made solely in the interest of justice? The prosecutors say it was. They declare that the most important work they had to do was to convict corporate officials of bribery, and that such conviction was impossible unless they had the testimony of all the self-confessed hoodling supervisors, reinforced by the testimony of their master, Ruef himself. To obtain this evidence, they say, it was necessary first to grant immunity to every one of these acknowledged criminals. True, the prosecutors had promised at the outset to punish all the guilty; but on reflection they found it necessary to spare some in the hope that thus they might reach others.

The accused corporation officials declare that the contract guaranteeing immunity to Abe Ruef was the very keystone of the conspiracy of millionaires privately controlling the prosecution to ruin them, disperse them, and get hold of their properties cheap while posing as champions of civic parity and reform.

Which of these contentions is true? Perhaps it would be more accurate to inquire which contains the greater proportion of truth; on which side would a jury find the preponderance of evidence? In San Francisco at this moment public opinion is very largely on the side of the accused corporation men. Perhaps the best illustration can be found in the recent trial of Tivy L. Ford, attorney for the United Railroads. Mr. Ford, formerly Attorney-General of the State of California, was accused of having bribed

Abe Ruef with \$200,000, thus inducing him and enabling him to bribe the righteous supervisors to give permission to the United Railroads to use the overhead electric trolley system. On General Ford's first trial, held at a time when the public clamor for revenge upon all hoodlums was at its fiercest pitch and public confidence in Mr. Speechels and his prosecution was still unshaken, the jury stood right for acquittal to *him* for conviction. A few months later General Ford was tried again on the same charge. He was acquitted. A short time ago General Ford was put on trial the third time for the same offense, though the name of a different supervisor was used.

Then came a startling revelation of the state of the popular mind. Nearly every layman examined as to his fitness to serve on the jury promptly said he didn't believe he should serve, because he had an opinion. What was that opinion? The prosecutor asked. The answers are as follows:

"I believe General Ford is innocent."

"I think the prosecution is hoodwinking General Ford."

"I think it's wrong for the prosecution to let all the grafting city officials go free and punish corporation men."

Then was presented the spectacle, rarely or never seen in any American court of justice, of the public prosecutor chal-

lenging for bias nearly every citizen called for jury service. It required many days of hard work to fill the jury box. Then the evidence for the prosecution and for the defense was submitted, and the jury after five minutes and forty-five seconds' absence returned their verdict that General Ford was not guilty. There was loud applause in court, as well as general public manifestation of approval. General Ford is still on bail under other indictments for the same alleged offense, and it is still uncertain whether or not he will be further tried.

No much for popular opinion. Now let us examine the history of the Ruef immunity contract which more than any other cause has led to the revelation of public sympathy from the prosecutors to the prosecuted. We have already seen that Ruef refused to "come through" and conspire to the prosecution until their real promise of immunity was backed by Judges Dume and Lawler in their sworn oaths of Rabbin Nirtle and Kaplan at their midnight swearing. Thereafter a contract was drawn up in due form whereby District Attorney Langdon and Mr. Hovey guaranteed that, if Abe Ruef would tell the truth about the graft cases and testify to it on the various trials, they would grant him immunity in all cases except No. 305, one of the French restaurant bribery cases. On May 8, 1907, this contract, signed by Messrs. Langdon and Hovey on the one part and Abe Ruef on the other, was taken in escrow by Rabbi Kaplan and Detective William J. Hurras who placed it in a safe-deposit box, whence it could be taken only by themselves jointly, and there it remains to this day.

Soon rumors began to fly that Ruef was to receive immunity—for it must not be forgotten that the detective corps of both sides dugged everybody sedulously—but these rumors were denied by the members of the prosecution. Indeed, as late as last October, five months after the contract was made, Mr. Hovey in his campaign speeches on behalf of Mr. Langdon, then running for reelection as district attorney, said:

"Abe Ruef asked me for immunity, but I told him to go to hell! If one man is to be punished, that man is Ruef!"

It is curious that intermingled with Abe Ruef's remarkable intellectual ability as a commanding general of grafters there is a weak strain of petty vanity. He craves all ways the spotlight and the centre of the stage. Under the terms of his immunity contract his first public appearance was at the trial of Mayor Eugene Schmitz, plainly indicated with him for taking a bribe. The detective Hurras helped to prepare Ruef for the performance.

"We'll make a sensation of it," said Hurras, as quoted by Lincoln Steffens. "We'll keep it dark till the day of the trial. The court-room will be filled, everybody will be there, on watching, and you and Schmitz will be arranged. I wouldn't tell even my own attorneys, if I were you. Oh, well, one; tell him. — But posted to tell him in court; let him tell the others. They will jump, and you can all go off in a safe-room and have an agitated conference. We'll play our race, our side, and you can

The Rev. Bernard M. Kaplan

THE BASH CALLED IN BY DE NITRO TO HELP THE PROSECUTION TO PERSUADE RUEF, AND WHO IS NOW, WITH DETECTIVE HURRAS, JOHN GARDNER OF THE BUREAU OF INVESTIGATION, IN CHARGE THAT THE PROSECUTION HAS NOT KEPT FAITH WITH RUEF

come back all paralyzed. The attorney you tell might walk up and down as if he were suffering and angry, while you read your statement— And, say, that statement: we can make that a perfect corker. I'll help you on it. You can act as if you drew it up at your little conference, but by preparing it in advance you can make some thing that'll move the whole room to tears, and the town. Even the judge will feel it, and Schmitz—! Say, the Mayor will drop in his tracks; for I can give you this straight: Mayor Schmitz is not expecting you to do this."

Ruel played his part with flourish. He returned a while with his attorneys, then came forward and said he was ready to testify. Up to that moment there was not much evidence tending to convict Schmitz. Ruel was the star witness, happy in having secured the undivided attention of every man in court. He began by telling of his ambition, as a son of California and a graduate of the University of California, to serve his native State to the best of his ability. But he went into politics, and his associates dragged him down. He had accepted a bribe from the French restaurant keepers, he said, and divided it with Mayor Schmitz. Now, under arrest and facing punishment, his family sick, ostracized by his disgrace, he had decided from now on to "destroy the system that destroyed me."

This is the merest epitome of Ruel's testimony. He stopped at times to dry his eyes and gain control of his voice. He often sipped water to revive his flagging energies. At the end of the oral he sank exhausted into his chair.

Then Mr. Campbell, Schmitz's counsel, began to cross-examine Ruel. Instantly the wily little man ceased to droop and became alert and aggressive.

"Has immunity been promised to me as a reward for your testimony?" asked Mr. Campbell.

"I hope for bribery," was Ruel's reply. At that moment Ruel's immunity contract was lying in a sub-deposit box, signed and sealed by Langdon, Heney, and Ruel. Judge Frank H. Dunne, presiding at the trial, had guaranteed the immunity. If all these things were known, the jury might have taken a different view of Ruel's testimony. But the contract was concealed with exceeding care.

The minutes of the trial show:

Q. Did you tell them you would not stand for anything save and except complete immunity?

MR. HENRY: That is objected to as irrelevant, incompetent, and immaterial, and no proper foundation for it.

THE COURT: Sustained.

Counsel rearranged the question, and again Mr. Henry objected. The cross-examiner inquired whether the objection was really sustained. We quote the record:

THE COURT: Yes. He has told you. He has answered you three different ways. It seems to me, it seems to me that it is enough. We are taking up a good deal of time, I think.

Counsel still pressed the question as to bribery, and was thus shut off:

THE COURT: You keep asking him the same question. You are using equivalent language; it is the same time, the same purpose. I have no objection to your asking if he is going to receive immunity and let it go at that; but you are asking the same thing in different forms every question. It is taking up time. I want you to get through with the examination.

Why was Ruel so resolutely guarded by court and prosecuting counsel from all cross-examination as to his immunity, when the prosecutors knew they had granted immunity? The members of the prosecution now declare that they did not guarantee absolute immunity; that all they promised was to free Ruel on condition that he testified in the whole trial; but here was a special arrangement to protect him as (see 26). But, the prosecutors add, Ruel has not told the whole truth, inasmuch as he has studiously refused to testify that any corporation official ever bribed him; therefore the immunity contract is void from the beginning, and we need not think that any sane thing ever existed. This sort of reasoning may be convincing, or it may not.

If there really was no promise to free Ruel it is difficult to understand why he was so tenderly protected from cross-examination. Difficult, too, is it to understand why the prosecutors watched Ruel into Judge Dunne's court regularly once every two weeks from May 13, 1907, until late in January last, to be sure, and why on every one of these occasions, during a period

The Rev. Jacob Nieto

MEMBER OF THE CONGREGATION WITH WHICH ARE REEF AND HIS FAMILY ARE AFFILIATED, AND WHO, AT THE INSTANT OF THE CHAFF PROSECUTION, HELPED TO PERSUADE REEF TO CONVEN

lag from the bench of the Superior Court, publicly expressed his regret that he could not appoint an elisor for the judges of the higher courts. An elisor is a special taker in place of the sheriff. The prosecution kept Al Ruel for months in a private home in the custody of an elisor so that no outsider could get at him and influence his mind.

Schmitz was admitted to bail in \$345,000, which was furnished by a friend, and he is now at liberty in the palatial home he bought after he had been Mayor for a while. And it is a remarkable fact, worthy of note in this page of contemporary history, that when Schmitz first attended the elaborate law firmings after his release on bail, the audience loudly applauded him, and more than a hundred men crowded around to shake his hand. Great is San Francisco of the Californians! Poor little Ruel had his bail reduced to a trifle less than one million dollars, but no bondsman has taken her appearance.

By the terms of the immunity contract Messrs. Heney and Langdon promised to set Ruel free on the last day of the year 1907. The day came, but they did not set him free. Ruel protested. They told him that he had failed to tell the whole truth (which should have been corporation officials of bribery), and that therefore the immunity contract was void.

"But if I say they bribed me I shall not be telling the truth," Ruel insisted.

"They did bribe you. It is the truth," the prosecutors still replied. "You have not kept faith. You shall not go free. Come through, and we will set you free."

Ruel refused freedom on these terms. Then Habers, Steins, and Kaplan, the reverend gentlemen upon whom Ruel relied for confirmation of the immunity contract, threatened to make public the existence of the contract if its promise was not kept. Thereupon Mr. Langdon, on January 18 last, published the full contract in the newspapers of San Francisco.

This was the signal for a storm howl which all the others were feeble rephrases. It is hardly an exaggeration to say that everybody on one side accused everybody on the other side of every form of crime and villainy and every imaginable form of bad faith.

Judge Frank H. Dunne
WITH PHOTOGRAPH REEL FROM
CROSS-EXAMINATION

Ruel applied to Judge Dunne to have his arraignment in Case 303 set aside, and upon that application there flowed forth a flood of marvelous affidavits. Contradictions, assertions of fraud and the like ran rampant. Throughout the whole affair one finds a bitterness and fierce vindictiveness impossible to discover in any other place than this rich land where every prospect pleases and soon light with all the fury of Barter's.

Rabbi Kaplan in a long affidavit gave his version of the making of the immorally contract, substantially as related here, and containing as follows:

"As late as the day when the prosecution closed the testimony in the first Ford trial, Mr. Langdon and Mr. Henry both assured me that the agreements with Mr. Ruel would be kept. Mr. Henry stated to me in his office that he never went back on his word, and that he had his reasons for not calling Mr. Ruel as a witness in the Ford trial, but that he would put him on the stand in the Calhoun case, which was shortly to be tried, and said in substance that 'Mr. Ruel is no fool, and that he would say all that is expected of him in the Calhoun case.' At that time Mr. Henry said that Mr. Ruel was withholding some testimony, and asked me to get Mr. Ruel to furnish the testimony referred to.

"Subsequent to that time I have had a number of interviews with Mr. Langdon and with Mr. Henry, in which they have assured and stated to me that the contracts and agreements with Mr. Ruel would be absolutely and faithfully kept. Mr. Langdon stating to me at one time in his house that even if others connected with the prosecution should want to go back on the agreements, 'no one could make him do wrong,' and that he would keep the agreements.

"During the early part of January, 1908, and up to the 18th day of January, 1908, I had a number of interviews with Mr. Langdon and with Mr. Henry, during all of which they assured and stated to me that the contract between the prosecution and Mr. Ruel would be kept."

Rabbi Nieto made a similar affidavit.

Judges Dunne and Lawlor made affidavits denying with much vigor that they had promised to discharge Ruel on the motion of the District Attorney. Ruel himself entered an affidavit of forty-seven long printed pages which included this account of the breaking of the contract on January 17 last:

"After a few questions Mr. Langdon, much to my surprise and astonishment, stated to me in substance and effect as follows: 'I have been willing to keep these contracts; I am willing yet, but I find that it is impossible. I must now declare them cancelled and at an end, because the judges will not stand for them.'"

Mrs. Langdon and Henry made affidavits denying the assertions of the rabbi and Ruel. Mr. Henry delivered a long and fiery speech before the students of the University of California denouncing Ruel and all the indicted corporation officials. He said:

"The condition in San Francisco to-day is far more dangerous to American liberty than that that existed when the hoodlums board was in and Abe Ruel was selling their votes, because the men who are now conspiring together to intimidate the law officers from doing their duty, and to break down the power of the courts, trying and publishing most shameful things about judges, who are as pure as the driven snow."

In the next article will be shown the results of the graft prosecution up to date and the prospects for its future.

The "Sheath Gowns" which Shocked Paris

The Frenchwomen who ventured upon the Longchamps Race course in "Sheath Gowns"

THE "sheath gown" a revolt of the fashion of the Dictatorian period, has made its appearance in Paris. On the 10th of May two or three very short young women appeared in the enclosure of the Longchamps race course wearing sheath gowns, tight closely fitting garments, sleeked at the sides. The interest of the spectators was intense. As a result from the race, and no good was the result, that the women were arrested and conducted in a cab by the police, who wrapped their cheeks around them.

Four days later the new costume appeared in Lon-

don, being worn by a daring equestrienne, who galloped up and down Rotter Ross, in Hyde Park, for more than an hour, along a lane formed by two walls of excited spectators. Mr. Winston Churchill, the new President of the Board of Trade, who had turned round in the saddle to observe the phenomenon, collided with another equestrian, and the latter was nearly flung from his horse in consequence. A great crowd followed the career of the Dictatorian gown along Piccadilly. Prosecution by the police of both capitals was at first suggested, but ultimately abandoned.

It should be mentioned, however, that the opening along the side of the much discussed skirt is only eighteen inches in length, and is designed to be closed in with pleating.

The undisturbed Interest of the feminine Observers on the "Side Lines," and the fine Assumption of Indifference by the Sheath Gown Innovators

A Deal in Pictures

SOME ASPECTS OF A SENSATIONAL LAWSUIT INVOLVING THE AUTHENTICITY OF NOTED AMERICAN PAINTINGS

By SAMUEL SWIFT

OW that the law has been invoked by a well-known collector of American paintings against a somewhat conspicuous New York art dealer, the whispered charges of wholesale picture forgery, which have been rife for a considerable time, will no doubt be thoroughly settled. To many persons in touch with art matters it is surprising that these charges did not earlier find their way into publicity. Mr. William T. Evans, who now brings suit, is understood to have learned only recently of the suspicions against certain pictures sold to him by Mr. William Clausen, as the work of two artists now dead, Homer Martin and George Inness. But it was more than two years ago that another distinguished New York collector of American art compelled the same dealer to refund to him, in money and in other pictures, the large amount he had then lately paid for three canvases; one of these being the "Normandy Straggle" bearing the signature of Homer Martin. This collector was Dr. Alexander C. Humphreys, President of the

to the writer several hundred copies, with figures, signed by him, as going to show that his time had been fully occupied by work of his own. Among the paintings in the studio was a panel showing one of the familiar forest interiors of Thax, which had lost none of the glistening freshness with which its painter had so generously endowed it.

It was but late, however, that charges of so serious a nature as those in Mr. Evans's suit against Mr. Clausen should have been kept from printed circulation until the recent legal steps had made them public property, and set in motion the machinery for their adjudication. Mr. Evans brought suit after he had withdrawn from his gift of sixty American pictures to the proposed national gallery at Washington two canvases established as by Homer Martin, and one as by George Inness. The Martin pictures, "Near Newport" and "Old Mill Near St. Cloud," had cost Mr. Evans \$2500 and \$3500 respectively. All three paintings had been sold to him by Mr. Clausen. The collector withdrew these works because he became convinced that they were

spurious, and has replaced them by other and genuine examples, acquired expressly for that purpose. He demanded through his attorney, Mr. Frank B. Lawrence, that Mr. Clausen refund the \$5350 paid for the two Martins. Upon refusal, the dealer was arrested and spent a night in jail before bail could be arranged. Several affidavits were filed in support of Mr. Evans's complaint.

Into J. Karch, for fifteen years an employee in the Clausen gallery, told how fresh canvases mounted there were taken away, and how, later, canvases which, in his opinion, "were the same which had been sent away, were returned, having painted upon them pictures signed with the names of celebrated American artists, principally Inness, Wyant, and Martin." Charles General, another former employee, swore that he stretched such late canvases, and that they came back with

"Near Newport," a Painting sold as the Work of Homer Martin for which Mr. W. T. Evans paid \$2500, and which he now declares to be a Forgery

Stevens Institute of Technology. Still another, Mr. F. S. Smithers, a New York banker, after investigating what he had heard about a certain costly picture in his collection, succeeded in making a similar settlement with this dealer.

At the time these events took place, Mr. Clausen was of course informed of the widespread reports regarding suspicious canvases bearing the name of Martin, which he had exhibited in his gallery as 1900 and thereafter. Further, the painter who denied the other day in newspaper interviews that he had perpetrated art forgeries, after his name had been unofficially mentioned in connection with Mr. Evans's suit, was also informed two years ago, or earlier, that rumors involving him were current. This task fell to the lot of the present writer in May, 1900, in pursuance of journalistic duty and it was performed in the painter's studio in Lyme, Connecticut. On that occasion Mr. Arthur Dawson, the painter in question, exhibited

"Newport Neck," an authentic Work by Homer Martin, owned by the Lotus Club of New York, similar in Theme to the alleged imitation presented above

"Afternoon at Medfield," a Painting signed with the Name of George Inness which has been placed under Suspicion by Mr. Evans's withdrawal of it from Exhibition at Washington

pictures freshly painted on them, bearing the names of Martin, Wyatt, or Inness, these artists being then dead. The *Graphic* affidavit continues: "I remember the picture called 'Near Newport.' I fitted it into its frame when it came into Clauson's establishment, in or about the year 1902. It was then a freshly painted picture. It was only a few weeks or at most a few months old at that time." *Graphic* made a similar statement about the "Old Mill Near St. Cloud."

Arthur C. Friedrich, a dealer in canvases, declares that one of the two Martins withdrawn by Mr. Evans proved on recent investigation to have been painted on canvases made in his Mount Vernon factory in 1902 or 1903. He had sold much of such canvases to Clauson, but none to Martin. There were further affidavits, including one by Frederick W. Kost, the artist, charging that Clauson had referred to "the whole picture business" as a "house game." In reply to all this, Clauson denies the pictures, while *Evans* admits having retouched them, but declares they are genuine.

The reader will have noted that not one of the above affidavits hinges upon the presence or absence of artistic quality and character in the pictures of disputed authenticity. This fact suggests the difficulty of proving in any way satisfactory to a court of law the genuineness or falsity of a picture by a dead artist. Homer Martin died in 1897, and George Inness in 1894. If it can be established that works signed by their names are painted on canvases that was not manufactured before 1902, the proof is accomplished. While it is not an easy task to adduce such facts, Mr. Evans has announced it as his intention to do so. As to the intrinsic quality and truthfulness of a work of art, it is to be determined much as one would judge the authenticity of a page of handwriting. Some of the imitation pictures sold in cheap shops and auction rooms are so preposterously lacking in plausibility that only the most gullible buyers are deceived—it is as though a scribe should strive to counterfeit the signature of a bank president. Deceptions like this are a source of profit to dishonest dealers, and they enable a certain number of indolent painters in Paris and New York to make a modest but comfortable living. Even Brooklyn has, or had, its salaried art forger, who for a fixed sum (such was the reticence and steadiness of his production) turned out a stream of nonexistent imitations of Diaz, Corot, Inness, Wyatt, Homer Martin, and other important and reliable painters. For a man to be worth to his employer forty dollars a week, at this obscure and nameless toil, year in, year out, implies an unbalancing market for his doubts. And he is, or was, only one of an army of subterranean art workers, here and abroad. Sir F. Gordon Clarke remarked the other day that a total of 25,000 pictures, signed "Corot" and passed through the New York Custom House

But these commonplace and low-grade frauds, reproducible as

"Sunshine and Cloud," a noteworthy Canvas by George Inness, owned by Mr. Evans, which, in its Composition and Treatment, strikingly illustrates the vigorous Style of the Painter

they are, have no dangers for persons of even elementary taste in art. It is only when the page of handwriting in question bears a considerable resemblance to the known script of its supposed author that the case grows interesting. When the point is reached at which experts begin to disagree, the public pricks up its ears. In the case of paintings, the question is widely and naturally asked: "If the supposed isolation is good enough to deceive all save a few experts, why is it not, for practical purposes, good enough to buy and to enjoy?"

Perhaps the best answer to this is that in the final test of living with such pictures, they are found to lose their piquancy and to disclose their true character. Paintings are like men and women. Their honesty, or the lack of

it, is invariably established in due time, clever and superficially appreciable connoisseurs have their day, and sometimes it is a relatively long one. They may make headway for themselves in high places, but they are ultimately lined out and rejected. A picture, to exert positive influence, must be more than a mere record of facts (else a colored photograph could replace it); it must express the character and personality of the artist, the emotional treatment of his own nature under the impact of what he sees. These qualities of a creative artist find utterance in the subject and in the design of his pictures, their relations of line and mass, the depth and luminosity of their color, the habitual bold and nervy formal or routine strokes of the brush over the canvas. These and other factors reveal the artist's personality, and they are just as much a part of him as his vocal chords and intellect when he speaks, or his characteristic way of forming the letters when he writes, or as his step in walking. Cheap mimics, for amusement or gain, can often simulate one or build a dozen of these typical modes of expression, but to these imitations the subject himself such performances are mere feats of virtuosity, and do not deceive for long. If at all. Every original work of a good artist shows a nervous tone, an out-spoken treatment of his material, a boldness of handling, that a copyist, no matter how skilled, can hardly ever attain. The creative vigor becomes in the imitation timid conformity. Beautiful in some degree the copy or the spurious work may be, but it cannot have the freedom and energy of the paternal utterance it seeks to reproduce. And he just so much, like an insubstantial man or woman, the nature work will lose its hold upon those who have made its acquaintance.

It is not charged by Mr. Evans that the two estimates for whose cost he is suing Mr. Clauson, are exact copies of any known paintings by Homer Martin. Rather, it is stated in the affidavits, that

these pictures seek to imitate the individuality of the dead painter, to speak with his voice and to write with his hand. It is part of the history of this now widely discussed case that these pictures passed for a time unchallenged by many persons familiar with American art in general and with Martin's work in particular. Veterans painters and experienced collectors were among those who looked upon them, and either said nothing or spoke words of admiration. Even from the first, however, there were those who failed to see in these two Martins truly representative works. The "Old Mill Near St. Cloud," for instance, suggests a certain lack of crispness and freshness of thought in its composition. The lines are flatter and more obvious than was typical of Homer Martin, whose exquisite poetic sense was supported by a brusqueness and fearlessness of expression that was part of the man's nature. The prevailing color of this "Old Mill" has a faint aroma of sickly sweetness foreign to Martin at any stage of his career. In the same way "Near Newport" is seen, on close and searching examination, to be somewhat deficient in the resonant power and directness of utterance that characterized Martin. A picture often bears on its face evidence of the heat and struggle

are also printed herewith. In the latter, the artist's brushes have moved with a positiveness and purpose that cannot fail to be noted even in the most delicate passages. When a man is responsible only to himself he can work with constructive imagination. If he tries to fit his steps into those of some pre-arranged pattern there can be no spontaneity.

With some such ideas in mind, owners of American paintings recently acquired have been scrutinizing their collections anew. By the verdict in the Evans case a dozen or twenty canvases will stand or fall. Before the proceedings are over there will be a more general knowledge of what were the essential characteristics of the trio of American landscape painters—Inness, Wyant, and Martin. If there has been a wrong done to the memory of these distinguished men, it will be recognized as at least equal in importance to any injury suffered by those who in good faith have bought pictures now impugned. All that dead painters can remain possessed of is the reputation slowly built up by ardent fans. George Inness was fortunate beyond his fellows in reaping fame and success in his lifetime.

Wyant's needs were simpler and his rewards came more gradually. Martin was less prodigious than either of the others, and he tasted little of the sweets of substantial recognition. To undermine the esteem in which such men are held by counterfeiting their work would be an unforgivable offense. It is a little curious to reflect that such deliberate imitation for purposes of gain should be confined to the fields of painting and literature—the literary "fake" is, of course, a familiar phenomenon. It would seem to be not impossible for an ingenious and unscrupulous composer to produce and sell alleged works by dead masters. Yet as far as is known, the thing has never been even attempted.

Whatever the legal outcome of Mr. Evans's suit, there will be certain practical results from this disagreeable business. Pictures will continue to be sought by collectors and the general public, but closer attention will probably be paid to inherent quality and less to organic form, even when there are fortified by a technique capable of temporarily deceiving the most experienced collectors. That would be a recommendation worth almost the price of an art scandal as grave as the one soon to be aired in court.

"Old Mill Near St. Cloud," purchased by Mr. Evans for \$2500 as the Work of Homer Martin, but now alleged to be a Fake

of a creative mind with what it seeks to express, and it is now the less eloquent on that account. It has been urged that "Near Newport" and the "Old Mill" look as though they had come into being too easily, too placidly. There is a scarcity that in time becomes monotony, even deathliness. Martin never sunk to a vulgar style, nor did the late A. H. Wyant, the breeding beauty of whose landscapes has never been successfully imitated, despite many attempts. George Inness, daring and throaty as he occasionally was, has been a shining mark for imitators, but it is not for another man's mind and an alien hand to tempt the free spirit that manifests itself in his representative achievements. Even the reproductions in black and white deprived of the benefit of color convey some notion of the differences of style pointed out between the suspected pictures and certain well-authenticated paintings by Martin and Inness which

"Mound Gatherers," a Painting by Homer Martin which is the Property of Mr. Evans, and is recognized as a representative Work of the Artist

THE POLITICAL SCHEMER

by

EDWARD LISSNER

DRAWINGS BY J. A. WILLIAMS

THE time, anywhere between nine and six. The place, the reception room in a suite of offices from which a campaign for the Presidency is being directed.

The editor of the clerk sitting at a large table, pasting clippings of the progress of the boom in a big scrap book, pauses and looks up. He hands him his card.

"You must state your business also."

"It is a private matter."

"I cannot take your card in until you tell me what you want to see Mr. Blank about. It is our rule."

He hesitates, then asks, "Will you take a note?"

"Yes."

The clerk goes back to the clippings while the visitor fills several sheets of paper. He is through at last, and the clerk tells him to wait.

The man goes in the room walks up and down nervously. He has stashed great things on the outcome of his visit. Are they destined to be realized? Will his importance be recognized by the committee? Is his idea destined to swing the pendulum of fortune the happier and more prosperous way? He looks at his torn shoes and shabby clothes. If only the chairman who is reading his letter could return.

The clerk returns.

"Mr. Blank is sorry, but he cannot consider your proposal."

The man, stunned at the news, turns and goes out, closing the door slowly after him.

"Another fellow with a scheme!" the clerk grins, then resumes pasting his clippings in the big book.

His view is that of headquarters: the man who came and went away in a moment. By this is meant that he is a member of the great army of the Unknown who could bring victory to Secretary Taft if Frank Hitchcock or Arthur Vorys would only listen; nominate Uncle Joe Cannon on the second ballot if Congressman McKinley were not so headstrong; build up a powerful Fairbanks machine in the North if Senator Hemenway would only see him; or make New England and part of the South and Middle West solid for Charles E. Hughes after the initial ballots if General Woodford and other friends of the Governor were not so stubborn. He is pathetic because, while a politician needing the apple, the man is either a novice or party hack and seldom able to obtain them.

Every political movement brings this element to headquarters, especially in case the candidate in whose behalf the campaign is being waged has means or the cause itself is backed by large sums of money. No better instance need be cited than a recent Presidential boom of a man who is rather obscure from a national standpoint. The boom started about seven months ago and culminated a few months later. Just why the statement is question should ever have entered the race is a problem many find difficult to solve, as his candidacy never had a chance of reaching the white stage. The man, however, began a vigorous fight for the nomination, and was aided by the possession of large means as well as the backing of a millionaire family. Headquarters which in point of luxury were far ahead of those of the real possibilities in the field were spread near a fashionable hotel. There was money behind the boom, and every one knew it. As a result, the managers in charge were obliged to dodge a steady crowd of men anxious to land the nomination of their man by various schemes—for a consideration. The situation reached a condition which compelled them to do much of their work away from headquarters and never to enter it except from a private hall. Another victim of these maneuvers in politics was William B. Hearst. This was especially so during his campaign for Mayor in 1905 and for Governor in 1906. If Max Thomsen and his other managers had adopted half the plans for victory which were submitted, there would have been no limit to the society of the canvass or the drama on the cam-

paign treasury. Tammany Hall is more fortunate in this respect.

The man with the scheme respects the prowess of that organization and seldom offers Mr. Murphy or his henchmen a suggestion. The "political science" springs from every walk of life. In most cases he has the word "failure" stamped on his countenance.

To any one spending a few days at party headquarters it is an easy matter to detect him. He has an individuality which readily admits of it. We know him by his hesitancy when he enters the room, his general appearance—"by the hungry look," as one sergeant-at-arms said rather acerbically in the last national campaign. Few are more than dignified in their own way. None in aggressive. For there is a general air at headquarters which takes the aggressiveness out of a stranger. It is only the big party leaders who ignore the sergeant-at-arms and clerk and walk at will through the rooms.

The unwelcome visitors are always after money or an office that will bring them money. Let the press speak of "a bar" at headquarters, and they swarm in like flies about a sugar bowl. They are convinced that the resources of a party are without limit. A thousand dollars or so in collecting for the campaign committee to pay out, they think. Little do they know that there have been periods in many campaigns in which for days headquarters has been obliged to run on credit, owing either to the failure of wealthy party men to keep their promises and contribute—an occurrence not at all uncommon, by the way—or because the platform and ticket had alienated their support, and the managers were forced to adopt the slow process of collecting the fund in small amounts from the rank and file, which is unaccustomed to contribute.

Few of these shabby schemes permeate reach the chairman to unbind their schemes or ask for money. It is the business of the sergeant-at-arms or his assistant to keep them off.

An old-timer who has done this for years is Billy Watson of the Democratic State Committee of New York. He can detect them on the instant. There is no exception, though, so far as this class is concerned. It is in the case of the man who has a letter to the chairman from some big member of the party, asking that he be given a personal hearing. The request is invariably granted, but such cases are so rare that the chairman is seldom disturbed by them. Tint these men, however, who go to headquarters with schemes do get some hearing given without saying. For the campaign managers are careful to attend to one, the theory being that every man has a vote, and sometimes counts a few others, and every vote counts. As a consequence, there are men at headquarters who spend part

Willing to sell it to the highest bidder

Let the press speak of "a bar!" at headquarters, and they swarm in like flies about a sugar-bowl

of their time listening to these schemes and passing on them. Much of this work is done by those who are placed on the campaign of evasive committees, not so much to clear in directing the contest as to conciliate an element of the party, or for geographical reasons. These men are often a source of annoyance to the real heads of the campaign in their inactivity on being informed and consulted as to what is going on. The schemer is, therefore, a good solution of the difficulty. He satisfies in many instances the dignity of these members of the campaign committee and prevents them from interfering in the more important work.

The schemers are of every nature and description. There is the man who has something to sell in the commercial line or advertising line, the man who controls the vote of a nationality or class, the man who seeks gross work, the wire-puller, the scandal-monger, the original sponsor of the candidate, who, in consequence, thinks he ought to be taken care of—that is, placed on the pay roll—and the man with schemes that do not square with political wisdom. They believe in their power and wisdom with a sincerity which is pathetic, even if he is able to present their plans with clearness, firmness, or conviction.

The man with something to sell in the commercial line or advertising is always first in the field. A reason, of course, is that headquarters must be fitted up with desks, chairs, and other furniture, and he knows that if the treasury is well filled at the start the force in charge will not be niggardly in spending money for its own personal comfort. He is, in many cases, a breezy individual, a man who seeks to convince people that his mission is of as great an import as the most vital political conference. In some instances he secures backing before he goes to headquarters—usually from some politician who is promised a rake-off if the deal "goes through." Following closely on his heels is the man who sells office supplies and filing systems that will help the chairman revolutionize all methods in conducting campaigns. The man with something to sell lingers around the various head quarters in 1904 for several weeks. He accompanied a delegation visiting Judge Parker in Kansas, but made himself so obnoxious there that it was a wonder he was not thrown from the boat, and he never appeared at headquarters after that.

When the grafters begin to arrive the most detested of all, but the one who must nevertheless be handled with care, is the man who claims to control the vote of a nationality or class. By this is meant he who says he has the negro,

German, Italian, Hebrew, or labor vote in his vest pocket, and gives from one party to the other, quite willing to sell it to the highest bidder. This grafter appears at headquarters in campaign after campaign. He is the only one of whom the party managers are, in a sense, afraid. For in many instances he does control a vote, though it is not as large as he claims, and this vote the party wants if the figures for obtaining it are not too high. The total vote in some cases may not be large enough to do more than sway a district; in others it may only be a few hundred. To take care of the man and prevent him from holding up the committee for too much money is the problem to be solved. In national and State campaigns the managers rely upon the local party leaders to inform them who's who and what's what among these grafters, and they only deal with those accredited, as it were. But in many instances these grafters are an army in themselves. Each controls his coterie of voters, hence a foreign vote, as an example, is sometimes obtained from half a dozen "leading citizens" of the nationality in question rather than from a single individual. It sometimes happens that these grafters sell to both parties. For instance, in the campaign of 1904, it is charged that a prominent labor leader sold the vote of his organization to both parties, the Democrats alone paying something like \$40,000 for it. Both parties found out this double dealing, but, of course, could do nothing.

The man who would conduct "the other side" and win the battle by some unique method is a variation of the type who haunts headquarters. This kind the real managers carefully avoid. He is never very prosperous in appearance, and probably is not in fact.

Still another type that entices the chairman to remain under cover is the man with a story to sell. He has already been called the scandal-monger. He is the most mysterious of individuals. He informs the chairman by card that his language is "confidential" and of the gravest import. The story he has of course concerns some episode either in the life of the opposition candidate or in the management of the canvass. In many cases what he has is of interest, but is seldom susceptible of verification. The managers, in consequence, seldom use his "information," fearing a boomerang.

There have been instances in which these unknowns have given "tips" which proved of great political import, hence headquarters is invariably willing to detail men to listen to them in the hope of making a "find."

The scandal-monger with a story to sell

Democratic Candidates for the Pres

HOW ABOUT

"THE OVERSHADOWING ISSUE AT THIS TIME IS 'EQUAL RIGHTS'

DRAWN BY

1908. President Thomas of the Lehigh occupied the chair, and John Mitchell led the forces of the miners.

Here in a closed room the champions of the great interests, seven on one side and seven on the other, all veterans in their respective causes, had come to the last grip on a question involving the work, the pay, the livelihood, and welfare of 147,000 men in the anthracite mines and their dependents. The contest had raged for months with varying fortune. In the no-man's-land of Pennsylvania there were ill-health and its customary concomitant—violence. Now, stripped of all redundancies and in-sensitivities, the thing had come into this narrow arena for final arbitration by the masters.

At the last, when the tension had reached its highest point, the labor leader, Bettry, turning upon President Thomas, put the whole contention into one question—a plain, fundamental, human question. It was a dramatic stroke. The rights of the stockholders to their dividends, the rights of the public to cheap coal, the injury to property, the reprisals—all the externals of a great labor struggle were put aside, and the whole matter concentrated in a single, simple question, man to man.

"I would ask the chairman," said Mr. Bettry, "whether in his opinion a man on \$1.25 per day is able to do justice to himself, let alone those who may depend on him for existence?"

This was the answer:

"I should not like to express an opinion on that, except that I have worked for that, and have worked in the mines for less than that myself. That is all I would care to say about that."

For reasons that will suggest themselves no reply to this was recorded.

To any inference from cases of this character the objection is always made that times have changed, and that the dollar went farther in the earlier day than it does now. Data upon that point will be taken up later on, but the statement that times have changed is exact. Times—and conditions also—have, indeed, undergone a tremendous change since the faraway strike, when E. B. Thomas lived on hard miner's fare and toiled long hours as a smut-faced breaker boy in and out of the muck of a Pennsylvania coal mine. He and his contemporaries came up by the hardest and by a narrow road. To-day there is a different system. The age of small enterprises and individual capital in industry has gone by. We have come upon the epoch of big things—big movements, big concepts, big companies, big capital, big creation, big working force, big output, big payrolls, and big opportunities.

This is not saying that the millennium has arrived. We all know well enough that it hasn't; that it will be many a long day before we shall all have everything we want, before work will do itself, or before the young lion of Labor will lie down in placid and perpetual peace with the fat lamb of Capital; but it will do no harm in this period of national neuritis either for the corporate employee or the American citizen in any other occupation to look for a little at the healthy and the encouraging side of things.

This country has just come through a fit of financial and industrial sickness; come through it as none save a fundamentally healthy organism could. The present diagnosis is not even yet evident, but learned doctors materially disagree; but one thing is certain, and that is that at the present convalescent stage the gentleman we want perched on our bedside is not the apostle

of hard luck. Ex-President Cleveland prescinded accurately when he said that what the country needed were rest and recuperation.

Just in order to get a right line on ourselves, we will do well to give over, at least until times get good enough again to stand it, a lot of the prevalent hysteria which, like the flame, grows by what it feeds on, and take a clear and candid account of stock, true and all of us can learn something. We shall probably be wise to correct our perspective, and, if we are inclined to be honest about it, find a heap to thank God for.

Nobody will hold it wise to rebuke rational and intelligent discontent, which from the day when Israel rose up against Sesostris has in all ages made for betterment; but it is none the less foolish to cry for the moon, or to forget, while our ears are haunted with the clamor of ceaseless and almost universal protest, that we are easily the most fortunate nation of people on earth, so far as possibility of personal advancement goes, that the field is open in this country for every man, no matter what his origin, to do and to be whatever he has the brains, the tact, the energy, and the will to be.

In Cincinnati, on March 22, a high-school boy submitted this question to Mr. Bryan:

"What chance has the poor boy, and how can brains win in a contest with money?"

This was the Great Commoner's reply:

"The poor boy has no chance unless he can arouse the people by using his tongue. The corporate powers are busy misleading the people, and are responsible for shutting out the poor boy."

Here is the authority on the other side. Mr. George W. Perkins holds a brief for these same corporate interests, if any one does, and should speak as one having authority. In an address to the students of Columbia University on "The Modern Corporation," he said, and it seems almost an intentional rejoinder to the remark just quoted:

"We have heard many warblings that because of the great corporations we have been robbing the coming generation of its opportunities. Nothing is more absurd. The larger the corporation, the more certain is the office boy ultimately to reach a foremost place if he is made of the right stuff, if he keeps everlastingly at it, and if he is determined to become master of each position he occupies."

These are the two points of view. I have underlined to suggest by random examples that it is not drawing the longbow at all to say that under present conditions any German immigrant boy has all possible chance given him to become a Carl Schurz, any steelworker a Newsham, a Cerry, or a Carnegie. The train hand whose swinging signal lanterns blink in the noise-laden dark of a railroad yard may develop into a Yeakum, any breaker boy plunging at his task in an anthracite mine may be president of the Lehigh.

The American firmament shows men in plenty in commanding positions in the field of commerce and industry whose first strides toward affluence and riches were made in adversity. Their life stories are the fairy tales of the New World and the latter day. The contrast between what they were and what they are is the most astonishing manifestation that history holds any account of.

"Of course," says James Frothingham, "intent and innocent on his own grievances," but when these men made their time the field

"We slept on the floor, and so did the Pigs"

wasn't so full as it is now. Competition wasn't so intense. The personalities were greater."

The same old excuse, then which incompetence, failure, and disappointment never devised a loser. Its exact contrary is the truth. Those men had in large measure to make their own opportunities. For the youth of today the corporations make them, or, to be more precise, the boundless needs which the corporation and its vast expansion have created. Of course there is competition, and of course it is intense. Where there is much to be got it is always so, and that is the furnace in which God for His own purposes tries out the race of man. On a volcano, mountain side where since the creation there has moved no living thing save the snake and the eagle, the lion, the ibex, and their kind, let some wandering prospector strike gold, and in a week you have the tunnel, the fever, the frenzy, and the strife of a turbulent city, and there, as in any arena of conflict, the accident and inevitable rule holds true that it's every man for himself and the weaker goes to the wall. And by and by there's one man on the top, and those on the bottom are howling the lack of opportunity.

Lack of opportunity! It is so true as to be the bane of corporation existence and one of the perils of capital that men cannot be got who are fitted to hold the high-priced places. The great railroad and industrial consolidations are securing the earth for men who can earn \$50,000 a year or more, and cannot find them. The crying need of this country under normal conditions is not for money; it is for men. Men of every sort, from the day laborer upward. And the big corporations are not only looking for men ready equipped for the work that is to be done; they are going into the highways and hedges in quest of the raw material from which such men can be fashioned. They are keeping tab on the graduating classes of colleges throughout the country, trying by every imaginable means to get track of likely fellows who have brains and sand and pugnacity, and who are willing to "go into the works," learn at the bottom, roll up their sleeves, and get into training for the job.

That isn't all. They are beginning across the ground and across haws, establishing industrial schools for the sons of their employees, spending money practically without stint to train the offspring of Salvatore and Ladislav and Fritz and Jaural and Petros, develop their inherent faculties, and mould them to the great needs of the time, the task, and the race. There's no boy trudging at the tail of a dump cart in a company yard who can't get the eye and the ear of a corporation official, and all the chances he wants, if he has wit and industry, and cares more about getting on in the world than he does for cigarettes and the hulloos heroes of the sporting page.

It is recognized in every way that the keystone and backbone of the whole stupendous industrial structure is the man who can work. In this declaration, at any rate, the labor advocate, however partisan or vituperated he may be, is as right as right, and the corporation head knows it better than anybody can tell him. He knows, what is more, the ultimate wisdom, any, the necessity, of conserving and improving the quality and efficiency of that man by all possible means. What immense improvement this understanding, coupled with governmental efforts, brought about at the urging of the labor forces, has wrought in the conditions of the workman the general public does not know. It is doubted if the workman of to-day realizes it himself. That this work, so far as employees are concerned, has in many cases been accomplished at the cost of squeezing the stockholder, who is the other end of the proposition, is, in the estimation of the controlling forces, of inferior importance. They are looking far ahead, and

The American Workman of To-day is no Brother to the Ox

they reckon, and wisely, that it will pay in the end, and pay largely.

They are bound to reckon this way. They themselves are, after all, only "hired men." This is the title which Chauncey M. Depew, in a burst of humor, adopted to designate himself when he was president of the New York Central Railroad, told it is a title that has taken on a large measure of dignity and importance since worldwide trade opportunity gave birth to the "trust." These men are the custodians, trustees, stewards of the stockholders' money. They will not claim that they are actuated by wholly altruistic motives, any more than they will admit they are heartless or inhuman. They are not studying the Sermon on the Mount. Their concern is with the balance sheet. If its showing is not satisfactory they show their pique, and there is no union to compel the company to take their lack.

No, what the corporation does for its workman, to render him better housed, better fed, better clothed, healthier, happier, more content and more intelligent, it does because he is made a better workman thereby, but the real reason that he gets the benefits, and the extent of these is progressive. To comprehend it fairly, account must be taken not alone of the dollars and cents that are paid to him on Saturday night or at the month's end, but of the manifold things which, in the language of the law creating the Bureau of Labor, "relate to his material, social, intellectual, and moral prosperity." There may also be considered, in this connection, what Hynd and Bratton Webb, in *Industrial Democracy*, call the "Policy of Minimums," in which they put forward as the remedy for all existent injustice, and which they would apply to the entire nation, instead of to trusts alone. The phrase "Policy of Minimums" sounds pedestrian. What it means is simply that to get all possible good out of working for somebody else there should be for the laborer a fixed minimum of wages, of leisure and recreation, of sanitation and of education—a measure of all these things which are vital to human well-being, less than which the employer, whether corporate or individual, shall not by any means force him to put up with.

When the facts as they are presented are viewed at these angles, it will perhaps be found that the line is never at hand for reconstructing, to a great extent, the too familiar picture of the "Man with the Hoe."

The "Man with the Hoe" is the colors in which we have known him is a vanishing figure. It will be the fault of the workman and the error if he ever comes back upon the stage. The typical American workman of the New Age is no brother to the ox. If he has remained so it is largely his own sin of omission. He seems rather, in his highest development, of which every year gives us more numerous examples in this country, to be brother to his boss, living in a comfortable home with the most approved sanitary equipment and drainage and a modicum of modern conveniences, that the company has built for him at cost and financed while he was paying for it. He is provided with a library and a gymnasium, a restaurant, and a club; a day school for his younger children and a night school for the older ones, who besides are earning money from the company—schools where, in addition to the regular academic curriculum, manual arts are taught to both girls and boys. He drinks milk from his own cow, which grazes on the company's pasture; he is fed from a cooperative store which pays him a dividend on everything he and his fellow workers eat; he listens to the music of Handel, Mozart, Beethoven, sung by a choral society in which high-priced teachers are employed to train his children's voices; he is entertained with lectures on a wide range of topics by men who are credited authorities thereon; he has membership in a benefit so-

city administered at the company's expense, which will pay him an allowance if he is sick, defray his funeral expenses if he dies, and then pension his wife. A skilled physician looks after his health at a maximum charge of fifty cents a month or three hundred; and for good measure he has some money in the company bank, and under the profit-sharing scheme has in sight in many corporations keeps in his safety-deposit box a little bunch of the company's stock, increasing it from year to year, which in certain cases pays him two per cent, of dividend for every one that a similar security pays his employer.

This, gentle reader, sounds Utopian, but it is accurate, and is only lacking in the cumulative detail, and, unfortunately, is not yet universal.

I have seen the teller of the Orient, on whom and on whose estate the centuries have left no mark of change other than a steady impoverishment, smothering his thin sheet of barley bread at noonday and washing it down with water that an American workman's dog would not drink. I have seen the denizens of the European ghettos, anemic, downtrodden to the last ditch, and the peas of Mexico groping slowly toward the light of industrial day. I have seen the white slave of the Canadian east-end, east, with his fifteen or sixteen children and a maximum gross income of fifty or sixty dollars a year, subsisting on bread and tea, and moiling at his perilsous trade from dawn till dawn, shackled with hopeless debt to the company store, his soul and body in bondage, and no hope of respite till the hungry, merciful sea swallows him up, which it is bound in the end to do.

If any one of these could by some accuracy be transported in

sleep, and wake some morning in a clean bed in the home of some employee of a progressive American industrial corporation, he would know for a certainty that he was either stricken with madness or that the kingdoms of the Lord had come, and he had been plucked down in the middle of the New Jerusalem.

Of course, it is not with such, for the present purpose, that we intend to compare the average American workman, but rather with his predecessors in this country and with his contemporaries in the most progressive industrial nations of Europe—his home, his home, his lost, his clothing, his advantages, and, above all, his opportunities, with theirs. When the details are set forth it will probably be cause for surprise to many to see what in this country and in this year of our Lord are the comparative conditions of the "hired man." And perhaps it will be something of a revelation to the workman himself.

Whatever these concrete instances may show of improvement in the condition of workmen in their best development under corporate employ, they will certainly demonstrate one thing, and that is, that the "chance"—the opportunity—is big in this country, that it has grown in proportion as our manufactures and traffic have grown, that the chance is made instead of the boy or the man having to make it for himself as he had forty years ago. And it will be plain, furthermore, that the corporation is no respecter of persons, that "influence" cannot hold a paying position, that fitness, and fitness alone, is the test by which the success or failure of every man and every boy—in the employ of a corporation, as in the mining camps of the Yukon—is determined, that by that test of fitness he must either rise or fall.

The Development of American Railroads

THE development of our railroad systems during the decade ending and embracing with the past year shows a record unparalleled in the industrial history of the country, and only approached, perhaps, by the English railroad achievements of the middle of the past century.

In 1907 there were 328,400 miles of railroad tracks in the United States, an increase of 54.7 over the number existing ten years previously. The number of passengers carried per mile was 29,405,000, an increase of 131.7 per cent. The freight tons carried per mile amounted to 242,000,000, as against 95,139,922 for the year 1907, a percentage increase of 154.8. The tonnage of locomotives increased from 1,855,286 to 3,672,900, almost exactly 100 per cent. The number of railroad employees increased from 823,476 to 1,675,000, or 103.1 per cent.

If this array of results is scrutinized from the standpoint of twenty years ago, instead of ten, the increase is equally remarkable. Next in importance to the movement of these millions of tons of freight stands out the fact that it has been accomplished with a continuously decreasing scale of receipts per ton mile, the result being that where the tonnage increased nearly fourfold, the freight revenue increased less than threefold.

While the increase in the number of cars and locomotives has been remarkable, as well as that in capitalization, gross earnings, and miles of line, the secret of the multiplication of the freight service chiefly lies in the weight and power of the locomotives, the greater capacity of the cars, and the improvement of the roads.

There are 26.78 miles of railroad line in the United States for every 10,000 inhabitants, as against 6.2 in Germany, 5.5 in the United Kingdom, 7.4 in France, and 13.5 in Sweden, whose railroad development exceeds that of any other country in Europe. In other words, our railroad system is nearly 200 per cent. in advance of the development shown by the most progressive of the old-world countries in this respect, while it is more than 500 per cent. in advance of that of all Europe, which has only 4.8 miles of line for every 10,000 of population.

Railway mileage in the United States has increased more rapidly than has the population. During the year 1907, the miles of track which were added to those in existence totaled 2074. The contrast between New Jersey, with its 300 miles per 100 square miles of territory, and Nevada, with its 1.31, indicates the wide difference in conditions under which railroads are operated.

Less than a year ago the shortage of freight cars was seriously hampering the operation of business throughout the length and breadth of this country, and in every State Legislature "reciprocal demurrage" laws were demanded—laws which would compel the railroad companies to supply all the cars which possibly could be utilized for the shipment of commodities and produce. During the past three years the locomotive and car builders, working at their full capacity, have supplied 19,945 locomotives, 11,175 passenger cars, and no fewer than 615,864 freight cars to the railroads of the United States and Canada. The locomotives built in 1907 were the most powerful that had as yet been made, and 72 per cent. of the freight cars built in that year were of steel or steel under-frame construction. During the years 1902-07, while the population of this country increased by 9 per cent., there was an increase of over 18 per cent. in passenger cars and passenger engines. The total cost of the new equipment to the railroads of the United States and Canada during the year 1907 is estimated at \$478,785,000, of which Canada's share amounted to about 10 per cent. of the whole amount.

This progressive railroad prosperity has been accompanied by an all-around increase in wages. In June, 1907 the wages of the 1,675,000 employees of the 328,400 railroad companies exceeded, for the year, \$1,673,000,000. While the number of employees increased 103 per cent. during the decade, their earnings increased over 133 per cent. In 1907 labor absorbed 41.93 per cent. of gross earnings. The average daily wage for all classes of workers and employees amounted to \$2.30. Aside from the executive force, engineers, with \$4.35, and conductors with \$4.00, obtained by far the highest wages paid. The average wage per diem of the British engine driver is only \$1.35, and the "guard" or conductor receives \$1.

It was in the fall of 1906 and the following winter that the great advance in the rate of railway wages first became general. Although the rate in pay was operative during less than six months out of the twelve, the average compensation per diem increased by 5 per cent. The payroll of 1906 thus amounted for over \$40,000,000 of the aggregate increase. During the past decade there has been an increase in the rate of pay of railway employees of over 20 per cent., the firemen, trackmen, and shippers obtaining the chief benefit, which amounted in many instances to 45 per cent. Engineers' wages rose 19 per cent., firemen's 25 per cent., and conductors' 30 per cent.

A Spirit in Prison*

A Novel

By Robert Hichens

AUTHOR OF "THE CALL OF THE BLOOD," "BARBARY SHEEP," ETC.

CHAPTER XXI

IF Marchesino had really been unwell, as he had told Hermione. The Panseri disposition, of which he had once spoken to Artico, was certainly not a calm one, and indeed was perhaps the most excitable member of an abundantly excitable family. Although eloquent, he was vehement. He knew not the meaning of the word patience, and had always been accustomed to get what he wanted exactly when he wanted it. Delay in the gratification of his desires, opposition to his demands, rendered him as indignant as if he were a spoiled child unable to understand the fixed position and function of the moon. And since the night of his vain singing along the shore to Nicola he had been ill with fever, brought on by jealousy and disappointment, brought on partly also by the busy workings of a heated imagination which painted his friend Emilio in colors of lanky black.

The Marchesino had not the faintest doubt that Artico was in love with Vere. He believed this not from any evidence of his eyes, for even now, in not very lurid moments, he could not recall any occasion on which he had seen Emilio paying court to the pretty English girl. But then he had only seen them together twice—on the night of his first visit to the island and on the night of the storm. It was the general conduct of his friend that convinced him, conduct in connection not with Vere, but with himself—apart from that one occasion when Emilio must have lain hidden with Vere among the densest of the Drocto of Virgil. He had been deceived by Emilio. He had thought of him as an intellectual, who was also a bon vivant and interested in Neapolitan life. But he had not thought of him as a libertine. Yet that was what he certainly was. The interview with Maria Fortunata in the alley beyond the Via Duomo had unquestionably been wickedness. He had no objection whatever to loose conduct, but he had a contempt for hypocrisy which was strong and genuine. He had trusted Emilio. Now he distrusted him, and was ready to see selfishness, deceit, and guile in all his undertakings.

Emilio had been trying to play with him. Emilio looked upon him as a boy who knew nothing of the world. The difference in their respective ages, so long ignored by him, now glared perpetually upon the Marchesino, even roused within him a certain condemnatory something that was almost akin to moral rebuke, a rare enough kind in Naples. He said to himself that Emilio was a wicked old man, "na vecchiaia lacerata." The delights of sin were the prerogative of youth. Abruptly his illuminating fan began, like a new comet, within the ken of the Marchesino. He turned towards beliefs of virtuous indulgence. As he lay upon his fevered pillow, drinking a tisane prepared by his anxious mamma, he understood the inner beauty of settling down—for the old; and white-haired age, still intent upon having its fling, appeared to him so truly pitiable and disgusting that he could almost have wept for Emilio. He said to himself to make himself more feverish such an act of enlightened friendship.

And this sense and appreciation of the true morality, ravishing in its utter novelty for the young barbarian, was cherished by the Marchesino until he began almost to swell with virtue, and to start on stilts to heaven, big with the unworldly wickedness that was for the young and most not modified with by any one over thirty—the age at which, till now, he had always proposed to himself to marry some rich girl and settle down to the rigid asceticism of Neapolitan wedded life.

And as the Marchesino had lain in bed tlingling with morality, so did he get up and loiter forth in the world, and even set sail upon the following day for the island. Morality was thick upon him, as upon that "cherished" Emilio, something else was thick. About mediocrity chivalry he knew precisely nothing. Yet, as the white wings of his pretty yacht caught the light breeze of morning, he felt like a most virtuous knight *sans peur et sans reproche*. He even felt like a steady-going person with a mission.

But he wished he thoroughly understood the English nation. Towards the English he felt friendly, as do most Italians; but he knew little of them, except that they were very rich, lived in a perpetual fog, and were "a little mad." But the question was how mad; in other words, how different from Neapolitans they were? The wisest he knew. It would make things easier for him in his ramblings against Maria Fortunata.

Till he met the ladies of the island he had never said a luncheon word to any English person. The Neapolitan aristocracy is a very conservative body, and by no means disposed to cosmopolitanism. To the Panseri Villa at Capodimonte came only

Hollins, except Emilio. The Marchesino had inquired of Emilio if his mother should call upon the Signora Delaroy, but Artico, knowing Hermione's hatred of social formalities, had hastened to say that it was not necessary, that it would even be a surprising departure from the English fashion of life, which ordained some knowledge of each other by the ladies of two families, or at least some formal introduction by a mutual woman friend, before an acquaintance could be properly cemented. Roberto the Marchesino had felt quite at ease with his new friends. But hitherto he had been, as it were, merely at play with them. The interchange of fever had changed his views and enlarged his consciousness. And Emilio was no longer at hand to be explanatory if desired.

The Marchesino wished very much that he thoroughly understood the inner workings of the minds of English ladies.

How mad were the English? How mad exactly, for instance, was the Signora Delaroy? And how mad exactly was the Signorina? It would be very valuable to know. He realized that his accurate knowledge of Neapolitan women, hitherto considered by him as amply sufficient to conduct him without a false step through all the intricacies of the world feminine, might not serve him perfectly with the ladies of the island. His fever had, indeed, struck a little blow on his self-confidence, and rendered him so feeble as to be almost thoughtful.

And then, what exactly did he want? To discredit Emilio utterly? That, of course, did not seem wrong, even to himself. And afterwards? There were two perpendicular lines above his eyebrows as the boat drew near to the island.

But when he came into the little drawing-room, where Hermione was waiting to receive him, he looked young and debonair, though still pale from his recent touch of illness.

Vere was acutely irritated by his coming. Her interview with Pippina had opened her eyes to many things, among others to a good deal that was latent in the Marchesino. She could never again believe, as any woman of his type, with the complete and masterful simplicity of ignorant childhood, that one innocently coquet by instinct, that can amuse by heredity from her, but that does not understand thoroughly either what it is doing or why it is doing it.

Verre was not in the mood for the Marchesino.

She had been working, and she had been dressing, and she wanted to have another talk with Monsieur Knille. Pretty, delicate, yet strong-fibred ambitions were stirring within her, and the curious passion to use life as a material, but not all of life that presented itself to her. With the desire to use that might be greedy arose the fastidious prerogative of rejection.

And that very morning, usually, Verre had rejected the Marchesino as something not interesting in life, something that was only lively like the very shallow stream. What a loss it would be leaving to entertain him, to listen to his eloquences, to avoid his plagues, to pretend to be at ease with him!

For Verre felt now that she would no longer be quite at ease in his company.

Then her Venetian blinds she saw his host come into the Poof's tranquility, and in a hasty manner prepared herself to go down and greet him.

"But madre can have him for a little first," she said to herself, as she looked into the glass to see that her hair was presentable. "Madre can have him in time. I didn't. I shall have nothing to say to him."

She had quite forgotten her eagerness on the night of the storm, when she heard the cry of the siren that betokened his approach. Again she looked in the glass and gave a put in her hair. And just as she was doing it she thought of that day after the battle, when Giuseppe had come to tell her that Monsieur Knille was waiting for her. She had run down then just as she was, and now—

"Mamma mia! Am I getting vain?" she said to herself.

And she turned from the glass and reluctantly went to meet her guest.

She had said to herself that it was a bore having the Marchesino to lunch, that he was uninteresting, frivolous, empty-headed. But directly she set eyes upon him, as he stood in the drawing-room in her mother's, she felt a change in him. What had happened to him? She could not tell. But she was conscious that he seemed much more definite, much more of a personage, than he had seemed to her before. Even his face looked different, though paler, stronger. She was aware of surprise.

The Marchesino, too, though much less instinctively observant than Vere, noted a change in her. She looked more developed, more grown up. And he said to himself:

"When I told Emilio she was a woman I was right."

Their meeting was rather grave and formal, even a little stiff.

* REPRODUCED FROM THE ORIGINAL IN THE

Copyright, 1912, by HARRIS & BUSHNELL

The Marchesino paid Vere two or three compliments, and she inquired perfunctorily after his health, and expressed regret for his slight illness.

"It was only a chill, signorina. It was nothing."

"Perhaps you caught it that night," Vere said.

"What night, signorina?"

Vere had been thinking of the night when he sang for her in vain. Suddenly remembering how she and Monsieur Emile had lain in bed and slipped surreptitiously home under cover of the darkness, she flushed and said:

"The night of the storm. You got wet, didn't you?"

"But that was long ago, signorina," he answered, looking steadily at her, with an expression that was searching and almost hard.

Had he guessed her inadvertence? She feared so, and felt rather guilty, and glad when Giulia came in to announce that lunch was ready.

Hermione, when they sat down, feeling a certain constraint, but not knowing what it sprang from, came in the rescue with an effort. She was really disinclined to talk, and was perpetually remembering that the presence of the Marchesino had prevented Emile from coming to spend a long day.

But she remembered also her guest's hospitality at Friso's, and her social instinct defied her natural reticence to be lively. She said to herself that she was rapidly developing into a foyer, and must rigorously combat the gracious tendency. By a short exertion of will power she drove herself into a different and conversational mood. The Marchesino politely responded. He was perfectly well possessed, but he was not light hearted. The unusual effort of being thoughtful had, perhaps, distressed or even enraged his brain. And the worst of it was that he was still thinking—for him quite personally.

However, they talked about recent events, they talked about Venice, they spoke of the delights of summer in the south, and of the advantages of living on an island.

"Does it not bore you, signorina, having the sea all round?" asked the Marchesino. "Do you not feel in a prison, and that you cannot escape?"

"We don't want to escape, we, madre!" said Vere, quickly, before Hermione could answer.

"I am very fond of the island, certainly," said Hermione. "Still, of course, we are rather isolated here."

She was thinking of what she had said to Arles—that perhaps her instinct to shut out the world was morbid, was bad for Vere. The girl at once caught the sound of hesitation in her mother's voice.

"Madre!" she exclaimed. "You don't mean to say that you are tired of our island life?"

"I do not say that. And you, Vere?"

"I love being here. I dread the thought of the autumn."

"By the end of October we shall have made our fitting, I suppose."

"You will come in to Naples for the winter?"

Hermione hesitated. Then she said:

"I almost think I shall take my daughter to Rome. What do you say, Vere?"

The girl's face had become grave, even almost troubled. "I can't look forward on this weather," she said. "I think it's almost wicked to. Oh, let us live in the moment, madre, and pretend it will be always summer, and that we shall always be living in our Casa del Mare!"

There was a sound of eager youth in her voice as she spoke, and her eyes sparkled again. The Marchesino looked at her with an admiration he did not try to conceal.

"You love the sea, signorina," he asked.

But Vere's enthusiasm quickly vanished, as if she feared that he might destroy its completeness by trying to share it.

"Oh yes," she said. "We all do here: madre, Giuseppe, Monsieur Emile, everybody."

It was the first time the name of Arles had been mentioned among them that day. The Marchesino's full red lips lightened over his large white teeth.

"I have not seen Signor Emile for some days," he said.

"Nor have we," said Vere, with a touch of childish discontent.

He looked at her closely.

Emilio—he knew all about Emilio. But the signorina? What were her feelings towards the "vecchio briccone"? He did not understand the situation, because he did not understand precisely the nature of the madness of the English. Had the ladies been Neapolitans, Emilio on Italian, he would have left on sure ground. But in England, so he had heard, there is a fantastic, cold, serious something called friendship that ran wild between unrelated man and woman.

"Don Emilio writes much," he said, with less than his usual alacrity. "When one goes to visit him he has always a pen in his hand."

He tried to speak of Emilio with complete detachment, but could not resist adding:

"When one is an old man one likes to sit, one cannot be forever running to and fro, one gets tired, I suppose."

There was marked satire in the accent with which he said the last words. And the strength of his shoulders was an almost audible.

"What ran I know that?"

"Monsieur Emile writes because he has a great brain, not because he has a tired body," said Vere, with sudden warmth.

Her mother was looking at her earnestly.

"Oh, signorina, I do not mean—But for a man to be always shut up," began the Marchesino. "It is not like."

"You don't understand, May chere. One can live in a little room with the door shut as one can never live."

Apparently she stopped. A flush ran over her face and down to her neck. Hermione turned away her eyes. But they had read Vere's secret. She knew what her child was doing in those hours of seclusion. And she remembered her own passionate attempts to stave off despair by work. She remembered her own failure.

"Poor little Vere!" That was her first thought. "But what is Emile doing?" That was the second. He had discouraged her. He had told her the truth. What was he telling Vere? A flood of bitter curiosity seemed to rise in her, drawing many things.

"What I like is life, signorina," said the Marchesino. "Driving, riding, swimming, sport, traveling, being with beautiful ladies—this is life."

"Yes, of course that is life," she said.

What was the good of trying to explain to him the inner life? He had no inclination.

Her youth made her very dramatic, very sweeping, in her secret mental assertions.

She labeled the Marchesino—Philistine, and peeped him into his drawer.

Lunch was over, and they got up.

"Are you afraid of the heat out-of-doors, Marchesino?" Hermione asked, "or shall we have trellis, and we shall be out of the sun."

"Signorina, I am delighted to go out." He got his straw hat, and they went into the tiny garden and sat down on basket-work chairs under a trellis, set in the shadow of some fig trees. Giulia brought them coffee, and the Marchesino lighted a cigarette.

He said to himself that he had never been in love before.

Vere wore a white dress. She had no hat on, but held rather rarely over her small, dark head a red parasol. It was evident that she was not afraid even of the midday sun. That new look in her face, soft, somewhat at the vision gazing at a world more fully, it more sadly, understood, fascinated him, sent the blood up to his head. There was a great change in her. Today she knew what before she had not known.

As he stared at Vere with moving eyes suddenly there came into his mind the question, "Who has taught her this? As if striving to his brain, to press violently against his temples, as if striving to force its way out. He put down his coffee cup, and the two per-

As he thanked her and took a cigarette, he tried to look into her eyes

peculiar lines appeared above his eyebrows, giving him an odd look, cruel and rather ostentatious.

"If Emilio—"

At that moment he longed to put a knife into his friend.

But he was not sure. He only suspected.

Hermione's role in this summer existence puzzled him exceedingly. The natural supposition in a Neapolitan world, of course, have been that Artista was her lover. But when the Marchese looked at Hermione's eyes he could not tell.

What did it all mean? He left furious at being puzzled, as if he were deliberately duped.

"Your cigarette has gone out, Marchese," said Hermione. "Have another."

The young man started.

"It's nothing."

"Vere, run so and get the Marchese a Khaki Targa."

The girl got up quickly.

"No, no! I cannot permit—I have another here."

He opened his case. It was empty.

Vere laughed.

"You see!"

She went off before he could say another word, and the Marchese was alone for a moment with Hermione.

"You are fortunate, signora, in having such a daughter," he said, with a sigh that was boyish.

"Yes," Hermione said.

That bitter curiosity was still with her, and her voice sounded listless, almost cold. The Marchese looked up. Ah! Was there something here that he could understand? Something really feminine? A creeping suspicion? He was on the spot once at once.

"And such a good friend as Don Emilio," he added. "You have known Emilio for a long time, signora?"

"Oh yes, for a very long time."

"He is a strange man," said the Marchese, with rather elaborate cautions.

"Do you think so? In what way?"

"He likes to know, but he does not like to be known."

There was a great deal of truth in the remark. His acuteness surprised Hermione, who thought the Marchese quick-witted, but very superficial.

"As he is a writer, I suppose he has to study people a good deal," she said, quietly.

"I do not think I can understand these great people. I think they are too grand for me."

"Oh, but Emilio likes you very much. He told me so."

"It is very good of him," said the Marchese, pulling at his mustache.

He was longing to warn Hermione against Emilio—to hint that Emilio was not to be trusted. He believed that Hermione must be very blind, very unfitted to look after a lovely daughter. But when he glanced at her face he did not quite know how to hint what was in his mind. And just then Vere came back and the opportunity was gone. She held out a box to the Marchese. As he thanked her and took a cigarette he tried to look into her eyes. But she would not let him. And when he struck his match she retraced once more to the house, carrying the box with her. Her movement was so swift and unexpected that Hermione had not time to speak before she was gone.

"But—"

"I should not smoke another, signora," said the Marchese, quickly.

"You are sure?"

"Quite."

"Still, Vere might have left the box. She is inhuman to-day."

Hermione spoke lightly.

"Oh, it is bad for cigarettes to lie in the sun. It ruins them."

"But you should have filled your case. You must do it before you go."

"Thank you."

His head was buzzing again. The touch of fever had really weakened him. He knew it now. Never gifted with much self-control, he felt today that, with a very slight incentive, he might lose his head. The new atmosphere which Vere diffused around her excited him strangely. He was certain that she was able to understand something of what he was feeling that on the night of the storm she would not have been able to understand. Again he thought of Emilio, and moved restlessly in his chair, looking sideways at Hermione, then dropping his eyes. Vere did not come back.

Hermione started herself to talk, but the task became really a difficult one, for the Marchese looked perpetually towards the house, and so far forgot himself as to show scarcely even a waning interest in anything his hostess said. As the minutes ran by a hot sensation of anger began to overcome him. A spot of red appeared on each cheek.

Suddenly he got up.

"Signora, you will want to make the siesta. I must not keep you longer."

"No, really; I have sitting out in the garden, and you will find the glare of the sun intolerable if you go so early."

"Oh, the sun there is always a horror. Indeed, I must not detain you. All our ladies sleep after the colazione until the bathing hour. Do not you?"

"Yes, we lie down. But to-day—"

"You must not break the habit. It is a necessity. My host will be ready, and I must thank you for a delightful entertainment."

His round eyes were fierce, but he commanded his voice.

"A rise—"

"I will come with you to the house if you really will not stay a little longer."

"Perhaps I may come again?" he said, quickly, with a sudden hardness, a fighting sound in his voice. "One evening in the cool. Or do I have you?"

"No; do come."

Hermione felt rather guilty, as if they had been inhospitable, she and Vere; though, indeed, only Vere was to fault.

"Come and dine one night, and I shall ask Don Emilio."

As she spoke she looked steadily at her guest.

"He was good enough to introduce us to each other, wasn't he?" she asked. "We must all have an evening together, as we did at Frinola's."

The Marchese bowed.

"With pleasure, signora."

They came into the house.

As they did so Pippina came down the stairs. When she saw them she murmured a respectful salutation and passed quickly by, averting her wounded cheek. Almost immediately behind her was Vere. The Marchese looked openly amazed for a moment, then even confused. He stared first at Hermione, then at Vere.

"I am sorry, madre; I was kept for a moment," the girl said. "Are you coming upstairs?"

The Marchese says he must go, Vere. He is determined not to deprive us of our siesta."

"One needs to sleep at his hour in the hot weather," said the Marchese.

The expression of wonder and confusion was still upon his face, and he spoke slowly.

"Goodbye, Marchese," Vere said, holding out her hand.

He took it and bowed over it and let it go. The girl turned and ran lightly upstairs.

Directly she was gone the Marchese said to Hermione:

"Pardon me, signora—I—"

He hesitated. His self-possession seemed to have deserted him for the moment. He looked at Hermione swiftly, searchingly, then dropped his eyes.

"What is it, Marchese?" she asked, wondering what was the matter with him.

He still hesitated. Evidently he was much disturbed. At last he said again:

"Pardon me, signora. I—as you know, I am Neapolitan. I have always lived in Naples."

"Yes, I know."

"I know Naples like my pocket."

He broke off.

Hermione waited for him to go on. She had no idea what was coming.

"Yes," she said at length, to help him.

"Excuse me, signora! But that girl—that girl who passed by just now—"

"My servant, Pippina."

He stared at her.

"Your servant, signora?"

"Yes."

"Do you know what she is, where she comes from? But no, it is impossible."

"I know all about Pippina, Marchese," Hermione replied, quietly.

"Truly? Ah?"

His large round eyes were still fixedly staring at her.

"Goodbye, signora!" he said. "Thank you for a very charming colazione. And I shall look forward with all my heart to the evening you have kindly suggested."

"I shall write directly I have arranged with Don Emilio."

"Thank you! Thank you! A rivederci, signora."

He cast upon her one more gravely staring look and was gone.

When he was outside and alone he threw up his hands and talked to himself for a moment, uttering many exclamations. In truth, he was utterly amazed. Maria Fortunata had spread abroad diligently the tale of her niece's beauty, and the Marchese, like the rest of the very young set of Naples, had known of and had misjudged her. He had read in the papers of the violence done to her, and had at once dismissed her from his mind with a murmured "Povera ragazza!"

She was no longer beautiful.

And now he discovered her living as a servant with the ladies of the island. Who could have put her there? He thought of Emilio's colloquy with Maria Fortunata. But the signora? A mother? What did it all mean? Even the madness of the English could scarcely be so pronounced as to make such a proceeding as this quite a commonplace manifestation of the national life and eccentricity. He could not believe—

He stepped into his boat. As the sailors rowed it out from the Port—the wind had gone down and the sails were useless—he looked earnestly up at the windows of the Casa del Mare, longing to pierce its secrets.

What was Emilio in that house? A lover, a friend, a bad genius? And the signora? What was she?

The Marchese was no believer in the virtue of women. But the lack of beauty in Hermione, and her age, rendered him very doubtful as to her role in the life on the island. Vere's gay singularity had jumped to the eyes. But now she, too, was becoming something of a mystery.

He traced it all to Emilio, and was hot with a curiosity that was ill-reconcilable with her position.

Should he go to see Emilio? He considered the question and reached not to do so. He would try to be patient until the night of the dance on the island. He would be forbearance, would play

(Continued on page 28.)

On the Bounding Deep

LITTLE, "Kiss me, mother, there you're right—there it's my watch on deck." Mrs. LAWSON, "Well, don't kiss you for keeping your watch on deck if it's then as badly as that."

Consuls for Canada

CANADA proposes to establish a consular service of her own, according to the speech made by Mr. Nelson, the finance minister, in introducing his last budget. At the present time Canada is represented by a service of some fourteen trade commissioners in her principal markets abroad. Six of these are stationed in the United Kingdom, one in Paris, another in Mexico, and the remainder in South Africa and Australasia. Owing to the Dominion's increasing trade the present service has become inadequate, and a thorough reorganization of the Department of Trade and Commerce is to take place.

The Return of the Sailing Ship

THE assertion has been made that within the past five years sailing vessels have come into vogue again, after having been practically bottled from the ocean for many years by the quicker and in many respects more easily controllable steamships. It is claimed that for long distances, when time of delivery is of no particular consequence, heavy cargoes can be transported much cheaper by sail than by steam. In confirmation of this statement, during the latter part of April two sailing vessels—four-masted bark, each of 2500 registered tons—left Rotterdam for San Francisco, each carrying a cargo of 2000 tons of American cotton and 500 tons of oil, stone and cement. The more luck left the same port in May, and two others are chartered for San Francisco, all for the purpose of carrying cotton, oil, stone, and cement.

What It Means to be a Railroad Man in England

THE Amalgamated Society of Railway Servants of England, has published the first complete report issued upon the conditions prevailing among its members. The report covers 250,280 railway servants, of whom 221,090 are employed in England and Wales, 28,000 in Scotland, and 8890 in Ireland.

The fact is shown that over 100,000 men are working at a wage of £1, or £1.50, a week, or under. More than one-half the total number employed receive less than £7.20, and only about eleven per cent. earn more than £7.20. The classes known as station masters, inspectors, clerks, laborers, and mechanics in shops are not included, they not being under the care of the Amalgamated Society. If the pay of these several classes of railway workers were considered it would bring the general average up to \$6.17. In this calculation the amount paid for all overtime is

taken into general wage account, which, under the rules governing railway labor, makes a considerable amount. This being deducted the general average of wage is about \$3.75 per week for all and every class of labor employed in railway operation and maintenance. The classes not included by the Amalgamated Society number approximately 320,000, and on the basis afforded by its report the wage division shows 134,000 employees receiving \$5 or less, 107,000 \$5 to \$7.50, and 78,000 \$7.50 and over.

The time schedules differ somewhat in the several countries. In England and Wales nearly all the grades of labor are rated at ten hours per day, except servants about passenger stations, who work twelve hours. The signaller (switchmen under the American classification) are on duty for an average of nine hours. In Scotland the general rule is twelve hours per day. In Ireland there seems to be about an equal division into the ten and twelve hour classes.

The guard is one who takes the place of the American conductor on American trains, but the system of train operation is widely different. An English railway guard stands peacefully in the same position as the chief brakeman on an American passenger train, with considerable added authority. He signals the train into action and does all that may or would be required of a conductor. He never collects tickets, for that is done either at the passing gate or at the end of the journey or by the proper official just before reaching the main station, if the passage is to any great extent. Guards peculiarly have a life position so long as they do their duty under the multiplicity of rules governing them, and as a class are the most careful and obliging with which the traveling public comes into contact. The wages paid to guards start at about \$5 a week, increasing at an average rate of twenty-four cents per week for each succeeding year; so that at the end of the twenty-first year the employee may receive as much as \$4.12 per week. The general weekly wage average of passenger servants for the United Kingdom in 1917 was \$6.50.

Engine drivers commence at \$9.24 per week. After one year, with no failure on the men's part, he is given an increase of five cents per week, and he may get this annual increase for seven years, until the maximum of \$11.68 is reached. This includes drivers on express trains of first class. The average weekly wage of this expert class of workers in the United Kingdom is \$9.08 for ten hours' work per day. There is an allowance of time and a quarter for overtime, but the half-day's labor for the men must be completed before any overtime is credited.

Firmen generally begin at not less than \$3 per week, with sixty hours' labor required per week, increasing to \$4.00. The highest maximum per week of this class is thirty-six cents after the first year. Much depends upon efficiency, as a record is kept of coal consumption and compared with miles run, in which both the driver and firmen figure. The weekly average for the United Kingdom is 80 per week of sixty hours; overtime is the week, after the sixty hours, is one and a quarter time; Sunday, time and a half.

Engine-braking is one of the few classes of railway labor in which boys are employed, although it is not by any means confined to boys. The minimum age at which boys are employed is fourteen years, with a weekly wage ranging between \$1.75 and \$3.

Signal fitters and ironmen, who belong to the class of machine-shop workers, generally work under specially favored conditions. The signal system on all the English railways is most thorough, and the receiver is watched one day and night. The average wage paid per week in the United Kingdom works out at \$5.15 to \$7.50 per week. The workmen have a fifty-six-hour week, with overtime at one-fourth extra for work days and half-time extra for Sundays.

Wages of brakemen are \$3.25 to \$5.75 per week for the first class, or those who have not been promoted from switchmen, and \$5.25 to \$7.47 for the second class; while the maximum pay is reached only after years of service by the advance of thirty-five cents per week per year. Ten hours per day, or sixty per week is the rule in England and Wales, and twelve in Scotland. The wages of switchmen per week, do not vary much from the brakemen class.

Signalmen are divided into first, second, and third classes. The weekly pay for sixty hours of the third class is from \$3.25 to \$3.75, the increase being by twenty-five cents per week per year; the second class receives \$4 for a forty-eight-hour week; the first and special class from \$6.25 to \$7 per week of forty-eight hours. Promotions are made from class to class as vacancies occur. In addition to wages, some of the roads pay a bonus to signalmen ranging from \$5 to \$55 or \$60, according to wages received. This bonus affects the whole class of signalmen, and is in the nature of a recognition of good service rendered.

Ticket-collectors receive an average weekly wage for the United Kingdom of \$3.30, and work sixty hours per week.

The average wage per week for railway porters in the United Kingdom is \$4.30, but there is a rising scale for time service, which never exceeds \$5.15 per week. This class is so largely benefited by "tips" and "Christmas boxes" that it is by far the most lucrative position obtainable.

An Automatic Money Assorter

A MACHINE has just been invented by Prajap for assorting coins. The inventor claims that it will assort metal coins which have been thrown together, regardless of their denominations, placing each denomination in a separate basket. The various coins are thrown indiscriminately into a funnel at the top of the machine, and from the funnel they slide downward, slanting on a spiral track. This track has a protecting edge or raised border containing slots corresponding to the various sizes of the coins. As the coins of various denominations slide downward on the track, through some peculiar mechanism of the machine they pass through the slots corresponding to their various sizes, entering their respective baskets at the bottom of the machine. It is said that several firms handling large amounts of coin daily have tried the machine with satisfactory results.

The same principle is not unknown in Florida and California, where it is adapted for mining purposes.

A HOME COMFORT

The merits of BROWN'S FRUIT-BRAND EVAPORATED MILK (CONDENSED) are convenience, economy, purity. Use it all year—winter, summer, in your hotel, restaurant, or home. It is a perfect food, suitable for infants, convalescents, and invalids. 1/2¢

A SPIRIT IN PRISON

(Continued from page 26.)

the fox, as Emilia surely had done. The peasant temper should find out that one member of the family could control it, when such control served his purpose.

He was as firm with a lust for action as he made his resolutions. Ver's coolness to him, even avoidance of him, had struck hammer-like blows upon his mind. He saw her now—yes, he saw her—coming down the stairs behind Peppina. Had they been together? Did they talk together, the cold, the prodigious signorina lady—was he called Vera now in his name—and the former decay of Maria Portunanza?

And then a horrible conception of Emilia's role in all this started into his mind, and for a moment he thought of Hermione as a blind innocent, like his subservient mother, of Ver as a prevaricator victim. Then the blood coursed through his veins like fire, and he felt as if he could no longer sit still in the boat.

"Avanti! avanti!" he cried to the sailors. "Dio mio! There is enough breeze to sail! Run up the sail! Madonna Santissima! We shall not be at Naples till it is night. Avanti! avanti!"

Then he lay back, crossed his arms behind his head, and, with an effort, closed his eyes.

He was determined to be calm, not to let himself go. He put his fingers on his pulse.

"That scared fever! I believe it is coming back," he said to himself.

He wondered how soon the signora would arrange that, dinner on the island. He did not feel as if he could wait long without seeing Ver again. But would it ever be possible to see her alone? Emilia was her alone. His white hairs brought him privileges. He might take her out upon the sea.

The Marchese, after he had his fingers on his pulse. Surely it was fluttering very strangely. Like many young Italians, he was a mixture of fearlessness and weakness, of boldness and child-likeness.

"I must go to mamma! I must have medicine—the doctor," he thought, anxiously. "There is something wrong with me. Perhaps I have been looked at by the evil eye."

And down he went to the bottom of a gulf of depression.

CHAPTER XXII

Hermione was very thankful that the Marchese had gone. She felt that the lark had been a failure and was sorry. But she had done her best. Ver and the young man himself had frustrated her. It was a bore having to entertain any one in the hot weather. As she went upstairs she said to herself that her guest's odds had been the final phase of an unfortunate morning. Emilia had known something of Peppina, and had been shocked to find the girl in the house. Emilia had told her—Hermione—that she was an impulsive. Had she acted foolishly in taking Peppina? She had been governed in the matter by her heart, in which dwelt gay and a passion for justice. Surely the sense of example and fair-deal had been enough to lead her astray. And yet, since Peppina had been on the island the peace of the life there had been lessened. Emilia had become a little different. Ver too. And even Gaspare—was there not some change in him?

She thought of Glia's assertion that the disguised girl had the evil eye.

She had laughed at the idea, and had spoken very seriously to Glia, telling her that she was not to communicate her foolish suspicion to the other servants. But certainly the joy of their life in this House of the Sea was not what it had been. And even Ver had had forebodings with which Peppina had been connected. Perhaps the air of Italy, this clear, this radiant atmosphere which seemed created to be the environment of happiness, contained some subtle poison that was working in them all, turning them from cool reason.

She thought of Emilia, sitting up before her his big frame, his powerful face with the steady eyes. And a wave of depression went over her, as she understood how very much she had relied on him since the death of Maurice. Without him she would indeed have been a derelict.

Again that bitter flood of curiosity welled up in her. She wondered where Ver was, but she did not go to the girl's room. Instead, she went to her own sitting-room. Yesterday she had been restless. She had felt drawn. To-day she felt even worse. But today she knew what yesterday she had not known—Ver's solitary occupation. Why had not Ver told her, confided in her? It was a very simple matter. The only reason why it now assumed an importance to her was because it had been so carefully concealed. Why had not Ver told her all about it, as she told her other little matters of their island life, freely, without even a thought of hesitation?

She sought the reason of this departure which was painful her. But at first she did not find it.

Perhaps Ver was hiding her a surprise. For a moment her heart grew lighter. Ver might be preparing something to please or astonish her mother, and Emilia might be in the secret, might be assisting in some way. But not Ver's mysterious occupation had been followed long. And then Emilia had not always known what it was. He had only known lately.

Those long reviews of Ver's upon the sea, when he lay in the little boat in the shadow cast by the cliffs over the Saint's Pool—they were the prelude to work; imaginative, creative, perhaps.

And Ver was not overladen.

Hermione smiled to herself rather bitterly, thinking of the ignorance, of the inviolable duty of youth. The child, no doubt, had dreams of future. What clever, what imaginative and en-

gine child has not such dreams at some period or other? How absurd we all are, thinking to climb to the stars almost as soon as we can see them!

And then the smile died away from Hermione's lips, as the great tenderness of the mother within her was moved by the thought of the disappointments that come with greater knowledge of life. Ver would suffer as when she learned the truth, when she knew the meaning of failure.

Quite simply and naturally Hermione was including her child inevitably within the circle of her own disaster.

If Emilia knew, why did he not tell Ver what he had told her mother?

But Emilia had surely shown much greater interest in Ver just lately than ever before?

Was Emilia helping Ver in what she was doing? But if he was then he must believe in Ver's capacity to do something that was worth doing.

Hermione knew the almost terrible sincerity of Ariola in the things of the intellect, his clear, unswerving judgment, his ruthless truthfulness. Nothing would ever turn him from that. Nothing, unless he was.

Her face became suddenly ashen, then pale. A monstrous idea had sprung up in her mind, an idea so monstrous that she strove to thrust it away violently, without even contemplating it. Why had Ver not told her? There must be some good and sufficient reason. Verkenally—it was impossible that Emilia could mean—she thought it. Why had everything else in her child been revealed to her, only this one thing been hidden from her?

She searched the past, Ver and herself in that past. And now, despite her protests, her full intelligence was roused up and at work. And presently she remembered that Emilia and Ver shared the knowledge of her own desire to create, and her utter failure to succeed in creation. Emilia knew the whole unkind truth of that. Ver did not. But Ver knew something. Could that mental knowledge be the reason of this unusual secrecy?

As woman often do, Hermione had leaped into the very core of the heart of the truth, had traced out the word, guided by some strange instinct never alive in man. But as women very seldom do, she shrank away from her place she had gained. Instead of triumphing she was afraid. She remembered how often her imagination had betrayed her, how it had created phantoms, had ruined her by her lagging hours. Again and again she had said to herself, "I will beware of it." Now she seemed to be playing her false once more, of running wild. Sharply she pulled herself up. She was assuming things. That was her great fault, to assume that things were that which were not.

How often Emilia had told her not to trust her imagination! She would heed his now. She knew nothing. She did not even know for certain that Ver's flush, Ver's abrupt hesitation at lunch, were a betrayal of the child's secret.

But that she would find out. Again the fervor curiosity besieged and took possession of her. She was a mother. A mother had rights. Surely she had a right to know what another knew of her child.

"I will ask Ver," she said to herself.

Yet before she had said to herself that she would do that, and she had not done it. She had felt that to do it would be a humiliation. But now she was resolved to do it, for she knew more of her own condition and was more afraid of herself. She began to feel like one who has undergone a prolonged strain of work, who believes that it has not been too great and has been capably supported, and who suddenly is aware of a yielding, of a downward and outward movement, like a wide and spreading disintegration, in which brain, nerves, the whole body, are involved.

Yet what had been the strain that she had been supporting, and that she now suddenly began to feel too much? The strain of a loss. Time should have eased it. But had time eased it, or only lengthened the period during which she had been forced to carry her load? People ought to get accustomed to things. She knew that it is supposed by many that the human body, the human mind, the human heart can be accustomed—by which is apparently meant can cause passively and instinctively to strive to forget—can get accustomed to anything. Well, she could not. Never could she get accustomed to the loss of love, of man's love. The whole world might proclaim his presence. For her they had no truth. For her—and for her alone—there was no reality.

And now suddenly she felt that for years she had been struggling, and that the struggle told upon her far more than she had ever suspected. Nothing must be added to her burden or she would sink down. The first would cover her, she would be as nothing—or she could be as something terrible, nameless.

She must ask Ver. Do what she had said to herself that she would not do. Unless she had the complete confidence of her child she could not continue to do without the clarifying love she had lost. She knew herself a negligible something amidst all this. She had been supported by blessed human creatures, by Ver, Emilia, Gaspare. How heavily she must still lean if she were to continue on her way. And a force, an almost avenging something, desperate and the more arbitrary, more words. Ver—she thought—"I will love the little that I have; I will—I will."

"The little?" Had she said that? It was wicked of her to say that. But she had had the wonderful thing. She had held for a brief time the magic of the world within the hollow of her hands, within the shadow of her heart. And the others? Children who from their parents' lives into the arms of another love whose real means more to them than the voices of those who made them live. Friends drift away, scarcely knowing why, divided from each other

(Continued on page 29.)

(Continued from page 28.)

by the innumerable channels that branch from the main stream of existence. Even a faithful servant cannot be more than a friend.

There is one thing that is great, whose greatness makes the smallness of all the other things. And so Hermione said, "the little that I have," and there was truth in it. And there was an vital truth in the fact of her whole nature recognizing that little's enormous value to her. Not for a moment did she underestimate her possession. Indeed, she had to fight against the tendency to exaggeration. Her intellect said to her that, in being so deeply moved by such a thing as the concealment from her by Vere of something innocent of which Knile knew, she was making a water drop into an ocean. Her intellect said that. But her heart said no.

And the voice of her intellect sank away like the faintest echo that ever raised its spectral imitation of a reality. And the voice of her heart rang out till it filled her world.

And so the argument was over.

She thought she heard a step below, and looked out of the window into the sunshine.

Gaspare was there. It was his hour of repose, and he was smoking a cigarette. He was dressed in white linen, without a coat, and had a white linen hat on his head. He stood near the house, apparently looking out to sea. And his pose was meditative. Hermione watched him. The sight of him reminded her of another question she wished to ask.

Gaspare had one hand in the pocket of his white trousers. With the other he held the cigarette. Hermione saw the wreath of pale smoke curling up and evaporating in the shining, twinkling air, which seemed full of joyous, dancing atoms. But presently his hand forgot to do its work. The cigarette, only half smoked, went out, and he stood there as if plunged in profound thought. Hermione wondered what he was thinking about.

"Gaspare!"

She said it softly. Evidently he did not hear.

"Gaspare! Gaspare!"

Each time she spoke a little louder, but still he took no notice. She leaned further out and called:

"Gaspare!"

This time he heard and started violently, dropped the cigarette, then, without looking up, bent down slowly, recovered it, and turned round.

"Signora!"

The sun shone full on his upturned face, showing to Hermione the dogged look which sometimes came to it when anything startled him.

"I made you jump."

"No, signora."

"But I did. What were you thinking about?"

"Nothing, signora. Why are you not asleep?"

He spoke almost as if she injured him by being awake.

"I couldn't sleep to-day. What are you going to do this afternoon?"

"I don't know, signora. Do you wish me to do anything for you?"

"Well—"

She had a wish to clear things up, to force her life, the lives of those few she cared for, out of mystery into a clear light. She had a desire to chastise thought by strong, business action.

"I rather want to send a note to Don Knile."

"No, signora."

His voice did not sound pleased.

"It is too hot to rest all the way to Naples. Couldn't you go to the village and take the train to the hotel—if I write the note?"

"If you like, signora."

"He would like to see her better to row as far as Mergellina, and take a train or carriage from there?"

"I can do that, signora."

He sounded a little more cheerful.

"I think I'll write the note to-night, then. And you might take it sometimes whenever you like. You might come and fetch it in five minutes."

"Very well, signora."

He moved away and she went to her writing-table. She sat down, and slowly, with a good deal of hesitation and thought, she wrote part of a letter asking Knile to come to dine whenever he liked at the island. And now came the difficulty. She knew Knile did not want to meet the Marchesino there. Yet she was going to ask them to meet each other. She had told the Marchesino so. Should she tell Knile? Perhaps if she did he would refuse to come. But she could never lay even the smallest trap for a friend. So she wrote on, asking Knile to let her know the night he would come, as she had promised to invite the Marchesino to meet him.

"Be a good friend and do this for me," she ended, "even if it hurts you." The Marchesino laughed here alone with me to-day, and it was a fence. I think we were very indisputable, and I want to wipe away the recollection of our dulness from his mind. Gaspare will bring me your answer."

At the bottom she wrote "Hermione." But just as she was going to seal the letter in its envelope she took it out and added "Delaney" to her Christian name.

"Hermione Delaney." She looked at the words for a long time before she rang the bell for Gaspare.

When she gave him the letter, "Are you going by Mergellina?" she asked.

"No, signora."

He stood beside her for a moment, then, as she said nothing more, turned to go out.

"Gaspare, wait one minute," she said, quickly.

"No, signora."

"I want to ask you last night, but—all, we spoke of other things, and it was so late. Have you ever noticed anything about that boy Ruffo, anything at all, that surprised you?"

"Surprised me, signora?"

"Surprised you, or reminded you of anything?"

"I don't know what you mean, signora."

Gaspare's voice was hard and cold. He looked steadily at Hermione, as a man of strong character sometimes looks when he wishes to turn his eyes away from the glance of another, but will not, however of his own accord.

Hermione hesitated to go on, but something drove her to be more explicit.

"Have you ever noticed in Ruffo a likeness to—to your father?" she said, slowly.

"My father?"

Gaspare's great eyes dropped into hers, and he stood looking on the floor. She saw a deep flush cover his brown skin.

"I am sure you have noticed it, Gaspare," she said. "I can see you have. Why did you not tell me?"

At that moment she felt angry with herself, and almost angry with him. Had he noticed this strange, this subtle resemblance between the father boy and the dead man at once, long before she had? Had he been wiser to see such a thing than she?

"What do you mean, signora? What are you talking about?" He looked ugly.

"How can a father boy, a nothing from Mergellina, look like my father?"

Now he lifted his eyes, and they were fierce—as she thought.

"Signora, how can you say such a thing?"

"Gaspare?" she exclaimed, astonished at his sudden vehemence.

"Signora—well! But—there will never be another like my father."

He opened the door and went quickly out of the room, and when the door shut it was as if an iron door shut upon a furnace.

A REMINDER OF THE PAST

The placid and uneventful Heaven where dwell the Ghosts of the old Fifth Avenue 'Buses

SPRING DAYS IN MOSCOW

Recent Floods in the Russian City have enabled her Citizens to show their superiority to such Conditions

The Locust Story Outlived

The king commanded the court story-teller to unfold a narrative without an end. "Once on a time there was a huge building filled with corn," began the story-teller. "An enormous swarm of locusts swooped down on this tremendous edifice and—"

"Stop!" commanded the king. "That tale is a bearded chestnut. I want something new; but it must be a story without an end."

The story-teller departed. Several hours later he returned and was admitted to the royal presence.

"Oh, most mighty monarch," he began, "I have found one who can regale you with a story which is devoid of conclusion."

"Produce!" cried the king.

The story-teller passed from the throne room, but soon returned. He was now accompanied by a woman.

"Your highness, this lady will tell a story which has no end," announced the story-teller.

Then the woman told the king everything she was going to purchase when her husband had his salary paid.

The king was still listening.

Insectile

"THE PYRAMIDS are pretty thoroughly covered with hemipteraphs."

"Ugh! These nasty things I hate the vermin!"

The Burnt-cork Circle

"MISTAR MIDDLEMAN, ah has ah riddle." "Mr. Bones, we shall be delighted to have you propound it."

"Yessah; but hit ain't nothin' lah dat. Ah jests desires to ax ya' what can de difference between ah storekeeper whose business is improv'n' an' a man who selects feathers for sofa pillows?"

"That's a pretty hard one to crack, Mr. Bones. Now what is the difference between a storekeeper whose business is improving and a man who selects feathers for sofa pillows?"

"The storekeeper's business is pickin' up, no de other man's business is pickin' down."

"Mr. T. N. Orr will sing the pathetic ballad, 'He Married Himself to a Marvel Wave, and Now He's all at Sea.'"

The Worm

TEACHER (*in elms*). "Did you know, children, that the beautiful silk dresses worn by ladies come from little worms?"

BESSIE (*caustically*). "Yes. That's our paper."

Complete Ignorance

A CERTAIN Sunday-school class in Philadelphia reminds for the most part of youngsters who live in the poorer districts of the city. One Sunday the teacher told the class about Cain and Abel, and the following week she turned to Jinnie, a diminutive lad who, however, had not been present the previous session.

"Jinnie," she said, "I want you to tell me who killed Abel."

"Ain't no use askin' me, teacher," replied Jinnie. "I didn't even know he was dead."

Roumania's Newspapers

THERE are 293 different publications in Roumania, comprising 30 dailies, 125 weeklies, 104 monthlies, and 57 which appear irregularly. Naturally Bucharest, the capital, leads, with 160 publications to its credit—23 dailies, 31 weeklies, 50 monthlies, and 56 appearing at intervals. After Bucharest come Iasi, with 29 publications, Braila, with 15, and Jassy, with 12.

The total number of publications handled by the Roumanian post office in 1906 was 151,218,322. The one paper sent out during the year 30,000,000 copies; no other daily paper sent out more than 6,000,000.

The New French Income Tax

By M. L. GIRAULT

THE new system of taxation which seems likely to be established in France might be called a plan to destroy marriage and labor and to promote prostitution.

No thinking man wishes it, and the deputies want it as more than anything else; but the Income Tax bill, having been placed before most of them for the first condition for their election, they have had to vote it.

Of the taxes inflicted on us by the old system some were funny, some were unjust, as, for instance, taxing the whole of an individual's capital without first deducting from it the debts of the estate; some even were pernicious, like our tax on doors and windows, putting a premium on things as necessary to existence as air and light. But as the property owner was taxed only on the appearance of property, he was thereby encouraged to thrift and economy, which are the two vital characteristics of the French nation.

Now he is to be taxed on the property itself, which is perfectly fair; but the amount imposed is to be progressive—that is to say, the more he owns, the higher his percentage of taxation is to be. For example, he may be obliged to give five per cent. on an income of 10,000 francs, ten per cent. on 20,000 francs, and fifteen per cent. on 30,000 francs per annum. Under a certain amount, probably under 2,000 francs income, there will be no taxation at all, but above 15,000 francs the charge is to be tremendous.

Of course this plan appeals to the masses. Their argument in favor of it is simple. They should have a income with plenty of money give more to the state than a laborer? they ask. A few thousand francs more or less do not mean anything to him. He will not miss them, whereas every penny counts in the budget of the poor.

It is true enough, and we cannot wonder at the uneducated being deceived by an idea which has fascinated such men as J. B. Say and Montesquieu.

Yet, at a glance, it is easy to see that this theory of a progressive income tax could justify itself only on the condition that the benefits derived by the people from the state increased according to their percentage of taxation. Now in reality the reverse happens. It does not cost any more to the government to protect one man than to protect another man, to look after large incomes than after small ones; and the millionaire does not wear out the state more any more than the pauper. On the other hand, many public services, such as public instruction, savings-banks, public charities, are mainly and in some instances exclusively organized to serve the interests of the impoverished.

It is chimerical for the people to think they are going to escape taxation. As soon as the law is applied, they are going to suffer from what is known to economists as "phenomenon of repression," and they will find themselves taxed indirectly very heavily when they are no longer taxed directly. The landless will raise his rent, the baker the price of his bread, the grower that of his groceries. This is so certain to happen that the Chamber of Deputies, while still planning the Income Tax bill, has already considered the necessity of raising the salary of all government employees in proportion of a sure increase in the cost of living.

Those whom the law intends to reach, particularly the capitalists, are going to evade the difficulty by diverting their money outside of France. Since the first bill was voted in March, 7,000,000 francs have disappeared from the Paris Bourse, causing serious injury to trade and industry.

The opportunity of the capitalist to cast off most of his duty as a citizen throws the whole of the burden on the hard-working poor, in a word, upon the most deserving part of the nation, and it falls as a crushing blow. Men of this class are not well off at best, and it is hard to figure out how they can manage to face any new financial responsibilities.

In the present condition of affairs, even when they have had all those privileges of education without which there is no possibility for them, they can afford neither a wife nor a child, while under thirty-five years of age, for they do not earn enough, and the cost of living is too high. If they do succeed in marrying at an earlier age, it is because they have had the luck to meet a "good enough" young girl with an appropriate dot. Then the insolent supports himself, the dot provides for the wife and the two rubs noses, but let the man desire the luxury of children, of befriending them up decently, and he must wait till middle age approaches.

However, despite the evil of these conditions that deprive a man of his brightness in love and enjoy his youth, there is hope for him in the course of time, if he is patient and painstaking. He may be rewarded for his conscientiousness and his efforts. As he is taxed only for his expenditures, the little luxuries of which he deprives himself go toward assuring the future of his family, and the harder he works, the more simply he lives, the more he benefits his household.

Now the reverse is going to happen, with the institution of the Income Tax. A father will no longer reap the result of his own efforts when, spurred to more activities by the birth of a new child, he succeeds in increasing his income. The state, regardless of the man's new needs, will tax his earnings more heavily. So, when he spends his strength, vitality, takes no holidays and becomes prematurely old in toiling, the Frenchman is to do it all for his country and not for his family at all. And yet he is required by the state to have children—he will be taxed, of course, even without them—so that his children in their turn may work for the sake of the Motherland. A rather dreary outlook!

And the encouragement to marry is no greater than the encouragement to bring children up. Two separate incomes being taxed less than two joint incomes, a man and a woman will find it to their great pecuniary advantage to live together outside of matrimonial ties, and to keep separate accounts instead of joining incomes in marriage and so quinqueting their debt to the nation.

In short, the ideal of a Frenchman will now be to have a minimum of needs and to supply them with a minimum of effort. He, anxious for the future, he tries to put money aside; instead of saving a little savings and allowing interest to accrue, he will hide his cash from the tax collector and tuck it away in the old stocking. Consequently, that economy which has pulled France through the worst crises in her history is on the point of becoming a national danger.

Diffidence of all sorts threaten the application of the Income Tax bill, too. How is the government going to find out exactly how much a man is worth, without reviving a tribunal of inquisition to keep track of every stock, bond, and deposit?

But the French people will resent the interference of the state with their private affairs. They are as a race headstrong, and it is to their characteristic quick temper that M. Aymond alluded when he remarked in the Chamber of Deputies, concerning the nation's attitude toward the new bill, "They may be willing to pay . . . but they will not let their pockets be searched!" And if they are searched there will be trouble.

Mark Twain, His Books, and the Booksellers

A speech delivered at the eighth annual banquet of the American Booksellers' Association Mark Twain quoted some remarkable statistics that show the popularity of his writings. Included in the account are practically all the booksellers of America. The banquet was held at the rooms of the Aldine Association, No. 111 Fifth Avenue, Wednesday evening, May 26. Among other things Mark Twain said:

"This annual gathering of book-sellers from all over America comes together ostensibly to eat and drink, but really to discuss business; therefore I am required to talk shop. I am required to furnish a statement of the indebtedness under which I lie to you gentlemen for your help in enabling me to earn my living. For something over forty years I have acquired my bread by peddling, beginning with *Uncle Sam's* thread, followed at intervals of a year or so by *Roughing It*, *Tom Sawyer*, *Clarendon*, and so on. For thirty six years my books were sold by subscription. You are not indebted in those years, but only in the four which have since followed. The books passed into the hands of all present publishers at the beginning of 1904, and you then become the providers of my diet. I think I may say, without flatterer, you that you have done exceedingly well by me. Exceedingly well is not too strong a phrase, since the official statistics show that in four years you have sold more than the value of my seventeen books as my contract with my publishers bound you and them to sell in five years. To your sorrow you are aware that frequently, much too frequently, when a book goes to be five or ten years old its annual

sale shrinks to two or three hundred copies, and after an added ten or twenty years ceases to sell. But you sell thousands of my non-booked old books every year—the youngest of them being books that came from fifteen or twenty years ago, and the oldest reaching back to thirty-five and forty.

By the terms of my contract my publishers had to account to me for 20,000 volumes per year for five years, and pay me for them whether they sold them or not. It is at this point that you gentlemen come in. It was your business to get the 200,000 volumes upon the public in five years if you possibly could. Have you succeeded? Yes, you have—and more. For in four years, with a year still to spare, you have sold the 200,000 volumes, and 240,000 besides.

My sales have increased each year. In the first year you sold 100,328; in the second year, 104,851; in the third, 135,973; in the fourth year—which was last year—you sold 161,000. The aggregate for the four years is 500,000 volumes, lacking 11,000.

Of the oldest book, the *Facsimile*, 16,000; of the forty years old, you sold upwards of 40,000 copies in the four years; of *Roughing It*—now thirty-eight years old, I think—you sold 40,234; of *Tom Sawyer*, 41,000; and so on.

And there is one thing that is particularly gratifying to me: The *Penguin*, *Revolutions of Earth* and *Life*—a serious book, I wrote it for you and never expected it to sell, but you have pleasantly disappointed me in that matter. In your hands its sale has increased each year. In 1904 you sold 17,266 copies; in 1905, 24,457; in 1906, 30,811; and last year, 65,747.

Phyllis

(A Foolish Fantasy)

PHYLLIS stood like a sweet Naiad,
Down by the stream, in vibrant red,
Holding a slender bamboo rod.

Her shriek then rent the ambient air—
A fatigued bug had left its lair.
To chase the rat tucked in her hair.
E. P. FITZGER.

Leather Shoes for Horses

In some districts of Australia horses are shod with leather instead of iron. This plan is employed only in regions where the ground is permanently covered with grass or fine sand, and gives the foot better support. In a country such as Australia, where a horseman may experience great difficulty at a critical moment in finding a horse-shoe, such an innovation is a real novelty. With extra shoes, whose weight is a trifle, and which can be fitted without trouble, it is practicable to travel without fear of the horse losing its shoe and being injured. Though the leather shoe is more expensive than the iron shoe, the higher price is repaid by the superior advantages.

Compromise

(FROM AN ANECDOTE). "Let me have a copy of Antony and Cleopatra," I said. "Yes, sir, the dollar, please," I replied. "Dear me, I've only got fifty cents. Just give me Antony!"

Willing to Oblige

AN Englishman was recently invited by a New-Yorker to accompany him on a hunting trip on Long Island.

"Large or small game?" facetiously asked the Briton, who has hunted in every quarter of the globe.

"You don't expect to find lions and tigers on Long Island, do you?" queried the New Yorker.

"Hardly," responded the Briton, with a laugh. "but I like a spice of danger in my hunting."

"If that's the case," answered the other, with a grin. "I'm your man, all right. The last time I went out I shot my brother-in-law in the leg!"

A Chinese Normal School

The new Chinese board of education proposes to establish a Shih-tan Hsing-tang, or civil normal college, in Peking, for training teachers for service in the various civil schools and colleges throughout the empire. In addition to Chinese classics, English, French, German, Russian, and Japanese will be taught in the proposed college, under the instruction of experienced teachers. The college will be established in the Chinese city as the course of the present year, and the annual expenditure is estimated to be about 100,000 taels (about \$7,000).

Obeying Mother

A MAN had just arrived at a Massachusetts summer resort. In the afternoon he was sitting on the veranda when a handsome young woman and her six-year-old son came out. The little fellow at once made friends with the latest arrival.

"What is your name?" he asked. Then, when this information had been given, he asked, "Are you married?"

"I am not married," responded the man, with a smile.

At this the child paused a moment, and, turning to his mother, said:

"What else was it, mamma, you wanted me to ask him?"

Don't Go On Your Vacation

Until You Have Read The Great Vacation Number of "Recreation."

JUNE "RECREATION" WILL BE A GREAT BIG SPECIAL NUMBER OF THIS
SPLENDID MAGAZINE, FULL OF LARGE AND ATTRACTIVE ILLUSTRATIONS
AND PRACTICAL SUGGESTIONS TO ALL OUTDOOR PEOPLE

VACATION TRIPS will be given considerable space, and this number will give you a vast deal of practical information about real, common-sense, health-giving vacations, whether you have much or little to spend.

INFORMATION FREE TO READERS OF "RECREATION"

WHERE TO GO. We believe that "RECREATION'S" INFORMATION BUREAU" has more valuable information at its command concerning various places for vacations, with all the good and bad points of each place, what it will cost, and other details, than any other organization.

RECREATION'S POPULAR "BEEN THERE" STORIES

RECREATION'S Popular "Been There" stories are written by people who have "been there" and know where they write. They tell all about vacations spent in widely varying sections of the country. They save you the usual "experimental first trip," and start you right. They tell you how, when and where to go, what to take and what to cost.

A Few of the Leading Articles in June "Recreation"

CANOEING ON THE CHARLES RIVER A SYMPOSIUM OF VACATION TRIPS—BUILDING RECREATION HOUSES—LIVING IN A HOUSE TENT—A NEW GAME FISH—OLD FASHIONED BASS—SWIMMING STROKES—RECREATION TRIPS ON HORSEBACK. A DOZEN OTHER ARTICLES, AND ALL BEAUTIFULLY ILLUSTRATED.

ON ALL FIRSTCLASS NEWS STANDS 25 CENTS A COPY

"A PACK OF FUN"

"THE FISH THAT GET AWAY"

"CAMPING OUT WITH A BABY"

These booklets, which will delight the reader, are jam full of good, practical information and interest to outdoor lovers. Freely illustrated, at cents each, the three for 25 cents, by mail, postpaid.

SPECIAL OFFERS TO YOU

1.—To introduce "RECREATION" to new readers, we will send it from June to December inclusive for \$2.00. June and December numbers are 25 cents each. We will also send FREE to every one accepting this offer the

three booklets named above. Subscribers in Canada add 25 cents for extra postage.

2.—If your newspaper cannot supply you with the June number, send us 25 cents and we will send the copy to you. If you will give us the name of the dealer who cannot supply you the June number when you send your order at, we will send you free any one of the booklets named above.

HARPERS BOOKS

The Barrier

By Rex Beach

It means something to the man or woman who has not read it that *The Barrier* to-day is the best-selling novel in America. It means a narrower life—narrower by the pure joy and stimulus of this big, beasty story. The crises continue to say that *The Barrier* is even better than *The Spoilers*.

King Spruce

By Holman Day

This story of a fight for love takes you away completely from the every-day grind. You get into the turbulent lumber woods—immediately in the first few pages you are there breathing the tonic of pine—not only to hear a story, but participate in things that actually happen. The pictures in colors add to the book's attractiveness.

The Golden Rose

By Amelie Rives

Beauty of sentiment, beauty of scene, of character and literary style make this a most unusual novel. The story is unfolded at a delightful country estate in mid-summer, among shadowy lawns and odoriferous gardens, filled with tender memories. The author of *The Quack* or *the Dead* returns to the scenes of her first triumphs in this novel.

Santa Lucia

By Mary Austin

In simple fashion this tale begins to reflect the lives of a number of interesting persons in Santa Lucia, with its pretentious suburbs, its aspiring college and narrow social order. It moves gradually into a powerful and rapid narrative—a genuine story. It is a pleasure to add that the book has uncommon literary excellence as well.

Purple and Homespun

By Samuel M. Gardenhire

A keen story unfolding the brilliant vistas of Washington official life, down which the view is never tiring. A self-made man and senator sighs for the heart of the daughter of an ambassador. The reader soon suspects that there is a strong bar, and the mystery makes a big story.

The Merchant Who Found Himself

A CERTAIN merchant in the East, owning a retail clothing business left by his father, found himself a few years ago with surplus money and energy that led him to establish another store in a nearby town.

Now, his father had been the best patronage in that city by selling leading lines of men's hats, the name of any one of which is nationally known for high quality. The elder merchant had carried two of them almost from the first year their manufacturers had made hats. There are certain standard makes of men's clothing, and this store had for two years carried one of them. It was the same with shoes, collars, shirts, undershirts, etc. The stock comprised everything needed to fit out a man or a boy. But every article was sold on the reputation of the manufacturer, and bore his label, which was well and favorably known through national advertising.

The son had continued this policy. But now he thought it time he was making a reputation for himself. Everything sold in his new store should bear his own label, and nobody else's. He wanted his name on the best merchandising, however, so he went to the manufacturers of these very lines handled by his father and himself, and arranged to get precisely the same goods, to sell at the same prices, but with his own label attached instead of the manufacturer's.

When his new store opened it had identically the same merchandise as the old one, except for the makers' names. The merchant advertised liberally in the local papers. He guaranteed the trustworthiness of everything sold. He laid emphasis on his reputation, his experience, his skill as a buyer. His store immediately took the leading patronage in that city.

At the end of three seasons, however, the proprietor went to the manufacturers, acknowledged that he was wrong, and directed that their own labels be restored to what he bought. Trade was not increasing as it should. The old store showed greater growth in the same period than the new, though the latter was in new territory. It took too much time to persuade customers that a hat made by the well-known Blank

Company, bearing only this merchant's name, was as good as the same hat bearing Blank's name. So the old labels were restored, and during the fourth season the gains in trade were more than double the whole growth during the first three seasons. To-day that shop bears a large sign. At the top is the merchant's name, and underneath the names of fully a dozen manufacturers of standard articles of men's wearing apparel. He is glad to let it be known that these manufacturers are, as it were, partners in his business.

The retail merchant is doing the best for his patrons and himself when he puts most of his energy and ability into the work of selecting and distributing goods, and leaves manufacturing and the making of reputation to the producers. Some merchants buy goods too cheap, and others too dear. Some carefully select stock that is not in demand. Others buy too much. In the end there is dead stock, dead trade, dead capital, and a dead business.

Nationally advertised goods carry the least risk of becoming dead stock. Live energy is behind them. More than that, real demand is behind them, for the manufacturer has tested them in many markets to find out whether the public really wants them, and whether it will want them again, and again, and again—and yet again. Enormous national sales are necessary to pay advertising bills, because competition keeps the advertising expense down to an infinitesimal fraction on each sale. A good deal is heard from time to time of the commodity that is ten cents value and ninety cents advertising. But who ever knew such a commodity to gain a national demand or hold it?

Nationally advertised merchandise has behind it the element of publicity that gives news value, tells the consumer what he is buying, and makes stability of quality imperative. The merchant who handles merchandise advertised in this way is going with a powerful current of distributive energy. Retail experience has demonstrated that it is to his best interest to peddle a link with the current himself.

The Quoin Club TIT IT Key

THIS little 16-page monthly, half the size of magazine paper, will be sent on request to any Discerning Man who is interested in advertising. Address: Quoin Club, care Fifth Street, B. P.

Merely to mention a new book
by this greatest of story-tellers
at once arrests our attention.

R. J.'s Mother and some Other People

By

MARGARET DELAND

Author of "Old Chester Tales"

IN all of Mrs. Deland's work there is a haunting quality, a strange sense of spiritual beauty which makes for remembrance, and which transforms these creatures of her imagination into breathing men and women. As for "R. J.'s Mother," the author never more successfully wrought a story containing such deep and simple elements—two lives that have suffered and come together through the common experience of love. Mrs. Deland's stories *help*.

THE GREAT BOOK ON MENTAL HEALING

Hypnotic Therapeutics

By Dr. JOHN D. QUACKENBOS, A.M.

The author has received the following remarkable letter from the rector of Emmanuel Church, Boston, the birthplace of the new movement for Mental Healing:

Dear Mr. Quackenbos:

I have just finished reading your book, and wish to congratulate you on having completed so important a piece of work. It seems to me one of the most practical and comprehensive statements of the value of hypnotic suggestion which has been written in English. It is certainly, as far as I know, the most important contribution on the subject in our American Literature.

Believe me,

Yours sincerely,

(Signed) ELWOOD WORCESTER.

THE SERVANT IN THE HOUSE

By
Charles Rann Kennedy

We do not publish plays—but here is a drama so great, so compelling, so reverent, so akin to all the beautiful and permanent things in life, that it is more than a play, more than a novel, more than a mere book. It is a page from life itself, revealing the brotherhood of man as a real, breathing thing; showing how the impossible has become possible. According to the critics, "Not in a lifetime has such a wonderful play been created"—and it reads as well as it acts.

"I have tried to set forth the only feasible law in society, that of a spiritual brotherhood among mankind, which is both Christianity and Socialism."

—Charles Rann Kennedy.

COMMENT

What Taft Said About Grant

The strong light that beats upon a throne is twilight compared with the light that beats upon a candidate for President of the United States, especially just before convention time, when a lot of earnest hands are practising to beat him for the nomination. Of the velocity and power of that light Secretary Taft has just had at this writing an interesting experience. On Decoration day the Secretary made a speech at GRANT'S tomb. His subject was GRANT, and his address included this passage:

It is true that GRANT received no education at West Point, but certainly nothing was developed there in him to indicate his fitness or ability to meet great responsibilities.

He did well in the Mexican war, as did other frontiersmen. He manifested an exceptional quietness, energy and familiarity with his duties. But in 1864 he resigned from the army because he had to. He had yielded to the weakness of a taste for strong drink, and rather than be court-martialed he left the army. He returned from Vancouver, on the Pacific coast, to his family in St. Louis without money, without property—a disheartened man. He accepted from his father-in-law a loan of seventy-five acres of land, upon which he constructed a house for his family to live in, and there he carried on farming operations. His chief business seemed to be that of selling wood, of cutting it, and piling it in the back yards of the well-to-do people of St. Louis.

After six years of this life he gave up farming because of ill health and went into the real-estate business for a year. He failed in this. His associate dissolved the partnership. Then at last his father offered him \$500 as a clerk in his leather store at Galena, Illinois, and then he moved from St. Louis. He worked here for a year also. During these seven years, though everything looked dark, he overcame in a great measure his weakness for strong drink. But he was so constituted that it seemed impossible for him to earn a livelihood even when he had given hostages to fortune in the shape of a wife and four children.

Our neighbor the *World*, using an important item in those remarks of a candidate about a former Republican President, has been at pains to learn and disclose how other persons felt about them. It prints telegrams from such noted Republican patriots as WILLIAM E. CHANDLER, JOSEPH B. FORAKER, and MRS. JOHN A. LOVON in disparagement of Mr. Taft's taste, or accuracy, in making these allusions. It also quotes expressions of regret or offence from Grand Army men in New York, Buffalo, St. Louis, and other convenient centres, and from sundry prominent Southern women, and from various authorities, some of whom testified that what Mr. Taft said was not true. "Taft's Attack upon the Memory of General 'I. S. Grant'" was the *World's* heading for this collection of gossip, and it gave what strength and prominence it could to the idea that Taft had assailed GRANT'S memory.

Grant's Eight Years of Struggle

Well, the *World* is a Democratic paper, and Taft is a Republican candidate, and a strong one. All things considered, the Secretary, as long as he was not writing history but speaking a eulogy, might have passed more lightly over the part of GRANT'S life which immediately preceded the war. But he was too honest to do it. Painting his CROMWELL, he put in the wart, and made his picture true, as far as it went, to nature. Of course the idea that he traduced GRANT or dealt unkindly with his memory is too absurd to discuss. GRANT was far too remarkable and important a person for any part of the story of his life to be spared from history. No part of it is disgraceful. He was always honest and always faithful. The story of the exceedingly severe discipline of life that he endured in early manhood is essential to the comprehension of his character. He had later in him great military abilities partly developed by his military training. He had no business aptitude at all, and after he first left the army he had to make his living by manual work. That alcohol was a snare to him for a time, and a danger to him for perhaps a dozen years, is matter of common knowledge. He never was dissolute, but his temperament did not fit in well with whiskey, and he could not drink spirits in moderation and with safety. So in the end he gave up alcohol altogether. How much too much he ever drank is not important. What is important is that after he left the army he turned to the support of his family, and kept on working, chiefly with his hands, for eight years, controlled and amended his habits, and came to the Civil War tolerably fit for the great work to which he had a calling. Whatever his habits were, and however much or little they had to do with bringing him to poverty, it must be estimated that those seven years had a vastly important influence for the strengthening and hardening of his character, and in qualifying him to carry the immense weight of responsibility that was laid upon him in later years. It is discipline and struggle that make men strong. GRANT met his discipline, struggled through his hard places, and came out finally a man of profound and stoical self-reliance at a time when such a man was indispensable to the country. Nothing that is true can be said to the detriment of General GRANT'S character. What Secretary Taft said accords with accepted biography. It won't hurt GRANT, and we trust it won't hurt Taft. Certainly it ought not to.

Great Is Truth, and Mighty Above All Things

There are people who shrink so timidly from all contact with what is painful in life that in writing the story of a sailing-vessel's voyage to California they would edit Cape Horn and its buffeting out of the narrative, and run their ship through the Strait (where sailing-vessels seldom venture), because the winds and waves are calmer there. They like all stories to be nice, and they are the sort of people who will be most discomfited by what Secretary Taft said about GRANT. For GRANT, in his younger life, went round the Horn, and met great gales there and rode them out, which was the gist of what Taft said about him. For Taft, like all robust spirits, has a natural leaning towards the disclosure of the truth. In explanation, for the benefit of those who need it, of the reasonableness of that leaning, it may be profitable to quote here again some lines, well seasoned with time, that were quoted in last week's *WEEKLY*:

As for truth it endureth and is always strong; it liveth and conquers forevermore.

With her there is no accepting of persons or rewards; she doeth the things that are just, and refraineth from all unjust and wicked things; and all men do like well of her works.

Neither in her judgment is any unrighteousness; and she is the strength, kingdom, power, and majesty of all ages. Blessed be the God of Truth.

And with that he held his peace. And all the people then shouted, and said, Great is truth, and mighty above all things.

Insured Against Panic

It is not expected that the provision of the compromise emergency currency law which finally passed the Senate over the opposition of Senator LA FOLLETTE will ever be tested by actual use. The bill is drawn to last six years, and nobody looks for another critical financial disturbance within that time. Moreover, the law provides for a national monetary commission to revise our whole currency system and put it on the best and safest basis that the wit of our legislators can

device and enact; and there is reasonable expectation that the commission will do its work, and that Congress will endorse its findings, long before the life of the law just made runs out. But just as that modern navy best justifies its existence which never fires a gun except in practice, so the more the country does not use this new money law, the better is justified the great exertion made to pass it. The sole purpose of the law is to keep off panics by providing means to huddle and abate them if they come. It makes it possible for the banks at a pinch to get hold of and issue five hundred millions of money, based on State, city, town, and county bonds and on good, two-name, commercial paper. The bonds will be good for ninety per cent. of their value in new circulation; the commercial paper for seventy-five per cent. This emergency circulation will be taxed at a rate beginning at five per cent. a year during its first month, and increasing gradually to ten per cent. a year, thus insuring the retirement of the new money as soon as the crisis has passed which it was intended to meet. That the new law is a perfect measure nobody claims, but it does seem an exceedingly useful purpose of diminishing reasonable causes of anxiety and lightening the burden of care which our responsible financiers have to carry. The men who have to face panics when they do come are glad to have this law. It gives them ammunition with which to fight off ruin when it threatens. The Republican party, on whom rests at present the chief responsibility for the welfare of the country, can meet at Chicago with easier minds for having this detail of accomplished duty behind them.

"Bond the Guardians!" Cries Weyman

Brother BRYAN grieves sorely in the *Commonwealth* because the Pennsylvania delegation got away from him. With a voice still trembling with sorrow and indignation he tells how "at the primary, where the voters had a chance to express themselves, more than two-thirds of the district delegates were instructed, and yet in the State convention the delegates elected at the same primaries joined in with a political lunge to defeat instructions." Awful, awful! Desperately wicked is the heart of a delegate, and deceitful clover all things, Shackle the rebels; gag them; put manacles on their ankles and ship them to Denver under charge of responsible keepers; that is the only safe way; and that is none too safe, for who will keep the keepers? But hear the Nebraska shepherd's own voice:

ONLY BY INSTRUCTING CAN THE VOTERS CONTROL the instructed delegate in a guardian without bond.

Chance me no chains, cries WEYMAN. Bind the delegates and bond the guardians. Give the rebels the best chance, and they will dish you sure! Oh, WYMAN! WYMAN! how slumber than a serpent's tooth it is to watch a passion wane!

Only One Peerless American

Our good friend T. W. LA FLEUR, of Belle Fourche, South Dakota, in writing to approve us of his resolution to deny us in the future the hospitalities of his mind and roof, makes this interesting declaration of his convictions:

I am a Democrat and am a profound believer in the political principles advocated and advanced by those peerless Americans, WILLIAM J. BRYAN and THEODORE ROOSEVELT, and believe them to be the two greatest Americans of the present day, with few peers in past history.

Gently and respectfully, but with such firmness as we can command, we deprecate this duplication of peerlessness. There is but one peerless American. There cannot be another. The country might stand another, but the language couldn't. If there were two, there would be none, because each would have a peer. As it is, no slunk of ambiguity diminishes this glorious title. It belongs without competition or dispute to WILLIAM JENNINGS BRYAN, of Nebraska. He is The Peerless American. The Peerless Leader, and no other need apply. If any other dare apply, he will wish he hadn't, because the present incumbent proposes to hold the job. As for President ROOSEVELT, he is undoubtedly eminent, but he never set up to be peerless, and truly we question very much whether he would be grateful to our South Dakota friend for yoking him up with Dr. BRYAN as a co-proprietor of that courtesying word.

Needed Naval Reform

As usual, Congress has been accused of having done little else than appropriate too much money. Be this as it may,

we were reminded on the last day of the session, when the newspapers were describing Senator LA FOLLETTE's wasteful eighteen-and-one-half-hour performance, of a condition of things that has too long vainly demanded correction at the hands of Congress, namely, the inadequately supervised working of the various bureaus of the Navy Department. On May 29 Secretary MITCHELL announced the impending promulgation of General Order No. 66, which is:

Hereafter all orders issued by the Secretary or Assistant Secretary of the Navy direct to any commandant or other officer in the naval service shall be executed, and the officer to whom such order is issued shall promptly notify the bureau, or senior officer concerned, of its receipt and execution.

This order carries a most distressing implication, but it cannot fairly be taken as an announcement by the Secretary that henceforth he will pass upon all the work of the bureaus—indeed, he is unable to do so properly for want of technical knowledge. Such supervision has been hitherto attempted by the Board of Construction and the General Board. What seems to be needed, and what we, believe, been frequently suggested, is an additional Assistant Secretary, an officer of the line, who shall have authority to pass upon the technical proposals of the bureaus. Not until Congress has authorized the appointment of such a supervisor may we cease to expect the occurrence of cases similar to that of the officer who, after having dined the earth with cooling stations at considerable expense to the government as a bureau chief, was returned to sea service, only to find that he could not take his ship into one of the same for lack of water to do it in. This officer was competent, but even officers make mistakes unless they have some one to keep tab on them. Another reform sadly needed is the introduction of some system of elimination whereby officers will be enabled to attain flag rank at an earlier age. When this and adequate supervision of the bureaus have been achieved, and not until then, will our navy be ready to go to war; for, although most people don't see it, it is not wholly in ships and crews that a navy consists.

The Works of Transist and the Fields Public

TO THE HON. JAMES SCHORNGAST SHERMAN has been given "the roundness of the moon" and "the heat of the fire," and notwithstanding he is being spoken of as the next Republican nominee for the Vice-Presidency. Oh, the fitness of public taste thus so soon to have turned from "the undulating curves of the serpent, the graceful twist of the creeping plant, the light shivering of the grass blade, the slenderness of the willow," and "the chill of the snow"!

Is Socialism Coming or Going?

At a socialist meeting the other day in New York, Mr. CARR, a Chicago clergyman, spoke of FRUENZ DREIS as "speaking his message in this generation as MOSES and CHRIST did in theirs." Everybody, including Dreis, spoke handsomely of Dreis at that meeting. A shouting woman proclaimed him to be "the living link between God and man." There were a good many ministers at the meeting; the poet MARKHAM was there, too, and Mr. ROWLAND KELLY, late of Paris, and Mrs. ROSE PETER SPINKS, and altogether it was a very prosperous unsemliness, and fit to encourage the Rev. Dr. LANGE, of Brooklyn, to say, as he did, that "we are standing on the verge of the greatest movement in centuries." And yet it is worth observing that FRUENZ, a stronghold of the socialists, has recently shown noteworthy signs of reaction. The municipal elections of May 3, which generally indicate which way the cat will jump, showed decided losses for the socialists in the majorities of every considerable municipal council except one. Brest and Rouges have virtually swept their councils clean of socialists, and at Marseille and at Lyons they lost control; at Lille and at Roubaix they met defeat; and Toulouse itself, the city of JUVARS, has turned her back upon her leader. The case of France is in point, because France has had a fair experience of socialism. M. CLEMENTAUX himself, the present Premier, in whose régime all this is happening, was the leader of the very first radicals against GAMBETTA and JULES FERRY, and the founder of radical socialism. Yet it is under his government that the reaction has set in, and all France, which is a property-owning country, recoils from the threat of collectivism. In this country our socialist friends are still in the febrile stage of hubbubination.

The Catch-as-catch-can System of Education

The Commencement season being now on and proceeding merrily, it is a bit time to remark how much the current catch-as-catch-can system of college education is under scrutiny and criticism. The scrutiny yields the general impression that the development of the elective system gives to students in the larger universities an enormous choice of studies, but no certain and consecutive drill in anything. It seems to say to the student, "Here is all knowledge, expounded by specialists; choose such branches as seem to be your size, and go in and wrestle with them." And the student chooses according to his lights and strength and ambition, and duly wrestles. If his purposes are sufficiently definite, and he is well enough advised, he may do very well; but if he is in college with a vague idea of getting an education, he is apt to flounder pretty helplessly in the great sea of choice. To be sure he has appointed advisers who know about the courses, but how do they know about him? His father tries to help him, but his father is an amateur of education, with some notions about what it is useful to know, but with very little real knowledge of the general subject. More important usually than what the youth studies is whom he studies under. Out of men more than out of books come the greater lessons, and nothing is set down in the pamphlets that enumerate courses about the capacity of the men by whom the courses are given. So in the end the father usually turns out to be a very halting helper, and in the end he is usually found wondering in a bewildered way what his boy is really getting in the mental-treatment line in college, and whether it is worth the time and the cost of admission. He hopes it is, and believes it is, but his belief is a pure act of faith. He does not know, and can rarely find any one who can tell him.

What Is Coming Next?

So there, or thereabouts, is where the elective system has come in this year of grace. It is splendid, but chaotic. It is doing an enormous business, but doing it apparently with speculative students and bewildered fathers. It is felt to stand with validity for progress in education. Its hardest critics usually admit that with all its faults it is better than the Prussian system that preceded it. Its observers for the most part lack qualifications to criticize it helpfully. They observe that it is queer; it seems to them more of a gamble than it should be, and they wonder whether its defects—if it has them—are capable of correction and will be remedied. They feel that when Youth is given a seat at the paternal cost at Wilson's board there ought at least to be a table *d'étiquette* repast, or even a choice of them, available for him, if he lacks the necessary judgment to make a profitable selection *à la carte*. Dr. Wilson's current attempt to meet this reasonable yearning at Princeton interests them very much, they try to weigh the objections made by Mr. JOHN COMBES to the alleged Germanization of Harvard, and they wonder whether President ELIOT's splendid achievements as an innovating educator are only a noble phase in the progress of education, and whether there are not very interesting turns and changes and developments still ahead. Dr. Eliot has been an apostle of freedom in universities, and has struck some shakles from some slaves that never can be snapped on again. But the next set of ideas in a strong man's mind that will shape the course of the colleges are not likely to be quite the same as his. They will build on his foundation, but what will be the edifice? There will be new problems and new ways to meet them; an effort perhaps to run the great universities a little less like department stores where clerks will sell you anything you ask for, and a little more perhaps like institutions where needs are studied by the expert, and great teachers inspire and stimulate the mind of youth.

Not a New Speech, Anyway

It is an interesting fact that the identical speech about General GRANT which Secretary TIFT made on Decoration Day was delivered by him three weeks before before a crowded audience, and excited no unfavorable comment whatever. Among those who heard it, and who made acknowledgment to Secretary TIFT after the address was over, were persons of all other nations have been hurt in their sensibilities if there had really been anything in the speech to hurt them.

A New British Confederation

A resolution of great importance to the British Empire, as well as to the future of South Africa, was adopted the other day by the delegates from Britain's self-governing colonies in that part of the world who have been assembled at Pretoria in an Interstate Customs and Railway Conference. The aim of the resolution was to bring about the prompt establishment of a South-African federation analogous to the Dominion of Canada and the Australian Commonwealth. The step now taken at Pretoria is precisely analogous to that which was decided on by the convention of American States at Annapolis in 1786. The latter convention was itself unable to do anything to strengthen the government formed by the Articles of Confederation, but it started a movement which was to have momentous consequences by calling on the thirteen States to send delegates in the following year to another convention in Philadelphia, which should have power to propose tentative amendments of the existing compact, which, when ratified by the States, should become part of the Federal organic law. Itself abortive, the Annapolis convention was destined to bear transcendent fruit. On the face of things, the Pretoria conference seems likely to have a speedier and a no less far-reaching effect on the political relations of Britain's self-governing colonies in South Africa, for the delegates to it are composed of ministers and high officials, and therefore represent in an unusual degree the preponderant party, which, so far as three of the four colonies are concerned—to wit, Cape Colony, the Transvaal, and the former Orange Free State—is that of the Boers or Afrikaners. There was no suggestion or ambiguity in the expressed intention of this party. The announcement made by the conference was that the delegates had agreed upon the principle of closer union, had undertaken to submit to their respective parliaments certain resolutions embodying that principle, and that they would recommend their parliaments to appoint forthwith delegates to a national convention whose business it would be to frame a draft federal constitution. There is no doubt that the parliaments of the three self-governing colonies which are controlled by Boer ministers will quickly carry out the plan proposed at Pretoria. It is only in Natal that opposition must be expected, and it is not for Natal's interest long to hold out against the project of South African confederation.

If we turn to the details of the scheme propounded at Pretoria, we find that the national convention is to consist of delegates proportioned numerically to population, namely, twelve from Cape Colony, eight from the Transvaal, and five each from Orange River Colony and from Natal. It is also proposed that the delegates shall vote by head, or individually, and not according to states. The delegates to the Philadelphia convention of 1787 voted by States. Indeed, they would have accomplished nothing had they pursued a different course, for at that time the States were jealous of their political equality, and would not have accepted the Articles of Confederation but for the agreement that in the unicameral congress created thereby each State, whether large or small, should have an equal voice. The same principle of equality was adhered to in the provision of the new Constitution defining the composition of the Federal Senate, and also in the stipulation that whenever the choice of a President should be relegated to the House of Representatives the vote in that body should be by States. It may be that Natal will refuse to enter the coming national convention, unless her demand that each of the four colonies shall have an equal vote is granted. It would seem that such a concession might safely be made, in view of the fact above mentioned that the Boer or Afrikaner element is dominant in the three other colonies.

That the ministers of Cape Colony, the Transvaal, and the Orange River Colony have already definite conceptions of the features which, they think, the draft scheme of confederation should contain, is evident from their agreed statement that the subject of unification shall undergo no extensive parliamentary discussion until the national convention shall have drawn up the proposed organic law. Of course the state legislatures will have to be asked to give their assent to the appointment of delegates, but it is understood that outside of Natal the request will be purely formal and acquiescence perfunctory. Even when the draft constitution is submitted to the colonial legislatures, no power of amendment will be conceded to them, but they will be called upon either to accept or reject the proposed federative policy, so great is the pressure that ministers are able to apply, that nobody doubts their ability to secure a prompt adoption of the new scheme of confederation, so far as all the South-African self-governing colonies are concerned, except Natal. We should not overlook the reason why Natal, small as she is, may think that she ought to exercise in the national convention an influence out of all proportion to her population. The Transvaal and the Orange River Colony have no seaport, and they would encounter it a great hardship if their exports and imports had to be moved exclusively to and from the distant harbors of Cape Colony. For the Transvaal and the Orange River Colony the nearest route to the sea is by way of Natal, which has a long coast on the Indian Ocean. It is hardly possible, however, that the two inland Afrikaner colonies might get on without Natal if Portugal would agree to sell to them its

Southeast Africa dependency, or, at least, Delagoa Bay, which already is connected by rail with Johannesburg. That such a transaction is conceivable may be inferred from the fact that delegates from Portuguese Southeast Africa have taken part in the Customs and Railway Conference at Pretoria, except when the question of South-African Confederation was discussed.

What is the attitude of Great Britain toward the projected union of the South-African self-governing dependencies? It is one by no means of indifference, yet of self-contained inability to interfere in the slightest degree with the fulfillment of the wishes of the colonists, or to exert any influence, even indirectly, on their decisions. A good deal of water has flowed under the bridge since England strove to subdue the thirteen American colonies which had declared themselves independent: or since 1867, when DISRAELI had almost as much to do as SIR JOHN MACDONALD with drafting the British North American Act; or even, finally, since the Salisbury government undertook to covey the Boers of the Transvaal. As lately as May 13 the British House of Commons unanimously passed a resolution expressing confidence that the Liberal government would welcome the adoption of proposals in the approaching national convention at Pretoria calculated to render possible the ultimate inclusion of the whole of British South Africa (including Rhodesia as well as other Crown Colonies or protectorates) in a federal union. At the same time, one of the ministers declared that the government, warned by precedent, was determined not to attempt to lead, but rather to leave the matter exclusively to the self-governing colonies of South Africa themselves. All it could do, he said, was to watch with folded arms, but not without solicitude, the spectacle. The impassive attitude was further emphasized by Mr. CANTHILL, who acknowledged that Great Britain could only watch and wait. A spokesman of the Unionist party in the House of Commons concurred in taking the same acquiescent position.

It follows that the three Afrikaander colonies will be allowed to form just such a union as they wish. Are they likely to frame a federal constitution on the model of that of the Canadian Dominion, or on that of the Australian Commonwealth? It will be recalled that the former federal organic law is much more centralized than the latter. As regards the concentration of executive and judicial powers, the Dominion of Canada is a nation rather than a confederacy. Its provinces occupy the status rather of provinces in the French Republic than of the States in the American Union. The structure of the Australian Commonwealth is radically different. As regards the powers reserved to the constituent states, it is comparable with our own Constitution, though the type of the federal government is different from our own in that it is Parliamentary rather than Presidential.

Who would have believed eight years ago that England, after expending hundreds of millions of dollars and thousands of lives on the conquest of the Transvaal and the Orange Free State, would, within a decade, permit them and their fellow Afrikaanders of Cape Colony to organize a confederation the subjugation of which, should it cost independence, would entirely transcend the resources of the United Kingdom?

Pursuit and Pause

"To want to be wanted, to fight and be shorn, single-handed, for a place in the world, are evidences of strength," writes Dr. NATHAN PAGER in his anonymous and untechnical volume entitled *Confession Medici*. Indeed, with an English largely derived from our vivid and vital American psychology, and with a large score of all side issues in the background, Dr. Pager urges young doctors who are willing to turn to him for advice to be doctors first, and whether they ever grow to be men or not seems hardly to matter, if only they manage to attain to the great modern market ideal, success. Whether they live as they pass along the way seems to him a minor matter. One thing they must take to heart—if they are going to be doctors, they will have no time to "think about thinking or feel about feeling"; their business is to hustle, to build up a practice, produce the impression that they know what they are about, and that it is by no means their fault if the mixture fails to cure the patient upstairs.

Well, success is something, though when one contemplates the great number of those who have succeeded, one cannot but pause to wonder if the prize is really worth the price. And as to the victorians, how will they ever tell us? For it is the first rule of the game that they should not have pause to consider or be conscious. Dr. PAGER gives us a warning instance of a doctor who took an interest in the latest drama and whose practice waned, and the first thing he knew the drama palace in interest, his practice had vanished like snow in winter, and he was left without doctors and without patients in a most pitiful case.

Every man cannot be a philosopher, but one would like to hail SOLER from the shades and set him to questioning and demolishing Dr. PAGER's theory of success, which so closely resembles the theories of the worldly CALLENS. Dr. PAGER cannot too strong-

ly express his repugnance of the retiring temperament. "Other names for this temperament," he says, "are unassuming, mild, soft, feeble." Such a person will never, never fight, force his way, hold his own, and increase his holding, advance, bring up reinforcements, advance again, and beat thundering on the gates of success. . . . "In the nursery," he writes of such a person, "he was fond of his toys, but he let the other children play with them." Oh, reprehensible feebleness! "Compelled to take part in athletic contests, he behaved rather than played; . . . diligent, polite, tidy, punctilious in religion, and glad to share both his prayers and his hamper with other boys; found on the side of the authorities in times of feud, and bearing his own authority, when it came to him, with provoking meekness." Such boys hold on the outer world, Dr. Pager insists, is all wrong. What we have to do in this world from the beginning is to knock down and grab. There is quite evidently not enough success to go round, so the main tenet in the good doctor's philosophy of life is that we are here to fight, to push, to elbow, to gain importance and fame.

"For still the Lord is Lord of might.
In deeds, in deeds He takes delight."

So he harks back to the old dispensation. It seems odd that a good man and a worthy can still live and succeed in the world in the twentieth century, and evolve a theory of life and publish a charming book about it, without the faintest or dimmest consciousness that the Christ had ever lived or spoken an authoritative word.

Only one chapter hints at something beyond man's strength to grapple with. The old Greek Destiny vaguely occurs to Dr. PAGER as a possible antagonist greater than man's power of pushing. If accident, or disease, or old age force you to the wall, then, says Dr. PAGER, you must console yourself with reflecting that once, at any rate, you were capable of knocking down your antagonist and getting what you wanted. Dulness in old age is better, at any rate, than old issues in the fight of life.

The tiger and the ape in man commend the whole faith of this good and successful doctor, and for countless men to cultivate them diligently and become successful at whatever cost, and perhaps the Lord will preserve them from any pause in activity wherein to weigh gains and losses and find out the true value of what they have shored and elbowed to get.

Any man's theory of life frankly set forth is interesting and valuable, and the chief interest in this volume is the discovery of how very shallow a consciousness the successful consciousness is, how very slight its content.

Each man faces the Sphinx, and each makes answer according to the depth of the vessel which contains his mortal consciousness. There are some who, when Destiny overtakes them on the pilgrimage, as it shall each wayfarer sooner or later, when the inevitable pause for reflection comes, shall be consoled not by the vision of all they have knocked down and elbowed out and grabbed up, but by the consciousness that they in themselves are something. That by a few side issues, a little turning aside duty from the battle and the turmoil of life, a little giving way and making room and respite, they have built up in themselves a kind of pervasive peace, a serene shadow perhaps of that which passeth understanding, but in the light of which personal success or non-success seems no more than a dust storm dancing in the ray of sunlight. It will be hard to define this goal, for it neither glitters like gold nor twinkles like cymbals; it does not come by grappling, or forging ahead, or hustling; it evades force and cunning, and the world's business did not give it nor ease it take. It is subtle to the fulness of being, and it does more toward a true contentment than fame or millions. After all, we cannot all stand up in the front rank of life; there is too much hustling and elbowing there now, and the crowd and the combat are daily increasing; but if some of us elect to be stragglers on life's march we may perhaps be more serene, watch the wind often as it fans the clouds across the sky, and pick more wild flowers. And these parasites, say what one will about diligence and concentration, add to consciousness, and he is not a wise man who overlooks such adjuncts. It is possible to build a more stately dwelling to the mansion of one's soul by a lazy swim round a wooded bay, with the eyes fixed on the girdling pine-clad banks, than by elbowing a man out of the way and getting his seat on the train. It induces a finer quality of thought, and therein, after all, lies true blessedness, as ST. FRANCIS would say. Not forging ahead and winning out, but ever more and more refining the quality of the thoughts that visit us, enlightening our consciousness, sowing sympathetic words, and arousing ourselves to mild gestures, these achievements make for higher civilization and transform the world of ages and tapers into a world of men and women. As we purify body and soul of self-interest, as we grow toward self-reliance and impersonal views, we understand the value of acquiescence; the great seething cauldron of life ceases to be a place of torture whence we struggle to escape, and life appears to us in other forms, forms of beauty and vitality and peace, and we come to believe that beyond the life militant,

with its towering successes, there lies the life triumphant, where every gain of ours is a gain to all men, and where all joys and all sports and all blessedness are freely offered to whoever will partake.

Dr. PAIGE takes as the motto of his volume STEVENSON'S beautiful tribute to his doctors, "The physician is the flower [such as it is] of our civilization," etc. But STEVENSON would have been the last to have approved Dr. PAIGE'S view of the physicians' aims and objects, for, when all is said, it was not their bustling and bustling, their skill or their fame he commended, but it was their personality as healers. The dedication to his various doctors tendered gratitude for kindness to a stranger, to a good genius among frosty mountains, to one whom he knew but a week and another whom he knew but ten days, and who yet knew how to write their names deep in his memory; to another whose visits made it a pleasure to be ill, to one wise in counsel, and another unwarlike in kindness, and another who knew how to be a friend. These were not just successful doctors; these were healing personalities; and so, though we highly commend Dr. PAIGE'S essays for their vitality and ease and charm, we should only put them into the hands of those who would strenuously refuse all his advice, and who already know that there is more true living and vital growth in the power of activity than in the maddest of pursuits.

Correspondence

"BE FAIR TO UTAH"

RAIN LAKE CITY, UTAH, May 14, 1902.

To the Editor of Harper's Weekly:

Sir—Some persons, under the signature of "Traveler" presents some interesting statements in your issue of May 6, touching "Certain Social Conditions in the Far West" and with especial reference to polygamy in Utah. "Traveler's" article is reproduced in the Salt Lake Tribune of this city today, with a number of these endorsing terms of indorsement which suggest paterfamilias. The Tribune is seriously impressed with the notion that it will help Utah to have people in your part of the country believe badly of people here. Which I regard as at least doubtful.

"Traveler" says, in the course of the article in the WEEKLY: "But that these plural marriages still continue, despite the sanction of the law, there is no sort of doubt, not only in the State of Utah, but in other Western States where thrifty and otherwise law-abiding Mormons have congregated in men or less numbers." That is pretty far enough for HARRIS'S WEEKLY to go. It is worse correspondence, if it is not true. Not only is there every sort of doubt of plural marriages in Utah, or anywhere in the West, but there is not the smallest scrap of evidence to support the statement or lead color to the belief. I am fully aware that Salt Lake people who mean a living by denying the facts are cleverly sidestepping argument by declaring that all the evidence of plural marriages is in the hands of the Mormons and they will not give it up. Which has a certain value. But it does not establish that you should believe a statement simply because there is no evidence in support of it.

I cannot find one reason to believe there has been any new polygamy in Utah. And I have looked for it. One man, a prominent Mormon, a polygamist, has been accused of new polygamy—that is, having taken a plural wife since the Supreme Court of the United States made its decision last year, and the Mormon church joined its manifesto abandoning the ordinance—written the past year. His name is Tanner. A letter was found among the effects of a woman recently deceased, and certain passages in the letter indicated Tanner's high regard for her, his discharge of certain business for her, and no more. There was quite a commotion here when this letter was discovered, and the home defilers blamed the statement all over the country that Tanner had been proved guilty of new polygamy. Tanner has demanded the publication of the letter by the people who took it from the effects of a deceased woman, and has flatly denied that he ever married the woman, while frankly admitting that he is a polygamist. That is, before the first court decision and the manifesto, eighteen years ago, he had contracted plural marriages. I don't know whether both his wives are living, but if they are, I have no doubt he is living with them. That is the condition here. Mormons who took plural wives previous to 1890 are not disturbed in their domestic relations; and there are no plural marriages since that date. It has seemed the less way to settle a problem which greatly distressed people whose more virtuous critics then in consideration. It seems to be fair to the women—who were sincere, whatever may be said of the men; and it has the merit of justice to children who, without demand of their own, became elements in the problem.

That is one case on which the verdict of new polygamy in Utah rests.

The other is this: A woman—name unknown—reported to the Salt Lake Tribune that she had heard an address or letter read in a country Mormon meeting-house, the text of which was that some changes in rules were in contemplation touching service. She added that she overheard some men members of the congregation, chatting after service in the vestibule, say when those changes were made maybe they would be permitted to take additional wives.

The letter has been published, and it contains nothing on which to base a belief that the Mormon Church contemplates giving permission for plural marriages. The Mormons themselves flatly declare they have no such intention.

I submit that there is not sufficient ground in these incidents

on which to have the charge that Mormons propose a revival of polygamy; and there surely is not enough to prove that new cases of polygamy have occurred.

To arrive at that conclusion two things must be admitted: First, things must be believed because there is nothing to prove them true; and second, all of the word and none of the deed is to be accepted as the act of a people; accepted as illustrative of that people.

Let me assure you: There is no new polygamy. The Mormons have quit in good faith, and they are not going back to it. They would not if there were no law against it, for they are quite in sympathy with the sentiment of modern Americanization; and besides, in the days of their greatest freedom only five per cent. of the Mormon men had plural wives. There are fewer than a hundred polygamists in Salt Lake City—a city of eighty thousand people, yet Mormon.

Let even HARRIS'S WEEKLY be fair to Utah.

I am, sir,

LE ROY ARMSTRONG.

FROM A SUSPICIOUS READER

New York, May 27, 1902.

To the Editor of Harper's Weekly:

Sir—I quote from a graduate New York morning newspaper: "The prisoners were taken to Police Headquarters, where they gave their occupations as peddlers, and were looked as suspicious persons for examination by Inspector McCafferty today."

The italics are mine, used in the hope that the vivid word may catch the glances of some noble editor and cause a change. Surely it is neither a crime nor a misdemeanor to be suspicious. It is not unlikely that these prisoners were held as suspected persons.

I know that the abuse of "suspicious" originates in the usage of the men behind the blotter in the desk of the police station; mine that these men are few, but in practice they are not so good as criminals to bother with mere questions of etymology. But I ask you to beg the editors of newspapers that publish police reports to give your old "suspicious" a much-needed rest and instruct all writers and editors to use the proper word. This will not diminish the glory of the reporters of newspapers, but it will spare the sensibilities of many a constant reader. I am, sir,

HENRY UNDERWOOD.

We cannot support our correspondent in his criticism. One meaning of "suspicious," as the dictionary defines it, is "open to suspicion, exciting suspicion." That meaning is well established. "Suspicious persons" and "suspicious circumstances" are in common use, and it is not bad use. "Suspicious" in this use conveys a different and more general idea than "suspected."—KNOTCH.

THE CANTEN IN SOLDIERS' HOMES

COLUMBUS, O., May 26, 1902.

To the Editor of Harper's Weekly:

Sir—In your comment on the cartoon you say, "veterans left to tormentors" and "it is seldom to the advantage of elderly men to change their habits, provided their habits are any wise reasonable." Upon you, sir, in practice they are not so good as your "comment" hangs the whole argument as to the wisdom of cantens in soldiers' homes. The Hon. Charles B. Landis, on this canten question in Congress, said, "I deny that the typical 'drunk soldier' is drunkard," and the able orator stated a truth for the "typical" Union soldier was always and is, if alive, sober in habit and decent in deportment.

The *senior* here and cry raised on behalf of the canten in soldiers' homes is raised on behalf of an element therein which has shamelessly and shamelessly brought disgrace upon these homes and on the devoted, orderly members by their habits and bad deportment let loose and given full sway through drunkenness; and the cantens therein have done their share to pander to and aggravate this greatest of all evils in these homes—in wit, drunkenness and debauchery. Every man who is a member in a soldiers' home knows that the large drunken class is fairly devoted in deportment, and, of course, sober at all times, when their reason money is expended and they are "broke," and that these same drunkards are in better physical health and condition when they can't get a drink. The way to eliminate drunkenness in these homes was easily pointed out by the Hon. Charles B. Landis, and it is not by way of a canten.

The numerous contingent of riffraff and scum which found its way to the army reader, actuated by every motive except patriotism, and proved to be unlikeliest, disgracing their uniforms and the flag they abandoned in every crisis, impeding additional duties and burdens on the true soldier, this contingent naturally composed the dissolute army, and has made of soldiers' homes a hell for decent society.

The more or less renowned effects of these homes might better tell the truth, when discussing for the canten, and say they favor pander to the dissolute element. The "typical" Union soldier, sober and self-respecting, does not ask for a drink-shop in the homes.

I am, sir,

A CIVIL WAR VETERAN.

Will you excuse us if we do not put entire confidence in your assertion that the only veterans who want the canten in the soldiers' homes are riffraff, scum, and drunkards and "riffraff" officers? Your letter would carry more conviction if it sounded more dispassionate, and less like the product of a trollop bigoted editor.

Finance

Has Currency Reform made Progress?

By HOWARD SCHENCK MOTT

the last day of the session, when discussion of the currency question had reached the point of utter disregard of the real merits of the legislation discussed; after six months of debate and compromise, closing with theatrical filibustering oratory; after a trumpeting at the beginning of the session from the President and the majority in Congress, that financial legislation would be enacted which should prevent panics in the future; after a practical lesson, contained in the appointment of a currency commission, that the problem is still unsolved—a scheme of currency reform, with the reform enunciated, attenuated and nearly eliminated, because the law of the lands will fail to avoid themselves, though in a different manner, of the material at hand; for otherwise they would be unworthy of their opportunities.

Last year a panic made the question of currency reform a vital and immediate matter, and the discussion, in and out of Congress, and has raised undoubtedly will take an important place in our history. Banking and currency questions have always been closely interwoven with our political life. No matter what the real needs of the country may be, no matter what experts may recommend as proper solutions of the problems, one point of view must remain paramount. All other interests, especially in a Presidential election year, must give way to party expediency. In the present case the chief reason for foregoing through some sort of currency legislation, whether in reality it is good, bad, or indifferent, lies not in the high wisdom of statesmanship, but in the necessity of providing in the next few months material for the Republican platform and for Republican campaign speeches. It is not to be expected that the legislation will fail to avoid themselves, though in a different manner, of the material at hand; for otherwise they would be unworthy of their opportunities.

Yet, in all soberness, if merely a serious and plausible measure has become law, in the last analysis it represents more than anything else the confusion of mind that has existed regarding the essential qualities of a sound currency system. This confusion has pervaded not only the mind of the average man, but the minds of bankers themselves. Nevertheless, at the meeting of the American Bankers' Association, held last September, a piece of constructive work was accomplished in the recommendation to Congress of a practicable scheme of currency reform; and the New York Chamber of Commerce Committee on Currency also, not long ago, made an excellent and informing report. Bankers all over the country have protested against the legislation which has finally found its way to the statute book. The Congress has seen fit not to regard the recommendations of expert "commissions" and individuals, but has enacted legislation with a view merely to its popular appeal and the avoidance of a political misstep.

If, then, out of a swirling eddy of differing views, conflicting interests, ignorance, and doubtful motives, anything thoroughly constructive had resulted, the occasion would have been one for surprise and gratification. One fact stands out clearly: The measure as passed is intended solely to provide an emergency currency; it is not offered as an ultimate solution of the problem, that being the work which the Currency Commission must undertake. Yet, even as an emergency measure, it seems to sit uneasily in particular outside of the Republican party machine. When a measure goes through the mill of successful legislation by all shades of financial opinion, and opinion that is not financial at all, and is finally enacted for political reasons, it would be astonishing if the measure should retain much definite character or much of its original merit, however small that may have been.

During practically the whole of the session of Congress just ended, two main conceptions of what should be done have been entertained and battled for by the serious-minded. The first in point of definite presentation in Congress was the idea of providing merely a currency suitable to an emergency like that of last fall, leaving present currency conditions as little disturbed as possible, and leaving to the future the real solution of the problem of providing a thoroughly sound currency system. The second conception developed the theory that the lessons of last fall's panic, and the great public interest taken in the question of currency reform at the present time, afforded a favorable opportunity to inaugurate, not make-shifts for today or to-morrow, but a comprehensive currency system that should be efficient for all time.

This comprehensive system requires as close an approximation as possible to a currency that would expand and contract automatically with the varying needs of business, that would be based not upon government or any other specific bonds, but upon the general assets of national banks. These assets consist in the main of commercial paper, which represents goods and products in process of conversion. As a matter of theory at least, an automatically elastic currency should be one in the operation of which every bank would be anxious to keep its own notes outstanding and would retire the notes of its competitors as fast

as they came in. Such a theory demands freedom of both issue and redemption, and the question of a tax on circulation to assure contraction becomes of minor importance. In Canada this kind of automatically elastic currency has gone beyond the realm of theory and has become an actuality.

One great trouble with our banking system, as has been very specifically pointed out by Mr. Paul M. Warburg, is its decentralization. Every bank has its own row, except in times of panic, when the banks of the larger cities find voluntary concerted action, through clearing-house associations, absolutely essential to their continued existence. They even find it necessary, in such emergencies, to perform a constitutionally illegal function by issuing a kind of currency in the shape of clearing-house certificates. These voluntary associations and their methods of supplying panic point out clearly the need of a central bank with extensive powers, especially of note issue, which should safeguard the interests not only of the banks themselves, but of the business community. To meet the prejudice existing in this country against a central bank, Mr. Warburg has suggested a "central clearing-house association," but he would eliminate such an association with all of the essential powers of a central bank.

That there are very practical difficulties in the way of securing an automatically elastic currency must be admitted. The first of these difficulties is found in the fact that our present national bank notes are based upon government bonds as security. This is a currency which grew out of the necessity created by the Civil War for bolstering up the national credit by providing a market for government bonds. Aside from the practical difficulties involved in a total change in the basis of our currency, a great many people would never be willing, as a result of forty years' trial of bond-backed bank notes, that no other kind is safe.

The course of the discussion in Congress therefore partook of the character of a struggle between the advocates of a radical change in our present system and those who desire to perpetuate the present system for convenience's sake. The latter won the victory to the emergency currency element, although it bears evidences of apparent compromise to the advocates of asset currency. The original Aldrich bill provided for an emergency currency of \$250,000,000; the present law provides for a limit of \$100,000,000. The central bank of the country, however, could be used as security. In the law as enacted they have been dropped. The new law provides that currency may be taken out on the security of State, county, and municipal bonds to the extent of ninety per cent. of their value, and the circulation is to be based at the rate of five per cent. the first month it is outstanding, rising one per cent. a month to ten per cent. Obviously, while here is a method of issuing additional currency in times of dire distress, the tax on the new circulation makes it practically prohibitive. As to the provision for emergency currency based upon commercial paper, it is little short of trivial. Such notes are to be issued by "national currency associations" to consist of banks, ten in number, with combined capital and surplus of \$500,000,000, and the circulation is to be issued only to banks already having outstanding notes based on government bonds (issued in forty per cent. of their capital stock). In order to avail themselves of the privilege of issuing this "asset currency," the banks must first organize as "national currency associations" along the lines of the law instead of along the natural lines marked out by the desire to organize a community of banks, with directors, officers, directors, executive committees, etc., and must submit the security for each proposed issue of notes to the Comptroller of the Currency and the Secretary of the Treasury for their approval. In addition, the associations and their members would have a special liability to the government and would labor under other deterrents.

It, as is highly improbable, such associations should be formed for the sole purpose of using this dilatory method of securing currency at the rare intervals when it would be needed, the emergency to meet which the notes are intended might pass before they were issued. It is conceivable that a situation might arise in which the power to issue currency against State, county, and municipal bonds would be of service; but the emergency would have to be a grave one, for at all other times the banks would lose money by taking out circulation. Without the restrictions imposed by the law, it would be an inflation machine pure and simple; with these restrictions, its effectiveness is lost in a hopeless abyss.

There is probably just one direction in which the course of events leading up to the enactment of the law will prove to be of tremendous value. Public opinion has received a great deal of enlightenment on the whole question of currency reform. Senator La Follette, by his filibustering tactics, performed the best public service of his political career in helping to rivet attention on the currency problem. The cause of reform has not been advanced by the new law (but in all probability it has made great progress) through wide-spread discussion, during the past six months, of plans for asset currency and a central bank of issue. Thereby the task of the new currency commission should have been made the lighter.

For the Kingdom of California

THE TRUE STORY OF SAN FRANCISCO'S CIVIL WAR BETWEEN THE GRAFTERS AND THE ELABORATE FORCES OF THE PROSECUTION

IV.—THE COLLAPSE OF THE PROSECUTION

By WILLIAM INGLIS

WHAT has the San Francisco graft prosecution accomplished? Begin with lavish promises that it would rid the city of grafters and threats to "get" the corporation men, contained amid great clamor of praise for nearly two years before the eyes of a sympathetic public, what are the concrete results of the movement?

1. Eugene Schmitz, Mayor of San Francisco, and nominal head of the administration of grafting officials, was forced out of office and put on trial for bribery. He was convicted of bribery, but the judgment was reversed by the courts of appeal, all the judges agreeing, on the ground that the indictment was fatally incompetent and did not allege any legal offense. Schmitz is at large on bail, but it is very doubtful, as Prosecutor Hickey has admitted to this writer, whether he can be convicted hereafter.

2. Alio Ruel, shrewd, rich lawyer, the heart and brain of the graft machine, although not an officeholder, is still in prison awaiting trial under a cloud of indictments and bail of nearly \$1,000,000. He has been cast down from his throne, and his political machine has been shattered beyond hope of repair. As for the possibility of convicting him of any crime, that question is but answered by considering the result of his trial for bribery concluded a few days ago—a disagreement of the jury, with eight jurors voting to acquit Ruel because they could not believe the testimony of the self-confessed grafting supervisors.

3. The eighteen grafting supervisors, who cynically enjoyed their villagery and in return received complete immunity from prosecution, are now out of office, although they were retained in power for three months by the prosecutors. They still have their bribes—as witness the grotesque, pathetic, and vain offer of him a few weeks ago, to surrender his bribe money if he could find any one to take it. Every confessed hoodler is, of course, immune from prosecution.

4. The "getting" of corporation officials? Not one has been convicted of any offense, nor has even a *prima facie* case been made out against any of them. Several of the tallest men of corporation officials have been dismissed, General Lacey L. Ford, counsel for the United Railroads, has been twice triumphantly acquitted. Messrs. Mulhally and Abbott, of the same company, have been pronounced innocent by Prosecutor Wilson in open court, and although President Patrick Calhoun of the company, has fought for a year to have his case brought to trial the prosecution has abandoned the case.

To sum up—the grafters are out of office but free, their organizer and master is still in disgrace but likely to go free, and the corporation officials, accused when the Herald as-

saults of the prosecution have been delivered, are finally exempt from danger of imprisonment at a cost of millions of dollars and the beloning of their good names. They have bought and won, but truly at a price that staggers humanity.

In so far as conditions that prevailed in San Francisco exist in all American cities, it is of vital interest to every American to examine the causes of the present plight of the graft prosecution, to determine, if possible, why after two years of effort it has failed to punish the guilty and has come seemingly to the end of its effectiveness. The prosecutors—Rudolph Spreckels, James D. Phelan, and Francis A. Hickey, who took control of the district attorney and his office—declare that all San Francisco has been deluged by corporate wealth; that citizens have turned their backs upon the graft prosecution because they believe it "hurts business." The corporation officials, on the other hand, affirm that the prosecution has failed because it was disingenuous and selfish from the beginning; that a combination of well-wishes scorned the State's prosecuting power and used it as a weapon to disgrace and imprison them, and in the resultant crash of their companies buy their properties cheap. Thus the prosecutors vehemently deny.

Let us consider the reveal extraordinary factors to counter Al-

lio Ruel of bribery. Surely in his case there was no lack of popular enthusiasm for the prosecution. During my six weeks' stay in San Francisco sixty-one out of every hundred men with whom I talked were bitter against Ruel. The general sentiment of the community toward this man was expressed by a prominent business man not affiliated with either the prosecution or the defense, who not long ago said to me: "No matter what happens, you must admit that the prosecution has done a great deal of good. They have got rid of Schmitz and the gang of grafting supervisors, and as for Ruel, they'll send him over the bay soon." The State's prison, I may remark, is over the bay.

Now, why did the jury, by a vote of eight to four, refuse to send Ruel over the bay, although urged to do so by eager prosecutors backed by overwhelming popular feeling? Surely that must have been a great obstacle which prevented these eight men under their oaths as jurors from gratifying the wish of the people. It was a great obstacle—the testimony of the very grafting supervisors with whom the prosecution struck a bargain at the beginning of the crusade. These men testified in effect that Alio Ruel had not only given them bribes for their votes on public measures, but had promised them an advance to pay them certain specific sums as bribes for their votes on these measures—a *c.* grafting franchise, etc., to corporations. The self-confessed grafters told their stories glibly, and the future looked black for Alio Ruel. But the defense put in evidence the statements of these same supervisors had made on their march

Patrick Calhoun, President of the United Railroads

"I HAVE NEVER, DIRECTLY OR INDIRECTLY, GIVEN ANY OF MY ASSENTED TO BRIBERY OR HAD KNOWLEDGE OF BRIBERY"

Tully L. Ford

FORMER ATTORNEY GENERAL,
THREE TIMES AND VINDICATED
OF THE CHARGE OF BRIBERY

Under the circumstances the eight jurors refused to believe any of the witnesses' stories, and thus Ruel had escaped through his attorneys' excess of zeal.

Let us now consider the course of the prosecution toward the corporation officials accused of bribing the supervisors.

"Why did not these corporate men come to us, as we begged them to? Why did not Mr. Speckels and Mr. Henry separately and to me?—We would have accepted their evidence against the supervisors. We had to use one side to prosecute the other."

This had a convincing sound. I got the best answer to the question from Patrick Calhoun.

"I can answer with positive knowledge only for the United Railroads," he said, "but I am informed and I believe that the other corporation officials stood as we stood. For myself I answer that I have never, directly or indirectly, bribed any one or conspired to bribery or had knowledge of bribery. An emissary spoke to me—once—with the suggestion that the graft prosecution intended to invite me to confess. I told him that it would not be healthy for any man to come to me with any such proposition. That was the end of that."

Did the prosecution begin operations with the fixed purpose of overthrowing the corporate men, no matter how many known grafters should go free? Let us look at the facts. Mr. Henry in public addresses at Berkeley, at Stanford, and in San Francisco declared that he would "get" the corporation men quite as often as he boasted that he would punish Abe Ruel. Yet as soon as Detective Burns had trapped a few grafting supervisors and scared them so that the whisperer of the park, "Big Jim" Gallagher, met Rudolph Spreckels by appointment at the Presidio by night, Mr. Spreckels offered immunity and protection to all the grafting supervisors and to Abe Ruel himself.

In the first Ford trial, when Gallagher (the prosecution's principal witness) was asked whether he had demanded immunity for Ruel, he replied: "No. It was not necessary. Mr. Spreckels had offered immunity to Ruel." Gallagher stated that Mr. Spreckels had said to him at the Presidio that he had no vindictiveness against the supervisors, no vindictiveness against political bosses, but that important purposes were to be served by getting after the public service corporations.

"Mr. Spreckels," Gallagher testified, "said: 'Supervisors may come and go, political bosses may come and go, but the public-service corporations will remain, and they are a source of political corruption.'"

Upon the last trial of General Ford, Gallagher testified that Mayor Schmitz had been induced to offer immunity made by Mr. Spreckels at the Presidio. So here we find at the very beginning of the graft prosecution the prosecutor acting upon the theory that all the leading supervisors, as well as Ruel and Mayor Schmitz, might go free if only they could "get" the corporation officials.

Why was this?

For the cause of civic purity and reform—say the prosecutors.

For private aggrandizement and rich plunder—say the corporation men.

What was the state of Ruel's political-grafting organization at the time of the alleged acts of bribery? We have already seen that Ruel had captured the Labor Union party by an alliance with Schmitz and that the men he raised from obscurity to be supervisors were subservient to him. They obeyed his slightest word and command—"look your man," as the jargon phrase has it. Having created this gang, Ruel was forced to feed it lest it turn upon him as the monster turned upon Frankenstein. There was truth in his plaint. "They were so hungry they'd eat the paint off a house." But there is nothing in the history of the gang and its master to suggest that Ruel and his supervisors were ever partners, or that they conspired and planned out graft in advance, or that he ever said: "I shall get so much money for this franchise, out of which I shall divide so much among you." He bunted with the pack, but he never conspired with its members. Indeed, it is of record that in at least one case he made the supervisors vote against

a franchise for which they had already been bribed. This was when the hungry ones broke restraint and did a little grafting on their own account. The master demonstrated his power by whipping them back to heel and forcing them to kill the franchise they had been bribed to favor. At that time, too, Ruel was eager to be seated in the United States Senate. As it likely that one in his position, with his ambition and wielding his power, would ruin his political machine by making himself a partner in the crime of bribery with the very men he already controlled so abjectly? That he paid graft money to the pack is certain; that he conspired in bribery seems most unlikely.

All of this is corroborative of Ruel's oft repeated denial that he ever committed bribery. From the beginning of his confession, when he "came through" under promise of immunity after long torture by his captors, and told of his misdeeds, up to the present time, Ruel has always insisted that he did not commit bribery. Note his affidavit filed in the Superior Court on March 29 last, in which he states under oath:

"Neither Tully L. Ford nor Patrick Calhoun ever spoke to this affiant about or told this affiant about or told this affiant that they or either of them expected him to bribe, give, pay, or offer to pay, or promised to pay any money to any public official or supervisor, and this affiant so told the said Henry, Langdon, and Burns; and this affiant has never stated to the contrary, and the same was and is the truth."

But the prosecution, which had given immunity to the confessed grafters and made an immunity contract with Ruel in order to "get the higher-ups," was dissatisfied with Ruel's story. They insisted upon his giving evidence that would convict corporation men of bribery. As Ruel in the affidavit already quoted pictures the situation:

"That, notwithstanding this affiant's repeated assertions to the said Burns, in answer to the said demands of the said Burns for such testimony from this affiant, the said Burns made repeated requests and demands of this affiant that he should change his statement so that this affiant's statement would incriminate the said Ford and Calhoun, and said Burns did repeatedly in the month of September, 1907, say to this affiant, when alone with this affiant, and frequently in the presence of the Reverend Bernard M. Kaplan, in substance and effect, that the prosecution demanded of this affiant testimony which would convict Ford and Calhoun, and did state in the presence of said Kaplan to this affiant that the statements of this affiant, if repeated to a trial jury, instead of convicting would acquit said Ford and said Calhoun, and did further state in the said month of September to this affiant that the prosecution was not giving affiant complete immunity for nothing."

"Affiant repeatedly, and as often as asked, and as often as threatened, did say to the said Burns and to the said Langdon and Henry, and said to them frequently in the presence of Dr. Kaplan, notwithstanding the presence of Dr. Nieto, in the month of September, 1907, that this affiant had told the truth concerning all conversations had by affiant with Patrick Calhoun and Tully L. Ford concerning the said matter, and further stated that what the prosecution demanded of affiant in reference to the said matters concerning said Ford and Calhoun was absolutely untrue, and the affiant asserts that they were and are untrue; and this affiant further states that he frequently stated to said Burns and said Henry and said Langdon that he could not and would not change his statements or testify to conform to the views of the prosecution with regard thereto, and that to do so would be to commit perjury, and that this affiant would not so do."

"That thereupon and repeatedly the said Burns did state to me that the prosecution desired the truth, but also added that the truth was as the prosecution had stated the matter, and that if I did not change my statement and testify to conform to what was stated was the truth I could not hope for favors from the prosecution."

"When said Burns, after many efforts, found that I would not testify as demanded, he was at first extremely angry, or apparently so, and eventually stated to me that if I would say, when called as a witness in the Ford trial, that Ford paid me money to 'put the matter through the Board of Supervisors' Mr. Henry would be satisfied."

"Mr. Burns also stated to me that there was not very much strain in that language, and that I could safely say that, and it would please Mr. Henry and the prosecution, and be to my great interest in carrying out promptly and effectively the entire immunity contract; and I am also informed and verify believe that Mr. Henry and Mr. Henry made practically the same statement to Drs. Nieto and Kaplan. My reason for the belief is that

William M. Abbott
OF THE UNITED RAILROADS,
WHO IS UNDER IMPEACHMENT
ON UNSTAINED CHARGES
OF BRIBERY

they both spoke to me about the matter, and I told Burns, and I told the Reverend Dr. Kaplan, and I told the Reverend Dr. Kisto, and I told Burns in their presence, that I would not change my statement from the truth to a falsehood, and that I would not swear to a lie to convict any one, no matter what the result might be to myself, and would not testify as the prosecution demanded. These conversations occurred in September, 1907.

"That after I had revised all this and I was being pressed again and again and told Burns and Dr. Kaplan that no such statements were ever made by Mr. Ford or Mr. Calhoun to me as suggested by Mr. Burns, Mr. Henry, and Mr. Langdon, I was asked by Burns whether I would not testify in effect 'that I thought that Ford understood that money would be given to the Board of Supervisors to pass the trolley franchise,' and I responded that even if I were willing so to testify, such evidence would not be permissible, as I would not be allowed to testify as to what anybody might think, or might have thought, or might have understood."

I should not have quoted Ruel's affidavit at such length if he were not corroborated by so many material facts in the history of this amazing prosecution. It is not to be expected that a man of Ruel's character will be believed on his mere unsupported assertion. Consider, then, this vital fact—Ruel would be a free man to-day if he had changed his testimony so as to accuse Messrs. Calhoun and Ford of bribery. The prosecution offered him at the very inception of the crusade complete immunity in return for a complete confession of his misdeeds. This offer was crystallized in the famous immunity contract, duly signed, sealed, and delivered. Thus, the terms of the contract specifically excluded Case 205 from the immunity, but that was one of the French restaurant cases and the indictment therein was long ago settled by the judgment in the Schmitz case.

It seems to me quite clear that the prosecution must have had grave reason both for making the Ruel immunity contract and for keeping it hidden from May 8, 1907, until January 16, 1908. What was that reason?

"The prosecution," says Patrick Calhoun, "exhausted every means of having Ruel to accuse us of bribery. They resented that their immunity bargain with him must be kept secret until they should actually produce him on the witness stand and there have him accuse all of us of bribery. That was to be the master stroke of their whole campaign. Whatever may be said of Ruel, it cannot be denied that he has stuck to the truth at great cost to himself. They threatened him with lifelong imprisonment if he would not accuse us of bribery; they tried in every way to break his resistance. He replied: 'I have already told you the whole truth, and I will not commit perjury to oblige you. I'd rather not see thousands of years in prison.' Nevertheless they still continued their efforts to make him 'come through,' and it was only when the rabble threatened to publish the immunity contract that District Attorney Langdon was forced to give the contract to the newspapers. The prosecutors have been defending them-

selves ever since, trying to explain: first, why they made the secret immunity contract with Ruel, and, secondly, why they were forced to repudiate it."

I repeated this utterance to Rudolph Spreckels. "It is not true," he replied. "No one has attempted to force Ruel to commit perjury. We would not tolerate that for a moment. When he 'came through' with his confession we made the contract with him promising money in return for the truth. He has actually told the truth in part, but we believe he has lied about his relations with the corporation officials. In that lying Ruel violated his contract and that ended it."

Mr. Henry was equally emphatic in his denial. "I never believed we could trust Ruel," he said to me. "Ruel made a contract to tell the truth, told part of the truth and held back the rest. By refusing to admit that the corporation officials had bribed him he lied. That terminated the contract. He has always been a liar, tricky, and evasive. I never trusted him."

What shall an unprejudiced mind believe concerning the relations between Messrs. Spreckels, Henry, and Langdon on the one hand, and Ruel and his grafting supervisors on the other? At the outset of the campaign of civic reform and graft prosecution the crusaders proclaimed that they would send all the guilty men to prison—big of them, great and small. At that very time they made an alliance with the entire gang of grafting supervisors, giving them immunity and continuance in power in exchange for their testimony. Then came the arrangement with Ruel, resulting in his confession and the immunity contract.

What followed? The same "good dogs" who "took programme" from Ruel made a remarkable and important change in their testimony. In their first confession, when questioned by Mr. Henry, with the memory of their criminal acts still hot in their minds, they swore that Ruel had given them money after they had voted for franchises. One year later, upon the trial of Ruel, they add to their first story by saying that Ruel had promised in advance to pay them for their votes. Why did these "good dogs" from "Big Jim" Gallagher down, make so vital a change in their testimony? Wasn't it because they are still "good dogs"?

These grafting supervisors were not believed by the jury even in their testimony against the much-hated Ruel. Yet they are all free, all still possessed of the bribe money. Is not the observer bound to believe that if Ruel had similarly come through," he, too, would be now enjoying the immunity guaranteed by the prosecution?

And what is the conclusion of the whole matter? Messrs. Spreckels, Peelan, and Henry directed all their efforts to convicting corporation officials of bribery. They entered into an alliance with the known grafters in an effort to bring about these convictions. The grafters in their eagerness to be "good dogs" added to their original testimony and so defeated the plan. There seems to be at this moment no hope of ever sending any of the San Francisco hoodlums to prison for their crimes.

The Fleet entering the Golden Gate—the Ships, in Line of Approach, are the "Connecticut," "Kansas," "Vermont," "Louisiana," "Georgia," "New Jersey," and "Rhode Island."

The End of the Voyage

By ROBERT DUNN

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

AMONG THE U. S. BATTLESHIPS—"RANGE 1000." But so far Francisco.

It is not easy to be sailed and enthusiasm, weary and ardent, all at the same time. As our combined Atlantic and Pacific squadrons, twenty-six ships of the line, the biggest naval pageant the western hemisphere has ever seen, anchored off Market Street yesterday, the sentiment of our quarterdeck was this: "Why didn't we stop here first, right after leaving Hampton Roads? Think how keen we'd have been for this occasion. For the two weeks' jubilee San Francisco has cooked up for us ashore! But when you're being fangarded under four flags, in an many ways—"

Yes, indeed. All the way up this Pacific coast it was hard to be continuously excited, to return its hospitality and enthusiasm in all the profusion with which it was offered. Could any one expect that? O that some arctic would celebrate the urbanity and social endurance of the American naval officer through night after night of dance and dinner, day after day of barbecue and motor ride! His flag to grace the functions; he is ordered to. One in our wardroom became so drab as Los Angeles that he went to bed one morning at ten o'clock. We hang a black cravat of symbolic grace on his door. "I suppose," said a stray, lined visitor to the wardroom country, "he feels bad over that sailor I read about who died on the *Georgia* yesterday?" Yes, indeed. But be chiefly mourned himself, shot through this glad-land festival, like the lady who used to emerge from the ruman at an old-fashioned circus.

Thus we crept up the coast, and the darkness leached with bonfire ashore, and faintly twinkled the whitish glitter of those resorts on the famed San Francisco "beach." The eyes of the light ships stared at our rumbling anchor-chains. Thus we rested in the wings and behind the array, ready for the greatest "first night"—or rather matinee—the Pacific coast has ever known. Behind the scenes is still always the most thrilling place to be. We had been there for four months, and the seven-oilbert guests were too familiar to palpitate our hearts. The patriotic crowds assembling ashore might have thought so different that night, as from our "round-the-flora standpoint" we pondered whether our various physicians could stand the two weeks' pace of San Francisco hospitality.

All the morning a shifty fog swam through us, the fog that makes dim things black, and black things dazzling when a rift comes. The torpedo boats clustered about the little scarlet light-ship just outside our line of anchorage, and beyond them craning the two new-comers, the *Albatross* and the *Albatross*. Friendly they seemed, and yet presumptuous among us veterans of the 14,000 miles, flying the only Yankee ensigns beside our own which we had seen during the long hike, except when the *Chaco* stole past us like a ghost in the haze off Chile. The *Albatross* is sister to the *Albatross*, the *Albatross* to ourselves.

Sometimes you might have observed the Golden Gate, a flatfish gap under the light clouds. But at eleven o'clock, when laughter curved the quarterdeck into fresh sailmakers, the wind was blowing the fog into billows, letting down auriferous shafts and sunlight. The curtain over the Gate lifted a definite space, so you could see the glassed-in buildings by the wall marks, and the cliffs and grassy gullies of the steep north portal. Our three-mile line had run past the entrance, heading south. Every one faced it as we swung with the tide, so that as far as entering the bay went, each ship individually, and the fleet as a whole, could not have more squarely turned backs upon San Francisco. All had to pivot completely about, and the *Connecticut* then led the whole line in a hair-pin turn westward. Thus, as she signalled to get underway

at right angles, which promptly was changed to ten, aimed the familiar apparent-but-not-real confusion of clearing, backing screws; threatened "walking-astern" of ship upon ship, as all-appeared coasts busily moved up and down their yards.

To us, sailed with such routine, the strange ships gave the sole novel element, as the First Division swung in perfectly behind the flag-ships. The *Albatross* was to butt into the column right behind the *Albatross*. The quarterdeck regarded this as almost an impertinence. Why, she had never even seen a *Patagonian gusher*! An interloper, indeed. "She'll make a mess of keeping distance," said a midshipman. "She's too used to travelling single column. Why should she be let in to spoil the line? I don't believe aboard her they even know it's a courtmartial offence to turn in too quickly. This implied no real cynicism; it was just our aroused-the-flora old seadog point of view. And as we all swung on toward the white light-house by the cove where the *Alto de Janeiro* went down, nothing remained but to jump the specter for having apparently non-regulation speed-ones—they seemed too thin and pointed—and to flatter the *Albatross's* modesty for falling in behind the *Albatross*, at the tip end of everything.

Thus we ploughed on with funnels belching blackness straight upward, and evenly as a wind-break of gum-trees. The torpedo "spit-kits" rolled to port. We seemed to pry the cloud blanket apart from the Gate. There were the two leadmen up forward, twirling their weights in great arcs and leaning far forward on the throne; blurrackets skyarking on the leeward; the tide in the narrow beginning to zigzag the great column the least bit now and then; and circular Fort Scott growing from a trail-box into a sizable drum. Far inside a heliograph kept flashing from some merchantman among the smoky forestry of shipping.

Here again! The climax of the cruise in the Pacific. I am afraid that many of us missed any very poignant sense of anxiety and patriotic pride. Travelling so long and so far, goals become insensible certainties. Sailorsmen are gentle and irresponsible in port quite naturally. For once we felt that we ourselves were quite unmovable. Those we now began to see clustered in the outer portals of the Gate possessed the eyes and the hearts that we desired. Their sense of our sight, their faith in our power in prefer from future enemies, their vague awe of the sea, and fascination in our potency of steel—all that was movable. We wanted to grasp the impulse, just as they had felt it, which had brought them out ponder by the hundred thousand, in human hordes on the streets, in scattered ranks where the roads wound upward. Flies, like flies, I suppose, he simile occurred to half our 16,000 men. I heard a down lips mutter it, from officer down to stoker.

The Sausalito ferriesbats stopped in their tracks, even they, for Sausalito is the lighthouse of San Francisco. When our thread-line of ships stood into the eye of the Gate at a quarter to one o'clock, Forts Mason and Baker on either hand uprised saluting powder and boom. An officer said, "Well! That's the first time I've ever heard an *American* fort salute *American* battle-bats." Shipping and factories turned on all their whistles, and we sighted the four-funnelled cruiser squadron behind Angel Island; watched it slowly moved and attach itself to us like a tail—and noted grossly how much better "distance" we kept, hoping that the flies upon the docks and buildings observed that also. As we passed grim Alcatraz, there was the old *Fort* to be recognized, at which some other officers rectified national history at first hand. There were revenue cutters to pick out and name as we passed grim Alcatraz, and young "way beyond the green Ferry Building before turning back again upon the city. From some pier a sailboat shot upward, vanished twice in the clouds, where its Dunsford Dick opened his white parachute—aimed for the aft funnel of the *Kearsarge*, and almost hit it.

Bullshots. Pretty metaphor. Every sailorman has been on a fairly continuous suspension ever since.

The Monarchical Manners of the White House

By DAVID F. SINCLAIR

ILLUSTRATED BY ALBERT LEVERING

MR. ROOSEVELT has been called a President with a republican imagination guided by the monarchical instinct. In this respect he is a character distinctly new in the history of our Federal-Republican system of government. We have had two, perhaps three Presidents with a decidedly monarchical temperament, but the present occupant of the White House is the only incumbent that has evinced a passion for perpetrating and ruling his fellow citizens. In his pre-Presidential policies the President had shown the instinct and will of a monarch without a monarch's manners and display. But since Mr. Roosevelt became President there have been witnessed behind the White House doors an exclusiveness, a rigor of etiquette, and a display of swords and gold braid such as no one of his predecessors ever dreamed of. The atmosphere of the White House has been more like that of Buckingham Palace three half dozen years than like its former air. No President ever made so many changes for the purpose of putting up the bars against the general public. No President has ever been so rigid in the selection of those who should grace official and social functions. No President has ever shut the doors of this public mansion so tight in the face of the press. And certainly no President has gone so far in imitation of foreign courts in the reception of foreign ambassadors.

The White House is the heart of the government. In it dwells the personality of the government, and around it have centered the imagination, emotions, and affections of the Republic. The President and his family, living in full view of the entire country, have ever been a mould of decency, simplicity, and democracy for every other family in the land; and to that host the people owe as much their sense of equality and love of family and home as to

the acts of Congress. The open doors of the White House, its democratic informality, and the absence of addlers from its corridors for more than a century have astonished every foreign traveler and observer.

The first five Presidents to live in the White House were born aristocrats. Jefferson, Madison, and Monroe lived like English squires on their Virginia plantations. The two Adamses in the line of New England scholars. But in the White House these men were each and all democrats, accessible to the humblest citizen on terms of equality. Andrew Jackson made the White House so free and open that his aristocratic enemies charged him with vulgarizing it. Mr. Lincoln would invite into the White House the basest deserter from the army, to hear his plea for life. Grant, Hayes, and even the fastidious Arthur were always good mixers with the great democratic throngs that invaded the White House. Mr. Cleveland was never more pleased than when he was shaking hands with the tri-weekly crumblers in the East Room. McKinley's frail wife sat at his side for hours to greet the American people who went to pay their respects.

In desire of the changed relations between the White House and the general public during the last few years, some of the President's intimate personal friends have urged that his time is too valuable to permit much of it to be spent in the shaking of hands with promiscuous crowds, and in receiving those who have no business but to pay their respects. It has been urged that the President's duties are very like those of a great railroad president, who would never think of holding in his office levees or crashes of the public that patronizes his road. In Mr. Roosevelt's first term he discontinued the great tri-weekly crashes in the East Room. There has never been anything in history quite like these Presidential receptions.

The East room of the White House has always been the one apartment open to every well-behaved person in the world. It has been as free as the sidewalks of Venice's St. Mark's Square, and to behold the chief citizens of the Republic take his place at the head of the line here was always an inspiration, and actually worth more to the country than any hour he could spend in examining the records of applicants for post-offices, internal revenue offices, and judgeships. Tens of thousands of plain people have glanced into the face of the "Old Hickory," into the kind eyes of the Great Emancipator, and at the first countenance of Grover Cleveland in this historic room.

Mr. Roosevelt has greatly reduced the number of public receptions, and has confined them to the circular Blue Parlor, a very much smaller apartment than the East Room. The Blue Parlor is a semi-private apartment, and the public is never admitted to it promiscuously. Visitors at all these Blue Parlor receptions are present by selection and invitation only. The New Year reception is a grand crash of four or five thousand persons who file past the President and his receiving party and choose guests. The atmosphere and arrangement of this reception are royal and not democratic under the present regime. The receptions are announced by the fanfare of trumpets, blown by soldiers, in imitation of royal heralds. The President takes his place, with Mrs. Roosevelt and the ladies of the cabinet at his side,

Reporters caught loitering were to be arrested

all flanked by a staff of military aides in brilliant uniforms, with jeweled sword hilts. After Mr. Roosevelt's triumphant election in 1904 these military aides were increased to nine young men, most of them the sons of distinguished military heroes, such as Grant, Lee, and Sheridan. On account of criticism in the press, this military staff has been gradually reduced, but at the recent New Year's reception there were more soldiers in the White House than during any previous régime, except in war time.

This military staff is, of course, purely for social and decorative purposes, and it corresponds in manner, if not in degree, to the military functions of the Emperor of the Japanese. The marshal, the colonel who presents the people to the President, belongs to the staff of army engineers. He is a sort of Lord Chamberlain of the White House. When the soldier Grant was President the public were presented to him by a citizen in plain clothes, the Marshal of the District of Columbia. Although Hayes, Cleveland, Harrison, and McKinley all employed a colonel of engineers to officiate at their receptions, there never were more than two men present in gold braid, with swords at their sides.

Visualize for a moment one of Mr. Roosevelt's New Year levees in the Blue Parlor. A long line of people—men and women in full dress—after much waiting in the White House corridors and the East Room enter the Presence, and, passing between two silk curtains, approach the President and the group of ladies, soldiers, and diplomats in brilliant uniforms, set off by the black coats of cabinet ministers. Facing the President and Mrs. Roosevelt, on the opposite side of the silk cord, is a group of specially invited guests, an assembly of more or less distinguished persons who are present to see the crowd, and especially to lend dignity to the chief figure in the setting. In former times these spectators were grouped in the background behind the President and his wife, but Mr. Roosevelt, by grouping them opposite, and placing along the moving line of visitors his military aides in great numbers, has increased the brilliancy of the levee and concentrated the attention of all upon the presentation of the visitors. There is, however, a noticeable awkwardness in these military satellites of the throne that one will never see at a court reception in Europe. The independent, self-respecting American, though he be a soldier, cannot easily lend himself to gracing an official function that savors of royalty.

The President gives three or four state banquets annually. These banquets have, as a rule, been dull, artificial ceremonies. They are too big for general conversation, and the President of the United States being the host under his own official roof, speechmaking, toasting, and free general conversation are out of place. Therefore diplomats, Supreme Court judges, soldiers, and members of Congress sit down at the President's table in silence, or converse as best they can with their fellow neighbors. It has always puzzled the White House how to arrange and to conduct these banquets of fifty or more people so as to make them entertaining. Old Andrew Jackson would lead with a song, in which all present would join. Lincoln told stories that would convince his guests, but there has been no President who, like Gladstone, could talk for two straight hours into the ears and ears of a half hundred distinguished men and women and have them follow him with breathless interest.

Mr. Roosevelt adopted the plan of inviting distinguished persons outside official life to these banquets in order to enhance their interest and charm. But no sooner was this new step taken than the White House became a social arbiter. For instance, at a dinner given to the Supreme Court there would be present individuals of a class never before present on such an occasion. Thus the Roosevelt régime has widened the scope of the White House social center. The President has also insisted upon a rigor of etiquette at these banquets that none of his predecessors ever strictly observed. He and his guests are greeted to the banquet hall by the military aides. The guests are both seated and served after the President. The chief signature of this custom lies in the emphasis that is placed on it.

The social arbiter has ruled in the White House with an iron hand during the past few years. Early in the present régime it became whispered abroad that the custom was to be no longer welcome at the White House. There was no place there for so many of these plain, decent, but obscure people who used to go to those delightful afternoon receptions and teas of Mrs. Cleveland. But the White House has never been so brilliant with receptions, musicals, and dances, and there has never been seen so much of that small element in our democracy that is called "society." The social restrictions of the White House have, of course, considerably affected social life in all official circles in Washington, especially in the cabinet. The President of the United States is by the long traditional etiquette of his office prohibited from dining out, except in the houses of his cabinet ministers. Mr. Roosevelt's scruples were at the core of King Edward the list of persons whom he will allow to dine in his company when he is a guest.

The old invitation to the White House has in effect become a royal summons to the White House, not only to politicians, but even to railroad presidents and churchmen. There has been a mighty change since the day when Mrs. Lincoln prepared in least and the President invited a number of friends to dine with General Grant. The hero of Appomattox slipped out of Washington,

and the President graciously laughed over his absence. Senator Platt refused to go to the White House on the invitation of President McKinley on account of "a previous engagement." But any one who fails to go to the White House now on a summons must show a doctor's certificate. Two or three winters ago there was a banquet at the White House at which one of the ladies invited failed to appear. A summons was sent to a noted Washington society belle. She was entertaining her fiancé at dinner, and refused to leave her own table; but her mother prevailed upon her to go. On another occasion a woman—a guest of honor at a dinner that was being given at one of the embassies—was summoned from the table to take the place of an absentee at the White House. Her husband, a proud companion, protested that her dinner party should not be thus broken up, but here the diplomatic wisdom of an ambassador prevailed. In his own country he knew what it meant to have a royal order.

A White House wedding is an event of which the American people most naturally demand the fullest details, yet at the latest one reporters for more than one of the most important newspapers in the country were hampered and needlessly offended by social secretaries. A very capable and highly respected woman reporter for a Washington paper was made to leave the White House because she respectfully complained of being put in a position where she could not see what was going on. The officer against her was glancing that she was instantly employed as a social secretary by the wife of the Vice-President of the United States. And there can be no doubt of the celebrated order that reporters caught loitering about the White House after certain hours of daylight were to be

Anyone who fails must show a doctor's certificate

arrested. The order was almost immediately toned down in one of "more on," and then abolished, but it was a straw in the wind. The White House has demanded, in effect, that its current social history shall or shall not be published according to its own decree, and whatever is published shall be as it is given out at its source.

Mr. Roosevelt's manner of receiving ambassadors is a radical innovation. It used to be that a representative of a foreign country in Washington would, on the day appointed for him to present his credentials to the President, enter his own carriage at his embassy or legation and drive to the State Department, where he would be met by the Secretary of State and taken to the White House. Very soon after Sir Mortimer Durand, the first British ambassador to be received by President Roosevelt, arrived in Washington, the President's own private carriage, containing one of his military aides, Colonel Sargent, called at the embassy and conveyed Sir Mortimer to the White House, where he was met by Secretary Hay and taken to the Blue Parlor for the presentation of his credentials to the President. This innovation on its face would seem to be of no very great importance, but it was. It was an indication, to some extent, of the manner that most monarchs employ in receiving foreign representatives, and a violation of the custom as well as the spirit of our republican institutions, which forbids the President to leave his official residence to meet princes, or send his coach to receive foreign ambassadors. An ambassador to the United States enters the government and people of the United States through their Chief Executive, and not upon a personal mission to the President as he does to Emperor William or to the Czar. But Mr. Roosevelt's manner of receiving ambassadors indicates that they do come to be met by the person of the President himself, and the speeches made by Mr. Roosevelt on some of these occasions contain even more pronouns of the first person than he usually employs.

The atmosphere of the White House, once democratic and free, has become tainted with the manners of monarchy. Servitude and arrogance go hand in hand; military display, social exclusiveness, and exclusion of plain people are used to impress the imagination of the unthinking as it in the courts of Europe.

Gas by the Can

By WILLIAM HALLOCK, PH.D.

It is exceedingly likely that within the next twelve months dwellers in isolated country homes will buy from the grocer gas to light their households as readily as they now buy kerosene. A new illuminant, called blaugas, after its inventor, Hermann Blau, has made this possible. It is delivered in handy little cylinders as easily and safely as so much bottled cream. We need not do violence to the imagination to picture the suburban housewife in the near future telephoning her order to the grocer for so many dozens of eggs, pounds of starch, cans of tomatoes—"and a five-pound cylinder of blaugas." The gas has been successfully and cheaply made and handled; it can be managed by any one of ordinary mind, and it furnishes a light of remarkable brilliancy. The use of it has been put upon a sound commercial basis in Germany and probably will soon be established in the United States.

When the country house has been completed the lighting problem arises to trouble the owner. Too distant from town to have the ordinary gas-pipes laid in, unwilling to run the risk that often accompanies the complicated process of making gas on the premises, or the high cost of electric installation and supply, the householder to-day is in a parlous situation. It was with this condition in mind that Herr Blau worked and experimented for years in his laboratory at Augsburg, Germany, until he produced the novel and quite remarkable illuminant which will add a new pleasure to country life, or serve for lighting city houses or streets. The gas is made from coal, crude petroleum, or any of the other materials used in ordinary gas manufacture, and is carried about in cylinders, which, although charged at heavy pressure, cannot explode, need no protection from heat or cold, and are available at all seasons. Each householder can obtain a simple outfit which may be placed in the cellar or back yard, and which requires only the slightest attention. By opening a stop-cock the day's charge is drawn from the storage cylinder into an intermediate tank, from which it passes through an automatic regulating valve into the pipes of the house.

The cylinders in which the new bottled sunshine is supplied range in size from one pound to fifty. A cylinder containing ten kilos, or twenty-two pounds, of blaugas is about six inches in diameter and three feet high. The gas is in such concentrated form that this ten-kilo cylinder will furnish a fifty-candle-power incandescent burner during four hours a day for a period of four months. Even they who hearken to the call of the wild can use the new illuminant, for a small portable outfit weighing

but a few pounds and taking up very little space will afford ample light and heat for the camper. The country lecturer is freed from the necessity of sending around large cylinders of oxygen and hydrogen. He who wishes to build upon some remote and delightful spot need no longer carry over the problem of illumination. Meanwhile the town-dweller suburbanite in the newest of suburbs can readily combine with his near neighbors and enjoy all the comforts of city gas at a price which is imperceptibly higher. It will be quite possible for a company so to arrange its plant that during the busy hours of the evening it can be run exclusively for the local customers who take the supply by direct pipes into their houses, while during the rest of the day it can produce blaugas for shipment in cylinders to distant customers. Gas companies of to-day must provide enormous storage capacity so that the generator may run all day and prepare for the heavy draught at night. Blaugas, on the other hand, is so condensed that it requires comparatively little storage room. The high pressure under which it is delivered, together with its great caloric value, makes possible the use of very small pipes. This, of course, reduces the cost of installation and maintenance and makes the blaugas available in ways beyond the possibilities of common gas.

The manner of joining the supply suggests many new ways of usefulness. The burner is of the mantle type, giving a brilliant white incandescent glow from a lily stream of gas. This stream is so thin and threadlike that it can be driven readily through flexible copper tubing no thicker than ordinary telephone wire. Thanks to this quality the new gas can be used for swinging lamps. Moreover, as there is no water in it, blaugas does not corrode the fixtures or the piping. As the combustion is perfect there is no by-product or waste to be removed. If one were asked to name the advantages of blaugas over all other forms of illuminant the answer would be: simplicity, safety, brilliancy, reliability.

This, of course, applies chiefly to the city dweller. It is interesting to consider the case of Hermann Blau, able chemist, working patiently for years in obscurity, searching for a solution of the problem which reached its climax when mankind remote from large towns had eroded from the use of the crude yellow dip to illumination by electricity, kerosene, or acetylene with their attendant large cost or high risk. The successful inventor is rarely the one who contents himself with the discovery merely of the odd of the ingenious without reference to its possible application in the arts. We often say that it is better to invent a new ascender buckle than a new harmonic analyzer. That is, it is most advantageous to study very carefully the actual daily needs of humanity, find some process or product in which improvement would be of the highest value; then assume that the problem has a solution and proceed to find that solution. Herr Blau discovered the faults of ordinary illuminants, satisfied himself that great betterment was possible, and labored diligently to find the means of betterment.

What was the problem to which Blau addressed himself so successfully? In the manufacture of all the ordinary forms of coal gas or oil gas the raw material is subjected to destructive distillation in large retorts, and the resulting mixture of products is subjected to various separation and purifying processes. In this output there are all sorts of compounds, ranging from such gases as hydrogen, methane, and the rest, through liquids of all degrees of volatility, and ending with tar at the other end of the line. The relative amounts of these various constituents, and to some extent their nature, depend upon the temperature at which the distillation takes place. The lighter gases, hydrogen, marsh gas, carbon monoxide, etc., are not so general as desirable for heating and lighting purposes as the heavier gases and vapors, for the simple reason that per cubic foot there is much less material there to burn. For general distribution or for ordinary compression it is necessary to use only such gases or gas mixtures as remain gaseous even under the high pressure to which they are subjected. This condition necessarily limits the possibilities very greatly. The tendency always being to ward the elimination of just those high carbon gases which are most valuable for heating and lighting.

Blau overcame the opposite course—to produce a liquid which should furnish the desired gas when it was relieved from pressure. Of course, we are aware of such liquids as gasoline, ether, etc., but none of these is conveniently available. Blau set himself the

If the full Size of a Page of "Harper's Weekly" be taken to represent One Candle-power in ordinary City Gas, then the corresponding Power in Liquid Blaugas would be represented by this little Square

ability, and cheapness.

of it in isolated houses or groups of detached houses distant from a large gas-plant. Nevertheless it would be quite possible for a city dweller to supply his house with the blaugas and improve his lighting at very little added cost. The stuff is not poisonous, and there is no more danger of leakage than in the case of common gas. Blaugas seems to have arrived just at the time when the various defects of other lighting equipments have made the need of some new system imperative.

This small portable Blaugas Outfit supplies 50 Candle-power for 3 1/2 Hours per Day for Two Weeks. The Photograph was taken by the Light itself

A small local Plant in Reichenhalla, in Bavaria, now supplying Twenty-five neighboring Villages

problem of producing a liquid which should be a mixture of several easily volatile compounds, or of such as are vapors at ordinary temperatures, and then compressing into this large quantities of the permanent gases—hydrogen, methane, etc.

This sounds simple, but it must be borne in mind that two very important characteristics of such a solution under pressure must be reckoned with. First, the manner of its evaporation on relief of pressure, and secondly, how to produce it commercially. Conditions must be so arranged that the permanent gases will not all go off first, and then the vapors, thus changing the composition of the gas. This would be fatal. A pressure solution must be provided, so that when the permanent gases go off the vapors only under these conditions will the constitution of the gas remain constant and the liquid be available. Thus by the happy combination of the ideas of reversing the proposition and using the terrible gases and of the careful research for the right conditions did Illian make the first great stride toward his goal and satisfy the second requirement.

Although Illian in his researches took up a rather bold line of attacking the problem, it must not be thought that his process is in any sense revolutionary. He has simply made one of those lucky applications of theoretical principles to a practical solution of his undertaking.

In the usual methods for the production of illuminating gas it is necessary to carry on the distillation at comparatively high temperatures, in order to break up the high molecular hydrocarbons, thus furnishing a larger percentage of the permanent gases. On the other hand, Illian carries on his distillation at lower temperatures, 600° to 700° C., at which a large percentage of the easily liquefiable gases is produced, together with a smaller percentage of the permanent gases.

An Isolated House Plant arranged to be set up in the Open Air

In the process of manufacture the oil is fed at a uniform rate into a retort which is maintained at a fairly uniform temperature of about 1200° F. Under these conditions the oil is broken up into various compounds, which pass over into a cylinder, where the liquids are chilled out, and the tar and other similar residues collect and are removed. From here the gases pass on, and are purified by passing over time and other substances which remove the noxious gases, carbonic acid gas, sulphurated hydrogen and the like. In this operation the blaugas is entirely freed from all poisonous constituents and made pure and harmless. The mixture of gases and vapors now goes through a small gasometer to equalize the running of the compressor with the output of the stills. In the compressor the mixture is subjected to a pressure of about 100 atmospheres, or 1500 pounds per square inch. Under this pressure a large percentage of the vapors is condensed to liquids, and proceeds to dissolve a very large amount of such gases as hydrogen, marsh gas, etc., which are not injured by pressure. There is, however, more of the permanent gas in the mixture than the still than will thus dissolve in the pressure solution. This excess passes out of the compressor and may be used for any of the ordinary uses of gas; for example, it may be used to run the gas engines which operate the compressing plant. The pressure solution is then drawn off into the shipping cylinders.

As to cost, it may be said that it is only a little more expensive at present than gas supplied from large metropolitan plants in pipes direct. It is cheaper than electric incandescent lighting, even from large plants. The house outfit is very simple and cheap, and under these conditions one can easily imagine the long list of applications for which it is eminently adapted. In this connection it should be borne in mind that inasmuch as it uses the small incandescent mantle, the burner can be placed in any position, and they lend themselves to decorative illumination even better than the electric lights with their ugly flames. In fact, all these things have already been done, and the country of Illian is already enjoying the results of his endeavors to supply an illuminant which seems almost ideal.

Of course there are at present means for lighting the suburban villa and the country mansion, but they are either inconvenient, inefficient, or unsafe, or all at once. In succession the whale-oil lamp of a century ago gave way to that which burned kerosene, and which was in its day a great wonder. Its glory was short-lived, and it yielded its place to petroleum or kerosene, which in to-day the lamp of the humble home, and will doubtless so remain for some time. The advent of kerosene has infused a little new life into the proposal to use the vapor lamp with incandescent mantles, but not much can be expected from this source. Although the kerosene lamp will hold its own, we are nevertheless, conscious of the continual nuisance of keeping the lamps clean and filled, as well as of the frequency with which accidents result in the loss of property and life. The various forms of gasoline gas machines for individual home plants are only a limited success, and involve constant trouble and attention, and are not without elements of danger.

When Edison invented the incandescent electric light, he was quoted as saying that "he had made the lamp long before he could simplify it so that 'any fool or male could use it.' Not the least attractive feature of blaugas is that no intricate technical knowledge need be acquired before installing and using it. It is available for all sorts of towns or less isolated plants; country houses, whether they were originally papered for gas or not, club-houses in the country, casinos, school-houses, factories, public buildings of all sorts, plants for small towns not large enough to support a generating plant, for railway trains, vessels, and yachts, and so ad infinitum.

Since the day when Charles Lamb invoked the divine benediction upon the man who invented candles, civilized man has been directly and keenly interested in the question of efficient means of supplying illumination in acceptable form.

If light is the antibiotic for vice and deception then surely he who makes two candle-power to glow where only one glowed before has certainly made his real contribution to the advancement of human civilization and human comfort.

A small portable Outfit which will supply 50 Candle-power for 3-4 Hours a Day during a period of Two Weeks

"THE WATCHWORD OF THE HOUR—HONEST BUSINESS AND FAIR PLAY"

HON. ELBERT H. GARY'S IMPRESSIVE DECLARATION AS SPOKESMAN OF THE UNITED STATES STEEL CORPORATION

The Greatest Industrial Enterprise in the World. Owning and operating Mines, Mills, Railroad and Steamship Lines, employing 210,000 Men, paying \$160,000,000 annually in Wages

By JOHN KIMBERLY MUMFORD

"THERE is a great awakening in this country with relation to better conduct, more decency, more honesty, more responsibility—by everybody, to everybody. It doesn't make an atom of difference who brought it about. It's here. Mark my words, that is the keynote of the American business situation to-day.

"There has been deceit, there has been over-reaching, there have been errors of kinds innumerable, but from this time forward there is going to be more fairness and a lot more candor and rectitude in the transaction of business.

"Any man who says he is not influenced by selfish motives in his dealings is, of course, a hypocrite. We all know better; but there is a host of men who can appreciate a policy of honesty, and every sane man sees that such a policy must be scrupulously followed. And this idea should extend until it prevails in all dealings and in the management of all corporations. It is in the air! The tendency of business heretofore will be to report the public, and the man who antagonizes that policy will be ground out sooner or later."

This declaration was made to me the other day by Judge Elbert H. Gary, chairman of the Finance Committee of the United States Steel Corporation.

If what the Senator of the Senate, Mr. La Follette, says is true—that one trust is a consolidator and co-ordinate part of every trust and all trusts—then this declaration by Judge Gary is the most important statement that has been made in this country for, in, these many years; for in such event it must be accepted as the voice of the entire financial and industrial power of the United States.

But even if it be only the expression of the Steel Corporation's attitude, it is scarcely less significant.

When the Steel Trust talks out from the diaphragm there is no man in America, whether he is his own boss or whether he works on a salary, but can afford to sit up and pay attention, because it means something to every individual.

Steel with its billions of money; Steel with its myriad glowing furnaces, its thundering mills, and its smokestacks that stalk in a crowd; Steel, with its thousands upon thousands of miles of ore land and coal land and gas land; Steel, with its endless railways and its fleets of vessels; Steel, with its swarming populations of workmen and its trade lines penetrating every business and every corner of the world, has become the touchstone of our fortunes and the barometer of our condition.

They used to say "As New York goes so goes the Union." Now they say that as Steel goes so goes the whole mighty current of American business. We live and work in steel buildings, we ride in steel cars and steel ships, our intermediate in our steel wires—we are surrounded and entrained and converted, transported, and finally entertained by steel. We are Steel and Steel is us.

The very form and embodiment of the trust idea—the Simon purveyor of corporation in its highest potency—is the Steel Trust. Hailed at its birth by the conservative as a monstrosity, and derided as an impudence greater than Lucifer's, the Steel Trust has been

a huge disappointment to many. It was a machine too cumbersome to work, they said; a ship too heavy to float, an annihilator of personal rights and a foe to honest labor. But it is still here and growing. It has raised wages and reined prices. It has averted one panic and straddled the country through another, and it possesses a long arm and a sturdy voice.

It stands to reason, therefore, that what the Steel Corporation, through its authorized spokesman, has to say in this most important stage of business recovery is to be taken, in a way, as the watchword of the time.

In its application this utterance seems to mean, moreover, that it is apt to go hard with the business gentleman, or set of gentlemen, or even the corporation, that is caught out after dark without the commission.

"This," Judge Gary went on to say, "is bound to be the attitude of every corporation and of every man in business—honesty and fair play. The corporation has got to play fair with its competitors and its workmen, the workmen and the competitors have got to turn around and do the same thing. The corporation official, too, has got to play fair with its stockholders instead of taking advantage of his information in order to skim off the cream for himself. Business must be done honestly, and the honesty must come from the inside out, instead of from the outside in.

"I say must, because it is essential to stability and to the success of American business, and as soon as this is understood and there is a thorough housecleaning on everybody's part, the result will be apparent quickly. There will be a restoration of confidence in us by foreign nations, who have been led to believe that our entire business system is rotten. That view is going to undergo a very speedy change, because it will soon be plainly seen that things are right. We are going to have higher values, because the stockholder is going to feel that the man on the inside is conducting the company's business for the stockholder's benefit instead of for his own."

That, Judge, will not the perpetually critic say that this new declaration of principle is due, in one way or another, to competition?

"I should very much dislike, as I think any man would, to admit that I would be devout only because I had to be. And in fact I do not believe any such admission is necessary, nor any such criticism warranted. The majority of people, I am optimistic enough to believe, are at heart honest. The moral ground is sufficient to dictate the policy I have outlined; but if, to grant the worst, it were not, then ordinary good business sense and judgment would demand it, anyway."

"In saying this I speak candidly and with a pretty thorough knowledge of conditions. The Steel Corporation is in a large way a business, and its interests are carefully diversified and safeguarded enough, lines of trade to give us a very clear idea of which way the wind blows. We are in touch with pretty nearly all sorts of commerce and all phases of labor. We have facilities for competition which would enable us, if business were to be conducted heretofore on the old-time basis of 'dog eat dog,' to give a very good

Hon. Elbert H. Gary

Iron Ore from Duluth being unloaded at Connaught Docks

account of ourselves and make a very considerable amount of trouble for our competitors.

"We own, for example, a practically unlimited and a satisfactorily diversified supply of ore on which to draw, and that is, of course, the basis of the business. We have railroads and ships, which facilitate the carriage of materials and products with the minimum of cost and the maximum of ease and quickness. We have unbounded supply of fuel; we have a great number of plants turning out steel products of almost every nature from great girders and plates for battleships down to piano wires and stock springs, which we produce by the railroad. All these plants are equipped with the most advanced appliances, and we put in any machine that will increase efficiency as soon as we have fully demonstrated its value. We control the production of our own supply. We are in possession of the best talent that can be found to operate all this immense mechanism, and we are always on the lookout for such talent. This is the equipment which very large capital provides, and it enables us to extend our expert business, which is even now amounting to about 100,000 tons a month.

"We can readily see the power that such an equipment gives. Where there is competition in a diversity of products we are in a position to keep going in the hardest times, since our average of profits can be easily maintained by control of commodities not seriously affected by market conditions. For instance, the demand for several products has been very tight the past few months. Yet for other products, such as wire for fences, etc., needed by farmers the demand has been and is very great indeed, and the farmers through the recent trouble have been in better shape than anybody else.

"But as a matter of fact we do not take advantage of our strength in this direction and we have not. We don't want to drive our competitors out of business. I admit that there are many minds regarding the wisdom of this policy. There are men who persist in not seeing it, and who have to have a lot of convincing. There are a hundred thousand stockholders, who all have their opinions. We persist about sixty per cent. of the steel, and we do not wish to increase the percentage. We do not want a monopoly of the business, and we are not trying to get it.

"If it is good for us to be prosperous in trade it is good for our competitors also. When the panic came we met about fifty men who are leaders in the steel industry, and frankly said to them:

'There is danger of a general scramble and a smash which will lengthen the panic and extend it in every other line of business; perhaps we can be of some service both to ourselves and the country generally.'

"We were confronted by the legal phase of it. We could not enter into a combination or do anything that could be possibly construed as opposed to the public interest or the laws as they read. It was plain enough, however, in the emergency that the public itself would be just as clearly opposed to the other thing, namely, a resort to the survival-of-the-fittest doctrine, which is the real world mean putting a lot of people out of business, and an army of men permanently out of work. We were convinced that what the public wanted was stability of prices, an avoidance of any abrupt change or of violent fluctuations.

"We made no combination or agreement. What we did do was to hold regular conferences of all concerned, competing interests as well as our own, and we let one another know just what we were doing or about to do.

"We appointed for this purpose a committee of seven, without power, but solely for information and advice. We kept the public posted and we kept the government posted on what was being done. The result was a substantial maintenance of prices by most of the producers, which proved a very solid factor all through the difficulty. Certain of our competitors in past years of high prosperity have asked us to put prices up in order that they might squeeze somebody who had to have particular products. We refused. And others have asked us to reduce prices for corresponding reasons, and we refused them. The result is just what I expected it would be. Because we have been doing business in this way we have received letters from business interests all over the country approving our stand. The trade associations, hardware organizations, and the like, have passed resolutions to that import.

"When the Steel Corporation was formed we proposed to give frank statements to the public regarding our affairs, and we have been doing so ever since in being blind to the signs of the times. Everybody has got to go to work and get straight and stay straight, and the thing most essential to that is publicity. I believe in it, first, last, and all the time. By publicity I don't mean advertising. We don't need that. I mean letting the public know what you are doing and how you are doing it, so long as the management of your

telling what we were doing and what we purposed doing. There's no sense in being blind to the signs of the times. Everybody has got to go to work and get straight and stay straight, and the thing most essential to that is publicity. I believe in it, first, last, and all the time. By publicity I don't mean advertising. We don't need that. I mean letting the public know what you are doing and how you are doing it, so long as the management of your

Shenango Works, at New Castle, Pennsylvania

business is legitimately a matter of public interest, in order that reassurance may grow and confidence may be maintained."

"And where does the workman come in under this new dispensation? What has he got to do with it?"

"Everything," replied the judge. "It concerns him just as deeply as it does the rest of us. Whatever contributes to the improvement of business conditions helps the working-man, and he knows it. Good times, good conditions, mean big demand, big output, plenty of work and more pay. That's clear enough. We want nothing better than a state of things that will keep every workman busy and prosperous. And to bring about the conditions that I am talking about—the conditions that are going to prevail—labor as well as capital has its duty to perform. Capitalists must work among themselves to improve the state of things on their side, but it is up to labor also to clean house and better its own methods."

"You think, then, that the workman has a chance to progress? That a fair field is given him?"

"Absolutely! And he is progressing. He is better off under the modern industrial system, the corporate system, if you please, than he ever was. When the Steel Corporation was formed there were great anxiety and dire prophecy about what it was going to do to the working-man. And what has it done? The pay rolls show plainly enough. We employ 210,000 men, and they are getting more money than they ever did, and are more contented than they ever

were. Inquiry and investigation, I think, will prove this. In every one of our plants earnings have gone up. We have tried to equalize wages as much as could be done justly. The day-laborer has

got more than he used to get, and the disparity between his wages and those of men paid higher rates has been reduced. We have mines where a great number of Finnish and Slav miners own their own homes. They couldn't have done that on starvation wages."

"The bonus system of extra pay for better work has put money into the pocket of every man that had the energy or the skill to profit by it, and the profit-sharing plan, which enables any employee to own stock in the company, is proving a greater success every year. Don't make any mistake about it; the man who owns stock is working for himself, and he feels it. Here is a letter that tells the whole story:

James Glavin,

DEAR SIR:—As a stockholder of the U. S. Steel Corporation I feel it my duty to inform you that I have just sold your No. — in being removed, and I have reason to believe it is being taken to the house of the superintendant. I think you had better have this looked into.

Yours truly,

Deep in a Lake Superior Iron Mine

"I did have it looked into, and I found he was right. Now the man who wrote that letter was a laborer who, under the profit-sharing plan, had become the owner of a single share of stock. He was interested, when he saw anything going on of detriment to the company, not, perhaps, to the same extent that I would have been, but for precisely the same reason."

Train loaded with Ore leaving Conneaut Docks for Pittsburg

Interior of Tube Mill at McKeesport

"I tell you that man is no anarchist! He is a capitalist—a partner in the Steel Corporation—one of the owners of the whole business. And to show you just how thoroughly workmen of that grade are realizing what the system means to them, let me go into details a little. The stock is offered to the men at less than the market price. If they remain in the company's employ it means a rebate of \$5 a share for each year, or in the sixth year \$30 less than par. We are in the habit of offering each year 25,000 shares, and last year that amount was oversubscribed up to 50,000. We allow one share to the man who earns \$600 a year; two shares each to men who get from \$600 to \$1,000, and so on. The question was what to do about the oversubscription. Seven thousand of the first class subscribed for their one share per man, and 14,000 of the second class for their 28,000 shares. That left us in a predicament. We could neither afford to leave out the men above who are in reality most responsible for success, nor could we leave out the lower grade, for they are the ones who most need the benefit. We settled it by giving the 36,000 men their 70,000 shares, and cutting the allotment of the higher grade in half.

There isn't a man in the company's employ who hasn't every opportunity in the world to advance himself if he has energy and brains. Ability is at the highest kind of a premium. We want men to think and experiment. If any man, no matter what his rank, can devise any improvement in the method of doing anything, we want him to do it, and we will see and do so that he gets his full share of benefit of it. This organization is not merely for to-day or to-morrow, and it must keep not only abreast of competition, ahead of the times, but distinctly ahead of them, and no amount of money per se can accomplish this. We must encourage and develop ability in every grade. I say every grade, because in the first place we want no dead wood and in the second place nobody knows but to-morrow some day laborer on \$600 a year will devise an improvement in steel processes that will revolutionize the industry. Stranger things than this have happened.

There's no such condition as there was in old times, when

manufacturing concerns were family affairs, passing from father to son by hereditary right; when the son of the house took up the mantle of management no matter whether he was qualified to wear it or not. In those days, no matter how bright a man was, he had no opportunity given him to rise. He simply had to hammer it out for himself. In the United States Steel Corporation I believe ninety per cent. of the men in high positions are self-made, and I think it safe to say that without exception the head of every one of our subsidiary plants came up from the ranks.

No, the old cry that the Trusts restrict opportunity is the most absurd of all things. It is positively the other way about. They create opportunity, and their unceasing effort is to get men to rise to it. Good pay for good work, and a chance to come up, are the foundations on which a corporation is bound to build its whole hope for the future.

As for the unions, we have no objection to them *per se*. Working men have a perfect right to combine to get all the wages they can. When the corporation was organized we had many mills run by union labor and many that were not. Our policy has been to make no changes. The trouble is that a large majority of men don't go into the unions unless they are forced in, and I really believe that, because of reckless management on the part of leaders, some of these organizations injure the members rather than benefit them. What we regret in regard to such ill-advised unions is their method of operation, particularly their suttlering and the resort to violence.

But I will not go back on my original position at all, and I admit right now that this is not a one-sided affair. We condemn certain union methods, but some of those who represent capital are just as much to blame. Capital has done the same thing, only in a somewhat different way. The thing to do now, as I said in the beginning, is for both sides to quit trying to take advantage of each other and of the public; to get down to business—straightaway honest business and fair play—and we'll see things move in a manner that will be good for everybody."

Works at Yongetown, Ohio, one of the largest Rail Mills

Hermione cleared her throat. She felt the need of doing something physical. Then she pulled up her blinds and let the hot sun stream in upon her.

She felt dark just then—black.

In a moment she found that she was perspiring. The sun was fierce—that, at least, must be the reason. But she would not shut the sun out. She must have light around her, although there was none within her.

She was thankful she had escaped in time. If she had not, if Vere had run into the room and found her there, she was sure she would have frightened her child by some strange outburst. She would have said or done something—she did not at all know what—that would perhaps have altered their relations irrevocably. For, in that moment, the sense of self-control, of being herself—she put it—had been withdrawn from her.

She would regret it, no doubt. She was even now regretting it. Already she was able to say to herself that she was not seeing things in their true proportions, that some sudden crisis of the nerves, due perhaps to some purely physical cause, had plunged her into a jolly of feeling from which she would soon escape entirely. She was by nature emotional and unguarded; therefore especially likely to be the victim in some of any bodily ill.

And then she was not accustomed to be unwell. Her strength of body was remarkable. Very seldom had she felt weak.

She remembered one night, long ago in Sicily, when an awful bodily weakness overtook her. But that had been caused by dread. The mind had reacted upon the body. Now, she was sure of it, body had reacted on mind.

She felt unequal to the battle of prose and verse that was raging within her.

"I'll be quiet," she thought. "I'll read."

And she took up a book.

She read steadily for an hour, understanding thoroughly all she read, and wondering how she had ever hitherto she cared about reading. Then she laid the book down and looked at the clock. It was nearly noon. Ten would perhaps refresh her. And after tea? She had loved the island, but to-day she felt almost as if it were a prison. What was there to be done? She found herself wondering for the first time how she had managed to "get through" week after week there. And in a moment her wonder made her realize the inward change in her, the distance that now divided her from Vere, the gulf that lay between them.

A day with a stranger may seem long, but a month with a friend how short! To live with Vere had been like living with a part of herself. But now what would it be like? and when Emile came, and they three were together?

When Hermione contemplated that reunion, she felt that it would be to her intolerable. And yet she desired it. For she wanted to know something, and she was certain that if she, Vere, and Emile could be together, without any fourth person, she would know it.

A little while ago, when she had longed for bracing action, she had resolved to ask Kismet to meet the Marchmonts. She had felt as if that meeting would clear the air, would drive out the faint mystery which seemed to be encompassing them about. The two men, formerly friends, were suddenly in antagonism now. She wanted to restore things to their former footing, or to make the enemy come out into the open, to understand it thoroughly, and to know if she and Vere had any part in it. Her desire had been to throw open windows and let in light.

But now things were changed. She understood, she knew more, and she wanted to be alone with Emile and with Vere. Then, perhaps, she would understand everything. She said this to herself quite calmly. Her mood was changed. The fire had died down in her, and she felt almost sluggish, although still restless. The mysterious idea had come to her again. She did not violently reject it. By nature she was no doubt an impulse. But now she was slow to let a whisper. Before she took up her book and began to read she had been, perhaps, almost hysterical, had been plunged in a writer of emotion in which reason was drowned, had not been herself.

"Gaspard," he said, "I think you know that I have a great regard for your padrona."

But now she felt that she was herself.

There was something that she wished to know, something that the knowledge she had gained in her child's room that day suggested as a possibility. She regretted her note to Emile. Why had not she asked him to come alone, to-morrow, or even to-night—yes, to-night?

If she could only be with him and Vere for a few minutes to-night!

CHAPTER XXIII

WHEN Artois received Hermione's letter he asked who had brought it, and obtained from the waiter a fairly accurate description of Gaspard.

"Please ask him to come up," he said. "I want to speak to him."

Ten or three minutes later there was a knock at the door, and Gaspard walked in, with a fingered inquiring look.

"Good day, Gaspard. You're never seen my quarters before, I think," said Artois, cordially.

"No, signore. What a beautiful room!"

"You're not in a great hurry, are you?"

"No, signore."

"Then smoke a cigar, and I'll write an answer to this letter."

"Thank you, signore."

Artois gave him a cigar, and sat down to answer the letter, while Gaspard went out on to the balcony and stood looking at the bathers who were diving from the high wooden platform of the bath establishment over the way. When Artois had finished writing he joined Gaspard. He had a great wish that day to break down a reserve which he had respected for many years, but he knew Gaspard's determined character, his power of obstinate, of dogged silence. Gaspard's will had been strong as a boy. The passing of the years had not certainly not weakened it. Nevertheless, Artois was moved to make the attempt which he forebore would probably end in failure.

He gave Gaspard the letter and said:

"Don't go for a moment. I want to have a little talk with you."

"No, signore."

Gaspard put the letter into the inner pocket of his jacket, and stood looking at Artois, holding the cigar in his left hand. In all these years Artois had never found out whether Gaspard liked him or not. He wished now that he knew.

"Gaspard," he said, "I think you know that I have a great regard for your padrona."

"No, signore. I know it."

Gaspard's eyes were always fixed steadily upon Artois, who, as he spoke the last words, fancied he saw come into them an expression that was almost severely trivial. It vanished at once as Gaspard said:

"The dose does not wish that she should be disturbed in any way—that any fresh trouble should come into her life."

Gaspard's eyes were always fixed steadily upon Artois, who, as he spoke the last words, fancied he saw come into them an expression that was almost severely trivial. It vanished at once as Gaspard said:

"No, signore."

Artois left the room in this last but not least servant's impenetrable reserve, but he continued very quietly and composedly:

"You have always stood between the padrona and trouble whenever you could. You always will—I am sure of that."

"No, signore."

"Do you think there is any danger to the signora's happiness here?"

"Here, signore?"

Gaspard's emphasis seemed to imply where they were just then standing. Artois was surprised, then for a moment almost relieved. Apparently Gaspard had no thought as common with the strange, the perhaps fantastic thought that had been in his own mind.

"Here—no!" he said, with a smile. "Only you and I are here, and we shall not make the signora unhappy."

"Chi lo sa?" returned Gaspard.

And again that ironical expression was in his eyes.

"By here I meant here in Naples, where we all are—or on the island, for instance."

Art Forgers of France

It is not only in New York that people are imposed upon with spurious works of art. Only recently criminal proceedings at Langones, in France, disclosed the fact that there is a fully developed, well-organized industry of forgery and falsification upon the Continent. It has as many domains as there are categories of collections, for the forgers and falsifiers long ago became specialists, and they can serve you with any class of art that you may need.

Many of their tricks are highly ingenious. They will make two semi-original, genuine works of art out of one, for example. A piece of carved wood is sawed through, making two pieces, and in each of these the missing half is replaced by a careful reproduction of the original. An authentic but only poorly painted *Nyctes* or *Messian* can be richly painted after the good pattern, exactly in the style required, and returned. A real but plain knight's armor is cladded with all the fineness of the craftsman, chased, gilded, and rendered "old." This restoration cost the artist a few dollars, a thing that genuine was worth 500 francs may, falsified, be disposed of at 2000. There are suits and sauces and jupes and varnishes that convert entirely new productions into art masterpieces of great value. Newly fabricated pieces are carried into "historical" country routes, whose owners find themselves to the game, and the purchaser learns—*for the profits are enormous*—that the restorer, who has been the property of an old noble family "for centuries."

The imitation of paintings by old masters was practiced as a trade at a very early date, to reproduce the golden tone of old paintings a common yellow Dutch varnish or a fine sepiolite varnish is employed; to imitate the dirt staining which forms in the course of centuries lacquer is used. By means of a few of these tricks are made, these famous "remplages," so important to the connoisseur; sometimes the imitator produces them by covering the painting with a metal plate and striking it with a hammer. The art of the forger's industry, that of exploiting the very great names, has been abandoned long ago; for the forgers are well enough aware that today a *Bernhardt*, a *Raphael*, a *Leonardo* da Vinci would meet with suspicion from the start. At present the French artists of the eighteenth century are mostly imitated. In false *Vergennes*, *Nattiers*, *Hemmes*, great things are accomplished, since the connoisseurs are misled to a large extent by the fact that these painters worked with replicas themselves. One forger sold a picture of a prince twelve times.

Producing the picture is, however, only the first part of the business. There is the product to be disposed of. Years ago there was a painter in Paris named *Abrher* who turned out six mythological scenes in his own name. In addition, it was rumored that he was the possessor of some old paintings. When a purchaser visited him in his studio there would be found among the mythological sketches, placed quite inconspicuously, a woman's portrait, "a little really, resembling a *Girze*." "Why, there you have a *Girze*," the customer says.

"Oh, I don't know," answers the artist, continuing at his painting.

"I admit that this is a *Girze*, won't you sell it to me?"

Abrher shrugs his shoulders and hails laughingly asks a high price.

"I knew I was right," the customer replies, apparently satisfied, pays what he had been asked, and carries his new art treasure home. And scarcely has he reached the street before *Abrher* hangs another "*Girze*," on the vacant place between his mythological sketches. Painting *Girzes* was his specialty, and he made much money by it, more than with Greek and Roman gods. At present, of course, such a thing could hardly be done. In our day the imitative painter, often not even admitting what he is doing, is willing to order for an art dealer. A trick just now very much in vogue with French art dealers of this category is, after having a "*Nattier*," a "*Vergennes*," a "*Remplage*," made to order, to arrange to let it into an auction sale at the Hotel Drouot. At the sale two confederates of the dealer force the price up

by outbidding each other. The picture is knocked down to one of them at a very large price. The statement on this sale is sufficient, a picture that commanded so much must be genuine, and it is resold at an increased amount.

Here is another ingenious trick. A dealer ordered a Dutch landscape. The picture was excellent, and the artist had painted the signature "*Jan Steen*, 1672," on it, as he had been instructed, after a fac-simile contained in a museum catalogue. But the dealer said: "The picture is so beautiful that you ought to put your own name to it." The signature "*Jan Steen*" was covered accordingly with the signature of the artist. As his work, the painting, was shipped to a well-known New York dealer. At the same time the New York customs officer received an anonymous letter conveying the information that upon a certain steamer a *Jan Steen* worth 200,000 francs, was to be expected, but that a false name had been painted over the signature in order to avoid the duty. The customs officers examined the painting, and detected the signature *Jan Steen* under the covering. The picture was therefore authentic, its authenticity being certified by the customs papers. The New York art dealer had to pay 20 per cent, duty and 50 per cent, fine, together 140,000 francs. And three days later he sold the *Jan Steen* for 250,000 francs.

The World's Output of Metal

The production of copper during the year 1907 shows a decrease for the first time in fifteen years. The total output amounted to 213,000 tons, the principal producers contributing as follows: United States, 421,400; England, 72,400; Central and South America, 55,000; Germany, 31,000; Japan, 15,000; Austria, 32,500; Russia, 15,000. The consumption is estimated as follows: United States, 232,000; Germany, 149,000; Great Britain, 108,200; France, 65,000; Russia, 18,000; and Asia, Africa, and Australia together, 32,000.

The world's production of lead in 1907 was about 992,400 tons, an increase of 2½ per cent, over that of the year 1906. The largest share in this increase was that of Mexico, whose output of the metal advanced from 24,000 tons in 1906 to 24,000 tons in 1907. The United States produced 340,700; Spain, 183,800; and Germany, 140,000 tons. The principal lead consumers in 1907 were: United States, 331,400; Great Britain, 188,000; Germany, 167,000; France, 81,000; and Belgium, 31,000 tons.

The tin production for 1907 was 38,700 tons, a large portion of which came from the Malay Peninsula. The consumption amounted to 100,100 tons. The United States consumed 30,700; Great Britain, 20,500; and Germany, 15,000 tons.

The world production of zinc in 1907 was 238,000 tons, an increase of 4 per cent, over the preceding year's. The United States with 256,838 and Germany with 204,700 tons were the chief producers of this metal. In the same year the principal zinc consumers were: United States, 265,000 tons; Germany, 174,000; United Britain, 148,300; and France, 69,000 tons.

The nickel production in 1907 was 14,100 tons, and of aluminum 19,000 tons. The year 1907 was the most extreme year in regard to price fluctuations and price discrepancies of the metals, and it is worthy of note that the production costs in the most important mining districts have considerably increased, owing to higher wage scales and higher prices of all materials used in mining, as also to the gradual exhaustion of the beds.

The London Taxicab

Taxicabs have become such popular street vehicles in London, that the demand for them is much greater than the supply. They are used by all classes of people, day and night, at the uniform rate of sixteen pence a mile, and present a most attractive appearance in electric, blue, yellow, red, and green hues, with chauffeurs in the lightest and smartest liveries.

Although scarcely a year has passed since

these swift-moving electric and petrol carriages appeared, the capital already invested in London taxicabs is \$10,000,000. There are 758 taxicabs on the streets, 2000 taxicabs on order, 1700 licensed drivers, and an average of 55 certificates is granted each week. There are eight London taxicab companies, and the average day's takings of a taxicab amount to \$11.20. The average cost of a London taxicab is \$1703.

Some chauffeurs are already buying their own taxicabs on the installment plan, and the picturesque hansom is disappearing gradually, like the old-fashioned horse bus, which has practically been crowded aside by the motor omnibus.

Not Much of an Eater

Mrs. DUFF (to her maid): "But, Mary, there are only two in the family. Mr. Duff and myself: why have you set places for three?"

THE NEW MAN: "Sure, ma'am, it was the cook that told me you had a planer player in the house."

Salaries of British Postal Employees

The average salaries paid to the employees of the British Post Office may be estimated on the basis of those shown in Nottingham, an ordinary midland town of about 250,000 inhabitants. The city postmaster receives \$3500; the assistant postmaster from \$1732 to \$2400; two superintendents from \$1411 to \$1930 each; six assistants from \$925 to \$1393 each; twenty overseers \$779 to \$878 each; the inspector in charge \$125 to \$1100; the inspector of mail carriers \$124 to \$900; and five assistants \$884 to \$730. These are annual salaries, weekly wages being as follows: 110 sorting clerks and telegraphists, from \$7.50 to \$14 each; 290 mail carriers, not exceeding \$7.50 each; 20 rural carriers, not exceeding \$5.10 each. In the smaller cities of the Nottingham district postal employees of the same class receive slightly lower wages than in Nottingham.

THREE GENERATIONS OF HEALTHY BABIES have been successfully reared on BROWN'S EARLY BREAKFAST. It is a more than 100-year-old "old-fashioned" formula. The babies are healthy, strong, and moved quickly from placenta and prenatal pains to the merits of BROWN'S.

THE BEST ALL-ROUND FAMILY LINIMENT—BROWN'S KIDNEY PILLS. At once a tonic &c.

Use BROWN'S Camphorated, Scented, SPENTICE for the teeth. Delicious, 10 cents per Jar, etc.

ADVERTISEMENTS.

SPEAKS FOR ITSELF

Experience of a Southern Man.

"Please allow me to thank the originator of Postum, which in my case speaks for itself," writes a Fla. man.

"I formerly drank so much coffee during the day that my nervous system was almost a wreck. My physician told me to quit drinking it, but I had to have something to drink, so I tried Postum.

"To my great surprise I saw quite a change in my nerves in about 10 days. That was a year ago, and now my nerves are steady, and I don't have those dizzy headaches which I regularly had while drinking coffee.

"Postum seems to have body-building properties, and leaves the head clear. And I don't have the bad taste in my mouth when I get up mornings. When Postum is mixed good and strong, it is far better in taste than coffee. My advice to coffee drinkers is to try Postum and be convinced."—There's a Reason.

Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in page.

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

A SPIRIT IN PRISON

(Continued from page 25.)

"I did want to speak to him."
 "But he is not a boatman, signore. He does not go with the travellers. He is a policeman."
 "Yes. Do you know his mother?"
 "St. signore."
 "What is her name?"
 "Bernardi, signore. She is married to Antonio Bernardi, who is in prison."
 "In prison? What's he been doing?"
 "He is always after the girls, signore. And now he has put a knife into one."

The man shrugged his shoulders.
 "Diavolo! He is not one. He has not been tried yet; perhaps he never will be. His wife has gone into Naples to-day to see him."
 "Oh, she's away?"
 "St. signore."
 "And her name, her Christian name? It's Maria, isn't it?"
 "No, signore. Maddalena, Maddalena Bernardi."
 Artos said nothing for a minute. Then he added:
 "I suppose there are plenty of Maddalenas here in Mergellina?"
 The man laughed.

"St. signore. Maria and Maddalena—you find them everywhere. Why, my own mamma is Maddalena, and my wife is Maria, and so is my sister."

"Exactly. And your name? I want it, so that when next I take a boat here I can ask for yours."

"Fabiano, signore, Lari Fabiano, and my boat is the *Stella del Mare*."

"Thank you, Fabiano."

Artos put a lira into his hand.

"I shall take the *Stella del Mare* very soon."

"This evening, signore. It will be fine for sailing this evening."

"If not this evening, another day. A river, Fabiano."

"A river, signore. Buon pomeriggio."

The man went back to his companions, and as Artos walked on, began talking eagerly to them, and pointing after the stranger. Artos did not know what he would do later on in the evening, but he had decided on the immediate future. He would walk up the hill to the village of Posillipo, then turn down to the left, past the entrance to the Villa Iovis, and go to the Antico timepiece, where he would dine by the water-side. It was quiet there, he knew, and he could have a cigar and a nap, and a cup of coffee and a cigar, and sit and watch the night fall. And when it had fallen? Well, he would not be far from the island, nor very far from Naples, and he could decide then what to do.

He followed out this plan and arrived at the timepiece at evening. As he came down the road between the big buildings near the water-side he saw in the distance a small group of men and men leaning by the three or four boats that lie at the quay, and feared to find, perhaps, a hostile and noisy crowd of people round the corner at the ristorante. But when he turned the corner and came to the little tables that were set out in the open air, he was glad to see only one man, who was leaning over a plate of fish soup. He saw this man with out looking directly at him, and did not notice his appearance then; but when he had dined slowly his eyes were attracted by his lonely fellow guest once more, and he perceived that his companion was an Oriental.

The complexion of the stranger was not very dark, but the shape and pose of his hands, the shape also of his eyes, and their peculiar expression of brilliant resignation, convinced Artos at once of his Eastern origin. He was as trimly well dressed in clothes that had probably been cut in London, and looked not more than twenty-eight or thirty. As Artos considered him for a moment, not without interest, this man returned his glance with that strange and lawless impassivity which is the hallmark of the East.

Artos left immediately a strong desire to talk with this man.

Many such Egyptians make their way to Naples in the summer. Probably this was one of them.

The waiter brought Artos his coffee. The stranger, too, was

taking his. Over the sea the twilight was falling. Along the bay the lights came out. An almost complete silence reigned. Artos thought of the silence of the desert, the isolation of the desert, the loneliness that comes to a man there, with the enormous sense of resignation to a will immutable and profound, vast as the spaces that the sun has taken for his dominion.

From the stranger, surely, to Artos flowed the passive spirit of the East. It was as if they were in silent conversation.

This sensation of being in silent conversation with the stranger grew in Artos till he began to know whether he was giving as much as he believed himself to be receiving, or whether at least he was giving something in return for what he accepted.

Again he looked at the stranger and again he met his impassive steady gaze.

With an abrupt resolution Artos got up, went over to the other table, raised his hat, and made a remark about the beauty of the evening. The other replied courteously, in a low agreeable voice, Artos sat down, and they entered into conversation in French.

The man was an Egyptian from Cairo, cultivated, evidently cosmopolitan, apparently calmly content to talk.

Night fell, and they seemed as if they had known each other for a long time.

Artos felt more and more immersed in the spirit of the East. Never before, not even in Africa, had he been so conscious of it. The personality of his companion was a singularly powerful one.

At last the Egyptian moved and got up.

"Are you going back to Naples, monsieur?" he asked.

"I had thought of taking a boat and going a little way along the coast in that direction," said Artos, pointing towards the point.

"I have nothing to do. I have a boat here. Shall we go together?"

Artos hesitated. He had thought of going ashore at the island. He could not take the stranger there; nevertheless, he felt impelled to accept his invitation. And he did so. They went together to the boat and were soon out upon the sea.

The boatman was an old man. He rowed on quietly and steadily, with an even, regular stroke. They passed through the small harbor of the Villa Rosebery and saw the British consular piering up and down to the garden by the water's edge. He was alone.

"I should like to have a villa out here," said the Egyptian. Far away from Naples, yet opposite its harbor. They would emphasize the silence, the solitude, as the flame of a man's distinct fire emphasizes the solitude of the desert."

He leaned back, and was perfectly motionless, except now and then when he lifted his right to his lips.

His eyes were full of steady, liquid light. Artos could almost see him cross-legged on a carpet in the recess of some dim bazaar. He was a living enigma, capable, no doubt, of violent passion, yet serene as a dusty idol worshipped for centuries and making no return.

"You might find a villa, monsieur," Artos said.

"They tell me there is one on the island. Do you know it?"
 "Yes. It belongs to friends of mine."

The Egyptian said nothing, and the boat stole on, bearing their silence with it.

"We are not far from the island now," said Artos presently.

The Egyptian made an answer. He only looked at Artos steadily, and personality seemed to flow from him more strongly, more irresistibly, than before. Artos felt that here was a man who had no doubts or fears, who was armed by his questionings, beset by no anxieties; but a man who was resigned, who had passed into a region of manhood, serenity, and he was affected by this serenity. As the boat went on he thought of his recent arduous work, his recent irritabilities, even of the recent anxiety which had led his steps to Mergellina and which had compelled him when he came to the timepiece, and he marvelled at them. A calm that was like the great calm of the desert descended upon him. He felt the luminous touch of peace.

Low down, close to the sea, he saw a little light, and knew it for San Francesco's lamp. They were very near to the island.

(Continued on page 26.)

They came out upon the little terrace where Hermione was sitting alone

Railless Roadways for French Locomotors

The adoption of passenger and freight trains over railless roads in France has become not only a possibility but a fact. Already hundreds of inaccessible hamlets hitherto served by slow-going diligences are kept in constant contact with the auto-world by means of large auto-motobuses, moving at an average rate of fifteen miles an hour, transporting both passengers and express parcels; and now, following this development, comes the explosive engine motor, drawing full trains of cars, which, it is claimed, can be operated on level or mountainous roads at an exceedingly moderate expense. The first train of this type has just completed a successful trial journey between Paris and Marseilles.

The trains mentioned are composed of elements, each receiving the energy of a vehicle called the locomotor, which being placed at the head of the train, distributes the necessary power to the following elements by means of a transmission shaft extending from one end of the train to the other, thus enabling each car to utilize its own adhesion to the road surface as a means of advancement.

The locomotor is therefore lighter than any of the cars. Trains of this type completely loaded are able to maintain a speed of 21 kilometers (13.02 miles) per hour in case of passenger trains on levels, and of from 15 to 16 kilometers (9.32 to 9.94 miles) per hour in the case of freight trains. It is said that freight trains of this type are able to maintain an average of from 10 to 12 kilometers (6.21 to 7.45 miles), fully loaded.

If all that is claimed for these trains is realized, it will be possible to give 25,000 roubles in France approximately the same advantages with respect to transportation as the more populous and highly developed centres.

Warming Him Up

"My cousin's cold," sternly cautioned the frail old gentleman to his fair waitress.
"Put your hat on," she sweetly suggested.

To Improve the Port of London

The increasing encroachments made upon the supremacy of the Port of London by the rivalry of Antwerp, Hamburg, and other Continental ports, have led to the introduction of a bill into Parliament for the purpose of overhauling the congested docks that has grown up along the lower Thames, dredging and deepening the river, and consolidating the numerous companies under a single authority consisting of fourteen elected and ten appointed members.

No such money is required to bring the London dock facilities up to date that the three private companies controlling the existing dock system have agreed to turn over their interests to the Board of Trade, and to accept compensation in government stock when the dock bill becomes a law. Then a general and comprehensive plan of improvement costing about \$5,000,000 is to be inaugurated.

The proposed rates on goods will not be restricted to imports. As fixed by the Board of Trade, they will be payable, subject to any exemptions or rebates on "all goods imported from ports beyond the seas or coastwise into the port of London, or exported to ports beyond the seas or coastwise." The dock dues of thirty-seven cents per ton now levied by the London and India Company are to apply to all the docks vested in the port authority, but not to vessels merely passing along the Surrey coast. Existing city officers of the dock companies, the Thames Conservancy, and the Waterman's Company are to be transferred to the port authority, and to hold office on previous terms, including conditions of pension. Where the office or situation is abolished there is provision for compensation, and any officer or servant dismissed within five years, except for misconduct, is to be deemed to have suffered loss.

COMFORT FOR CROWDS.

Have a corner in the nifty satchel for the needful when needed; for the butter at the bat, the sprinter at the scratch, the carman on the stroke, and the thousands of excursionists who will weary under jostle and heat.

HUNTER BALTIMORE RYE

IS THE PUREST AND MOST PERFECT
STIMULANT FOR THOSE WHO NEED
CHEER, COMFORT OR STRENGTH

How to Serve Grape Fruit

IMPORTANT TO BECAUSE IT IS ABOUT 100 YEARS OLD

A new and better way. Prepare early. Served fresh from the vine, and a wonderful of a delicious fruit. It is best to serve grape fruit and sugar to eat alone. Given excellent food and adds greatly to the enjoyment and better effect of the fruit. Every layer of good things will enjoy grape fruit served in this manner.

(Continued from page 28.)

He thought of Hermione, her vibrant nature, the passion that was in her, her instinctive rebellion against the sorrow that companioned her, her instinctive struggle after happiness. And there entered into him a strange desire to introduce to her this unknown Egyptian, who was become to him already an emblem of resignation.

The shadow of the isle appeared above the shadow of the water. He saw the long eyes of the Egyptian fixed steadily upon it. The boat drew in towards the Sultan's Pool and passed beneath the benediction of the saint. And the old boatman bent to the water and made the sign of the cross. As he did so the Egyptian watched him, not with wonder, not with astir, but as the Sphinx might watch a pathfinder of Salsimone, if it could avert the gaze that is directed to some eternal vision. And religions seemed to shrink and shiver, to become as the grains of sand that drift beneath the Sphinx.

The boat stole into the Pool. Artos stretched out his hand and touched the boatman, and indicated that he wished to land. The old man turned the prow to the island. When it grated against the cliff Artos got up. He looked towards the Egyptian, who silently followed his example. They landed and walked slowly up the steps towards the house. Artos did not feel that what he was about to do was strange, but only that he must do it, that it was inevitable. The house door was open. He passed in, followed by his companion. They came out upon the little terrace, where Hermione was sitting alone without a lamp—meditating, perhaps, beneath the stars.

When she saw Artos she got up. She looked at him, then beyond him to the Egyptian.

"I was in a boat with a friend, Hermione," said Artos. "I thought I might bring him in for a moment to salute you. Let me introduce him to you."

He did not mention any name, for he did not know who the Egyptian was.

Hermione and the Egyptian bowed to each other.

"Will you have some coffee, nonne?," Hermione asked.

"Thank you, madame, we have had it."

"Then a cigarette?"

She handed the box, which was on the little table by her side.

He took a cigarette and lit it.

"Madame," said the Egyptian, in his soft and steady voice, "allow me to give you a hint. If you should ever wish to give up your island you might think of me."

He laid a card upon the table.

That night, as she sat upon the terrace, Hermione had been thinking again and almost with terror, of the island, which was beginning to seem as a prison to her now, and her horrible unrest. Had this man read her thoughts? She looked at him in wonder. And now for the first time she saw that he was Eastern.

"We are very fond of our island, nonne," she said.

"Madame?"

"My daughter and I. My daughter is out on the cliff, I think. She may come in presently."

"She loves it even more than you, perhaps?"

He was reading her thoughts. She had known strange instances of the Arab's power to do that, and was already losing her surprise. Now did she mind?

"Perhaps so. She is like a sea creature."

"The sea tricks her, but the desert tames her."

"What does it teach?"

"Madame must know if madame has ever been to the desert."

"I have been."

"Yes."

He had known that, too! She looked at Artos. He sat quite still. No doubt he was listening.

"I don't think I should ever learn the lesson of the desert," said Hermione. "Perhaps only those who belong to it can learn from it."

"If it is so, it is sad—for others," said the Egyptian.

His voice was perfectly indifferent, without sympathy as without contempt.

And his absolute indifference fell upon Hermione, as already it had fallen upon Artos, with an effect that was something, almost with a magical effect. The painful excitement that had rent her that day faded out like a flame that nothing feeds. Instinctively she folded her hands. Her body, too, was aware of the spell.

"They seek, I suppose," continued the Egyptian. "They rebel, they fight, they try to avoid things, they try to bring things about. They lift up their hands to disperse the grains of the sand storm. They lift up their hands to be heard by the wind from the south. They stretch forth their hands to gather the mirage into their bosom. They follow the drum that is beaten among the dunes. They are afraid of life because they know it has two kinds of gifts; and one they snatch at, and now they would refuse. And they are afraid still more of the door that all must enter, Sultan and nonne,—he who has reached himself and made the threshold pilgrimage, and he who is a taper and is eaten by flies. So it is." He was silent. Hermione saw that his eyes were fixed upon her, and she felt as if he were calmly contemplating her own condition.

"And nevertheless," said the Egyptian, "all that is to come must come, and all that is to go must go, at the time appointed; just as the cloud falls and lifts at the time appointed, and the wind blows and lulls, and tansunin is here and is over."

Again he was silent. Hermione remembered how she had longed to see Emilie with Vere. Why? Why run forward to anticipate the coming of any tale, or shrink back in the effort to avoid it? She felt almost as if she had eaten of a drug.

Artos moved and got up.

"Hermione, it is late, and we must not stay."

The Egyptian was standing.

"I'll come with you to the door," she said. "Perhaps we shall see Vere—my daughter."

She led the way through the house. The Egyptian came close behind her.

"She is not here. Perhaps she is on the cliff."

Hermione was speaking. She looked at the two men.

"Shall we go to the cliff?" said Artos.

They went forward, and almost immediately heard a murmur of voices.

"Vere is with some one," said Artos.

"It must be Raffo. It is Raffo," said Hermione.

She stood still, and the two men followed her example. The night was windless. Voices travelled through the dreaming silence. Don't be afraid. Sing it to me."

Vere's voice was speaking. Then a boy's voice obediently rang out in the song of Mergellina. The obedient voice was soft and very young, though manly. And it sounded as if it sang only for one person, who was very near. Yet it was impersonal. It asked nothing from it, told nothing to, that person. Simply and very naturally it just showed a simple and a very natural song.

"Ohi, dote luna bianca di l' estate

Mi fuggie il sonno accanto a la marina:

Mi desina le dolcissime serate

Gli cerchi di fionia e il mar di Mergellina."

As Artos listened he felt as if he learned what he had not been able to learn that day at Mergellina. Strange as this thing was—if indeed it was, he felt that it must be, that it was ordained to be, and all that might follow from it. He even felt as if Hermione must already know it, have divined it—as if, therefore, any effort to hide it from her must be fruitless or even contemptible, as if, indeed, all effort to conceal truth of whatever kind was contemptible.

The age of the Egyptian was upon him.

When the song was over he turned away. He felt that those two children should not be disturbed. Hermione and the Egyptian fell in with his raprice. At the house door Hermione bade them good-by.

Just as they were going to descend to the landing place Artos saw the form of Giuseppe coming from the cliff.

He had been there too, listening, perhaps from a distance.

All the way back to Naples Artos and the Egyptian never spoke a word.

When the boat touched the landing-stage of the Vittoria, Artos bade him good-by in a sentence. They separated at the top of the steps.

A moment later his figure disappeared in the darkness, going towards the China.

CHAPTER XXIV

The curious strength of the Egyptian's personality, which had so strangely affected Artos had also influenced Hermione. But whereas with Artos the influence lingered, from Hermione it departed. Scarcely had the boat disappeared in the darkness before she found herself wondering at the almost dull calm which for a few minutes had held her, then wondering at something else—the bringing of this stranger to the island by her friend. Why had they come? Who was this man? She remembered that Emilie had not said his name. And then she remembered, too, that his card was lying on the table where she had left it when they went for Vere. She returned to the terrace to fetch it. But the card was gone. Glorina must have carried it away with the coffee and the cigarette-box. But when she was summoned, Glorina knew nothing about it. She took a lamp and searched, but the card was not found.

"It doesn't matter," Hermione said.

Nor did it. Yet she wished she had seen the stranger's name. But she could ask Emilie what it was later on.

Her unrest had returned, and the desire that consumed her remained unsatisfied, although Emilie had come to the island as if in obedience to her force mental summons. It seemed to her almost as if he had brought the Egyptian to protect him, to lead away her scrutiny. And she had not seen him even for a moment with Vere. When would he come again? She might ask him to come for a long day, or she might get Vere to ask him.

Vere must surely be longing to have a talk with her secret mentor, with her admirer and inspirer. And then Hermione remembered how often she had encouraged Emilie, how they had discussed his work together, how he had claimed her sympathy in difficult moments, how by her enthusiasm she had even inspired him—so at least he had told her. And now he was baffling in her child's life an office akin to hers in his life.

The knowledge made her feel desolate, driven out. Yes, she felt as if this secret shared by child and friend had expelled her from their lives. Was that unreasonable? She wished to be reasonable, to be calm.

Calm! She thought again of the Egyptian, and of his theory of resignation. Surely it was not for her, that theory. She was of different blood. She did not come from the bins of the immense East. And yet how much better it was to be resigned, to sit enthralled above the chances of life, to have conquered fate by absolute submission to its decrees!

Why was her heart so youthful in her middle-aged body? Why

(Continued on page 42.)

(Continued from page 36.)

did it still instinctively clamor for sympathy, like a child's? Why could she be so easily and so cruelly wounded? It was weak. It was contemptible. She hated herself. But she could only be the thing she is at that moment hated.

Her surreptitious act of the afternoon seemed to have altered her irreversibly, to have twisted her out of shape,—yet she could not wish it undone, the knowledge gained by it withheld. She had needed to know what Emile knew, and shame had led her to learn it, as she had learned it, with her eyes instead of from the lips of her child.

She wondered what Vere would say if she had been asked to reveal the secret. She would never know that now. But there were other things that she felt she must know; why Vere had never told her—and something else.

Her act of that day had twisted her out of shape. She was angry, and she felt that she must continue to be as she was, that her fearless servile was no longer needed by her, could no longer rightly serve her in the new circumstances that others had created for her. They had been cruel. She could not be open. She was constrained to watch, to conceal—she be aware, in fact.

Yet she felt guilty even while she said this to herself, guilty and ashamed, and then doubtful. She doubted her new capacity to be furtive. She could watch, but she did not know whether she could watch without showing what she was doing. And Emile was terribly observant.

This thought, of his subtlety and her desire to conceal, made her suddenly realize their altered relations with a vividness that frightened her. Where was the beautiful friendship that had been the comfort, the prop of her bereaved life? It seemed already to have sunk away into the past. She wondered what was in store for her, if there were new sorrows being forged for her in the cruel smithy of the great Butler, sorrows that would hang like chains about her till she could go no farther. The Egyptian had said: "What is to come will come, and what is to go will go, at the time appointed." And Vere had said she felt as if perhaps there was a cross that must be borne by some one on the island, by "one of us." Was she, Hermione, picked out to bear that cross? Surely God mistook the measure of her strength. If he had he would soon know how feeble she was. When Maurice had died, somehow she had endured it. She had staggered under the weight laid upon her, but she had upheld it. But now she was much older, and she felt as if suffering, instead of strengthening, had weakened her character, as if she had not much "fight" left in her.

"I don't believe I could endure another great sorrow," she said to herself. "I'm sure I couldn't."

And then Vere came in to bid her good night.

"Good night, Vere," Hermione said.

She kissed the girl gently on the forehead, and the touch of the red silk suddenly made her long to sob, and to say many things.

She took her lips away.

"Emile has been here," she said.

"Monsieur Emile?"

Vere looked round.

"But—"

"He has gone?"

"Gone! But I haven't seen him!"

Her voice sounded thoroughly surprised.

"He only stayed five minutes, and he had a friend with him, an Oriental."

"An Oriental! Oh, madre, I wish I had known."

There was a touch of reproach in Vere's tone, and there was something so transparently natural, so transparently innocent and girlish, in her disappointment, that it told her mother something she was glad to know. Not that she had doubted it—but she was glad to know.

"We came to look for you."

"Well, but I was only on the cliff, where I always go. I was there having a little talk with Ruffo."

"I know."

"And you never called me, madre!" Vere looked openly hurt.

"Why didn't you?"

In truth, Hermione hardly knew. Surely it had been Emile who had led them away from the singing voice of Ruffo.

"Ruffo was singing."

"A song about Margerita. Did you hear it? I do like it and the way he sings it."

The annoyance had gone from her face at the thought of the song.

"And when he sings he looks so careless and gay. Did you listen?"

"Yes, for a moment, and then we went away. I think it was Emile who made me go. He didn't want to disturb you, I think."

"I understand."

Vere's face softened. Again Hermione felt a creeping jealousy at her heart. Vere had surely been annoyed with her, but now she knew that it was Emile who had not wished to disturb the *little note* on the cliff she did not mind. She even looked as if she were almost touched. Could the mother be wrong where the mere friend was right? She felt, when Vere spoke and her expression changed, the sweet understanding from which she was excluded.

"What is the matter, madre?"

"The matter? Nothing. Why?"

"You looked so odd for a minute. I thought—"

But she did not express what she had thought, for Hermione interrupted her by saying:

"We must get Emile to come for a long day. I wish you would write him a note to-morrow morning. Vere, write for me and

ask him to come on Thursday. I have a lot to do in the morning.

Will you save me the trouble?" She tried to speak cheerfully.

"I've a long letter to send to Evelyn Toomey," she added.

"Of course, madre. And I'll tell Monsieur Emile all I think of him for neglecting us as he has. Ah! But I remember: he's been working."

"Yes, he's been working; and one must forgive everything to the worker, mustn't one?"

"To such a worker as Monsieur Emile is, yes. I do wish you'd let me read his books, madre."

"For a moment Hermione hesitated, looking at her child.

"Why are you so anxious to read these, all of a sudden?" she asked.

"Well, I'm growing up and—and I understand things I usedn't to understand."

"For a moment for a moment before her mother's, and there was a silence, in which the mother felt some truth withheld. Vere looked up again.

"And I want to appreciate Monsieur Emile properly,—as you do, madre. It seems almost ridiculous to know him so well and not to know him really at all."

"But you do know him really."

"I'm sure he puts most of his real self into his work."

Hermione remembered her conception of Emile Ardis long ago, when she only knew him through two books; that she had believed him to be cruel, that she had thought her nature must be in opposition to his. Vere did not know that side of "Monsieur Emile."

"Vere, it is true you are growing up," she said, speaking rather absently, as if to give herself time for something. "Perhaps I was wrong the other day in what I said. You may read Emile's books if you wish to."

"Madre!"

Vere's face flushed with eager pleasure.

"Thank you, madre!"

She went up to bed radiant.

When she had gone Hermione stood where she was. She had just done a thing that was mean, or at least she had done a thing from a mean, a despicable motive. She knew it as the door shut behind her child, and she was frightened of herself. Never before had she been governed by so contemptible a feeling as that which had just prompted her. If Emile ever knew, or even suspected what it was, she felt that she could never look into his face again with clear, unflattering eyes. What madness was upon her? What change was working within her? Rebellion came, and with it the passionate desire to combat at once, strongly, the new, the hateful self which had frightened her.

She hastened after Vere and in a moment was knocking at the child's door.

"Who's there? Who is it?"

"Vere!" called the mother.

As she called she opened the door, and found it locked.

"Madre! It's open!"

"Yes. May I come in?"

"One tiny moment."

The voice within sounded surely a little startled and uneven, certainly not welcoming. There was a pause. Hermione heard the rustling of paper, then a drawer shut sharply.

Vere was hiding away her poems!

When Hermione understood that she felt the strong, good impulse suddenly shrivel within her, and a bitter jealousy takes its place. Vere came in the door and opened it.

"Oh, come in, madre. What is it?" she asked.

In her bright eyes there was the look of one unexpectedly disturbed. Hermione glanced quickly at the writing-table.

"You weren't writing my note to Monsieur Emile?" she said.

She stepped into the room. She wished she could force Vere to tell her about the poems, but without asking. She felt as if she could not continue in her present condition, excluded from Vere's confidence. Yet she knew now that she could never plead for it.

"No, madre. I can do it to-morrow."

Vere looked sad and surprised, and the mother felt more than ever like an intruder. Yet something dogged kept her there.

"Are you tired, Vere?" she asked.

"Not a bit."

"Then let us have a little talk."

"Of course."

Vere shut the door. Hermione knew by the way she shut it that she wanted to be alone, to go on with her secret occupation. She came back slowly to her mother, who was sitting on a chair by the bedside. Hermione took her hand, and Vere pushed up the edge of the mosquito curtain and sat down on the bed.

"About those books of Emile's—" Hermione began.

"Oh, madre, you're not going to— But you're promised!"

"Yes."

"Then I may?"

"Why should you wish to read such books? They will probably make you sad, and—and they may even make you afraid of Emile."

"Afraid! Why?"

"I remember long ago, before I knew him, I had a very wrong conception of him, gained from his books."

"Oh, but I know him too-forehand. That makes all the difference."

"A man like Emile has many sides."

"I think you all have, madre. Don't you?"

Vere looked straight at her mother. Hermione felt that a moment had come in which, perhaps, she could force the telling of that truth which already she had known.

"I suppose so, Vere; but no need to—surely keep any side hidden

GRAY MOTORS

from those we love, those who are nearest to us."

Vere looked a little doubtful—even, for a moment, slightly confused.

"N—o?" she said.

She seemed to consider something. Then she added:

"But I think it depends. If something in us might give pain to any one we love, I think we ought to try hide that. I am sure we ought."

Hermione felt that each of them was thinking of the same thing, even speaking of it without mentioning it. But whereas she knew that Vera was doing so, Vere could not know that she was. So Vere was at a disadvantage. Vere's last words had opened the mother's eyes. What she had guessed was true. This secret of the poems was kept from her because of her own attempt to create and its failure. Abruptly she wondered if Vere and Hermione had ever talked that failure over. At the mere thought of such a conversation her whole body tingled. She got up from her chair.

"Well, good night, Vere," she said.

And she left the room, leaving her child amazed.

Vere did not understand why her mother had come, nor why, having come, she abruptly went away. There was something in the matter with her mother. She had felt that for some time. She was more conscious than ever of it now. Around her mother there was an atmosphere of unrest in which she felt herself involved. And she was vaguely conscious of the new distance between them, a distance daily growing wider. Now and then, lately, she had felt almost uncomfortable with her mother, in the sitting-room, when she was saying good night, and just now when she sat on the bed. Youth is terribly quick to feel hostility, however subtle. The thought that her mother could be hostile to her had never entered Vere's head. Nevertheless, the mother's faint and creeping hostility—for at times Hermione's feeling was really that, though she would doubtless have denied it even to herself—disagreeably affected the child.

"What can be the matter with mother?" she thought.

She went over to the writing-table, where she had hastily shut up her pen and ink, and unlocked the door, but she did not take them out again. Instead she sat down and wrote the note to Monsieur Knibb. As she wrote the sense of mystery, uneasiness, discomfort from her, chased away, perhaps, by the memory of Monsieur Knibb's kindness to her and warm encouragement, by the thought of having a long talk with him again, of showing him certain corrections and developments carried out by her since she had seen him. The sympathy of the big man meant a great deal to her, more even than he was aware of. It lifted up her eager young heart. It went the blood coursing through her veins with a new and ardent strength. Hermione's enthusiasm had been inherited by Vere, and with it something else that gave it a peculiar vitality, a power of lasting—the secret consciousness of talent.

Now, as she wrote her letter, she forgot all her uneasiness, and her pen flew.

At last she signed her name—"Vere."

She was just going to put the letter into its envelope when something struck her, and she paused. Then she added:

"P.S.—Just now sister gave me leave to read your books."

(To be continued.)

At Commencement Time

A SMALL sectarian university in the South had finally succeeded in obtaining the presence of a well-known bishop to grace its Commencement exercises.

"Now that we have you here, Bishop," announced the president of the institution as he greeted the honored guest, "we are going to give you a degree. What will you have?"

"What have you got?" inquired the bishop, with a sly twinkle.

"We have LL.D., S.T.D., B.L.D., and D.D. You may take your choice."

"Well," answered the bishop, "I think you may make it D.D. I have fewer of those than I have of the others."

THROUGH experiment and experience—to Goodrich Tires: that is the tire history of thousands of automobilists—but it need not be your history. You can eliminate the experiments and the expense by examining the Goodrich record of service; by learning the road results of the Goodrich "tough tread" and Goodrich "integral construction" on every street and highway in America. Start with a Goodrich equipment and you will finish with it. We shall be glad to explain Goodrich construction and furnish evidence of Goodrich superiority on request.

The Chemistry of Commerce

By ROBERT KENNEDY DUNCAN
Author of "The New Knowledge"

The Chemistry of Commerce is a graphic narrative of the wonderful work of applied chemistry in the industrial world to-day. It affords an engrossing story of the invention and manufacture of commodities that are close to the business or home interests of each one of us. It is packed with information upon such topics as the making of artificial rubies and diamonds, of non-breakable Welsbach mantles, of the distillation of perfumes in quantities sufficient to float a frigate, of the coloring of glass, of the engineering feats accomplished by high temperatures, the preparation of drugs like camphor and quinine, the extraordinary future of industrial alcohol. Professor Duncan—himself a student of science and a practical chemist—spent a long time of study abroad and secured his material personally from famous chemists at work in their laboratories.

THE MAKERS OF The American Nation A History

An entirely new work, seven years in the making.

The work of author-scholars from twenty universities.

Edited by Albert Bushnell Hart, Professor of History, Harvard.

With the co-operation of four state historical societies.

The first American Historical Atlas—186 special maps.

The standard work—of value for all time.

Harper & Brothers, for 91 years publishers of books, believe this is their greatest achievement.

"This is the only history dealing with every field of our national life. Our political, economic, religious, industrial, financial, and social life is set forth side by side and in their relation one with another."

The careful selection of authors who could write brilliantly as well as with scholarship and insight has made it possible to carry the story of America through volume after volume with the glow and spirit of romance. It is, above all—interesting.

"The reader who possesses these volumes has before him the choice output of modern scholarship of American history."—N. Y. SUN.

"The American Nation' adds another, and perhaps the best, to the long list of histories of the United States, in whole or in part."

—SPRINGFIELD (MASS.) REPUBLICAN.

"A scholarly work in popular style."—N. Y. TIMES.

HARPER & BROTHERS, PUBLISHERS, NEW YORK

From
Original Sources

The volumes are of crown-octavo-size, in two styles of binding: (1) Red polished buckram, stamped in gold, with dark-blue leather labels; (2) Persian half-morocco of a rich crimson, stamped in gold, with cloth sides and special end-papers. Gilt tops, untrimmed edges, head-bands, etc.

Send us the coupon and let us mail you—absolutely without cost—our 32-page booklet, which shows why this history is better than all other histories combined. It contains sample pages, illustrations, and maps. Send the coupon to-day.

JUNE 20 1908
PRICE 10 CENTS

THE NEXT ISSUE OF

Harper's Weekly

WILL BE A

Special Convention Number

HARPER'S WEEKLY will tell in its next issue the story of the progress and results of the National Republican Convention at Chicago, from impressions derived on the spot. There will be sketches and cartoons by E. W. Kemble, who will picture the Convention exclusively for us.

Beginning with the next number, HARPER'S WEEKLY will be restored regularly to its original size—the pages will be nearly one-third larger than at present. It promises to be interesting.

THE BEST GOLF BOOK

Practical Golf

By

WALTER J. TRAVIS

Mr. Travis, who won the amateur golf championship of the world, gives in these practical papers the results of his own experience and practice. Mr. Travis is not only a player, but a student of golf. He has worked out its principles for himself, and in this manual he has set them down in order for the benefit of others.

The book is profusely illustrated from photographs. Crown 8vo. 200 pages. Price, \$2.00 net

COMMENT

Taft

EVERY click from Chicago that drops from the wires as the WEEKLY goes to press says "Taft." All plans that favor him have gone through thus far with scarcely a hesitation, much less a hitch. If they have a fault, it is that they are too perfect, operate with too mechanical a smoothness, and impair too frankly the illusion that the convention is to be an assemblage of delegates to select Republican candidates for the Presidential ticket. The delegates may select the candidate for Vice-President, but for first place their duty is, evidently, not to choose a man, but to nominate the candidate already chosen. That they will perform this duty there is no present reason to doubt. All the rosters for Taft and most of the objections to him seem to be agreed that the sooner the deed is done the better. There are other candidates that the objectors prefer, but between them and their choices comes a possibility that makes the certainty of Taft look like blessed relief. Everybody knows the situation. The objectors would far rather take Taft and have done with it than run any risk of getting Senator Boies's candidate. So they are for Taft, with deep sincerity if not with enthusiasm, and for Taft they are likely to stick. Sure but consenting, they watch the execution of the measures preliminary to the nomination of the man whom they do not prefer as compared to some others, but eagerly prefer as compared with the possible candidate of a stampeded convention. They cannot even complain of the efforts of the Taft supporters to make everything sure beforehand. That at least agrees good faith, and they bow to the argument. And so, though nothing is quite certain until it is accomplished, and though a good deal may happen in a week, Judge Taft seems sure to get the nomination.

The Vice-Presidency

The delegates can do something for the country, even if it does not afford them the highest degree of entertainment, by nominating a competent man for Vice-President. Perhaps if they are able to fix upon the head of the ticket with the minimum of mental effort, there will be the more energy available to draft a proper person for the second place. There has been at least one volunteer for the position, Mr. JONAS HAYMOND, an able man, to be sure—the ablest in his own line in the world, and of a mind of undoubted competence in other pursuits besides his specialty. But Mr. HAYMOND is a sailing engineer, and of very slight experience in American statecraft. The Vice-President ought not to be a green hand at government. The delegates should conscientiously choose a candidate by whom, if need be, the great powers of the Presidential office would be safely administered. Vice-Presidents who have become Presidents have made a great deal more than their fair proportion of the history of our country. Name such a Vice-President at Chicago, gentlemen, that if he gets a chance to make some history, you will like the kind of history he makes. To our mind, Senator CRANE would very handsomely and usefully adorn the Republican ticket.

tiously choose a candidate by whom, if need be, the great powers of the Presidential office would be safely administered. Vice-Presidents who have become Presidents have made a great deal more than their fair proportion of the history of our country. Name such a Vice-President at Chicago, gentlemen, that if he gets a chance to make some history, you will like the kind of history he makes. To our mind, Senator CRANE would very handsomely and usefully adorn the Republican ticket.

"Fairbanks and Fair Play"

A correspondent writes to the WEEKLY from Attleboro, Massachusetts, to say:

I cannot comprehend why you pick at, as to speak, pictorially, Mr. FAIRBANKS. It must be that you consider him second to the best, as his office implies. He is a capable man. His wife has initiative (he has evidently longevity), and almost every capable man is fit for the Presidency. Possibly a cocktail or two may have hurt him, but only in the estimation of the most bigoted. Why not FAIRBANKS and Fair Play for a standard to win?

At this writing the news is that Mr. FAIRBANKS has stopped trying, on the ground that he can't get Fair Play on the ticket. To contribute longitude to the tail of a ticket for which Mr. TAFT furnishes the latitude does not appeal to him. Well, Mr. FAIRBANKS is a capable and careful man and still young. He has been a good Vice-President, has presided well in the Senate, and has helped to allay the anxieties of the people when the President has taken chances with unruly colts. But few men want a second term as Vice-President, and the other piece on the Republican ticket is engaged.

For a Plank in Defence of the Courts

This petition was sent to the Committee on Resolutions of the Chicago convention:

The undersigned Republicans, having in mind the attack upon the courts made by the platform and the candidate of the Democratic party in 1906, and having reason to believe that a similar attack is contemplated in the Presidential campaign of 1908, do earnestly request the committee on resolutions to include in its report to the Republican national convention the following declaration:

"We affirm our confidence in the integrity and justice of the courts, State and national, and we insist that the preservation of their independence and full constitutional prerogatives is essential to the maintenance of the American system of government."

NICHOLAS M. BUTLER,
 CHARLES ANDREWS,
 CORNELIUS N. BAIRD,
 THOMAS L. JAMES,
 JOHN L. CARWALADER,
 JOHN A. STEWART,
 D. O. MILLS,
 WILLIAM N. COHEN,
 JAMES M. TAYLOR

JOSEPH H. CHAMPE,
 WILLIAM J. WALLACE,
 BENJAMIN F. TRACY,
 JOHN W. GIBSON,
 EDWINE WETMORE,
 EDWARD MITCHELL,
 A. HARTON HERRICK,
 RUSH RILEY,
 ALBERT K. SMILEY

The "attack upon the courts" made in the Democratic platform of 1896 read as follows:

We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions, and we especially object to government by injunction as a new and highly dangerous form of oppression by which Federal judges in contempt of the laws of the States and rights of citizens, become at once legislators, judges, and executioners, and we approve the bill passed in the local session of the United States Senate and now pending in the House of Representatives relative to contempt in Federal courts and providing for trials by jury in certain cases for contempt.

The signers to the petition include four former cabinet officers, former judges of distinction, college presidents, lawyers of the highest reputation, and capitalists who have never been classed as malefactors. The names are very good names, and carry as much weight as though there were a hundred times as many of them. Without doubt the petition will get respectful notice from the platform-makers.

Rest for the Weary

When is Secretary Taft going to get his vacation? He has four or five jobs, any one of which could keep him busy, and has been running for the Republican candidate besides. The chances that he will have a quiet summer are not good. The most restful thing we see ahead for him is the thought of Mr. ROOSEVELT penetrating the wilds of Africa. A vicious

vacation is better than none, and Mr. TART will undoubtedly get vicious repose out of Mr. ROOSEVELT'S mid-African penetrations. No doubt they will be restful also to Mr. ROOT, whose summer plans, as announced in the papers, include an interval of violent recuperation at Mt. Wilson's, and then rurality and repose in Oneida County, New York. Mr. ROOSEVELT'S proposed bolt to Africa after the 4th of March is an exceedingly interesting and characteristic project. Let us rejoice that there remains a space of earth sufficiently unwearyed by civilization to give rest to his untrammelled spirit. Here's hoping that nothing will interfere with that plan, and that Mr. ROOSEVELT may make up such a bag of lions, elephants, hippos, gorillas, rhinos, nature-fakes, and animal nucleofactors as never before gladdened the heart of imperial man.

Adjourned to Chautauque

Senator LA FOLLETTE is not satisfied with his exertions in the Senate, where he projected oratory to the extent of eighteen pounds of printed discourse against the emergency currency bill. Being shot off by the alert Mr. ALDRICH while his fountains of living speech were still unquenched, he has adjourned the debate to Chautauque, where he promises to deliver a hundred lectures about it in the course of the summer. That is fair. Attendance on the lectures will be voluntary, and if the Senator can get auditors to sit under him of their own free will and at their own cost, there is no reason why he should not free his mind absolutely on the emergency currency bill. The people need to have the currency question brought home to them; maybe he can help bring it home.

Revolution in Georgia

The defeat of HENRY SMITH for Governor of Georgia furnishes thoughts for the thoughtful. He was elected two years ago to enforce strict regulation of railroads and strict prohibition. He did both to the best of his ability, and was beaten for re-election by a man whom as Governor he turned out of the office of railroad commissioner because he was loath to do what the people of the State wanted done. That is undoubtedly interesting. Mr. W. W. WINSTON, of the Georgia Legislature, can hardly wait for the Georgia Legislature to convene so that he can introduce a bill to repeal the Georgia State prohibition law. He voted for the law, but suspects, since Governor SMITH'S defeat, that the people of Georgia don't like it as well as they thought they would.

Barre Henry

MORSE HENRY continues to be a pessimist on prohibition. Thus the *Courier-Journal*:

"The new South," says the *Washington Star*, "turns its back upon the lobby and the jury." True, alas, too true! In Georgia they are drinking straight from the jug at present.

He is also a pessimist about being a candidate for Vice-President, and when the *Omaha Bee* asks: "What is the matter with HAYES and WATERBURY for the Denver ticket?" the *Courier-Journal* says:

Nothing except that he doesn't want it and that nobody wants him, and that because he wore a gray jacket his nomination would defeat the ticket and at the same time disgrace him, by giving the lie to his profession of disinterestedness.

Strong reasons, but all unsound except the first one.

New York Judges Are Well Paid

At the dinner given in New York to Judge LEVENTHURST on his retirement from the bench the sentiment was pretty generally disclosed by the speakers that the salaries paid were inadequate to keep valuable judges on the bench. In so far as this applies to the salaries of \$17,500, which the justices of the Supreme Court receive in this district, it may be true, but the fault is not in the salaries. They are high enough. If the justices, when they have acquired reputation on the bench, think they can earn much more in private practice and wish to do it, they will resign, and no moderate and justifiable increase in the salaries will stop them. The salaries paid are more than most of the justices are worth when elected. After they have learned the law at the public cost they are often worth more than they get. When that condition has

been duly brought home to their inner consciousness they are apt, if they want more money, to resign.

Clemenceau's Luck

"ROOSEVELT'S luck," which has become a current American phrase, is being paralleled in France. With a narrow majority of 150 against 107 votes in the Senate, Premier CLEMENCEAU decided to transfer the body of EMILE ZOLA to the Pantheon. This did not wholly please the French people, on the ground that such an act was deemed premature; it was generally felt that at least ten years should elapse between the death of ZOLA and the Pantheon ceremony. The shot fired by the crank GREGORY, however, brought about a complete revolution of feeling. The populace is again with CLEMENCEAU. Thus DREYFUS, whose cause virtually landed M. CLEMENCEAU in the Premiership, has now virtually brought back to him the support of the people. That is why the Premier's luck is becoming proverbial, and the title of "CLEMENCEAU *le Perpetuel*" has been freely granted him.

Don't Bring Her Here

Bring Phila to New York.—*Newspaper Headline.*

No, don't. Leave Phila where she is. If she were light on her feet and could win a horse-race or dance scintillatingly; if she could sing so that you forgot what the box office charged you; if she could cook something that we had not had a chance to try of yet; or if she had written and dramatized an improper story—this might be a good town to bring her to. But Phila is neither a race-horse, a dancer, a singer, a cook, nor a sensation-monger. She is ruins, now located in Egypt, and either immersed, or to be immersed, in the waters of a dam. If anything is to be done about her, she should be hauled ashore in Egypt and set up in a dry place, where she has old friends and knows and likes the climate. In New York— But probably it was only a joke, the Dublin cable that said: "RICHARD CAWKEN is very much in earnest, and is enthusiastic over the idea of transferring the ruins of Phila, Egypt, to Central Park."

Nemesis Again

The person named Nemesis, so much respected by the ancients, is still to be found, it seems, by persistent evil-doers, doing business at the old stand. One ACESITZ, a doctor, born in Budapest, but a practitioner and the owner of a private hospital in New York, was shot by a young woman on June 7. This doctor's record, or a part of it, has been printed in the papers. In 1904 he was named as correspondent in a divorce case. In 1907 a girl tried to shoot him in his office. She accused him of attacking her while she was his patient. She took her case to court, but her complaint was dismissed. Next his hospital was complained of to the Board of Health, but he satisfied the authorities. Next, SARAH KOTEN had him before the Court of Special Sessions on a charge of assault. Witnesses appeared for him, and he was discharged. SARAH is a Russian. A baby is due to be born to her in a few months. She waited eight hours on a doorstep for ACESITZ, and when he came shot him twice through the heart. She said (so the papers reported): "My father is dead; my mother is dead. I knew that I must take my revenge for my honor. The courts would not give it to me." The courts apparently had had two chances at ACESITZ, but had not improved them. Here is a fresh and striking example of how New York's high homicide record is maintained by persons of foreign birth. It is not realized that New York is, among other things, a frontier settlement constantly overrun with new settlers from Europe.

New York Society

Those are very interesting sentiments about New York Society that were communicated to the Sunday World of June 7 by Mrs. STEVENSON FISH. A very social citizen, Mr. FREDERICK MARTIN, who has a strong natural bent for making his fellow creatures happy, had been saying in the papers that New York Society is in a transition state, and rapidly reorganizing itself on a much broader basis than it has ever had before. Fit people are to count for more in it, Mr. MARTIN says, and money for less. He thinks money counts for less to-day in New York than in any great city in the world, and that New York is too big now to be ruled by mere money. It has been "set"-ridden, but the power of the "sets" is passing. To be set-ridden, says Mr. MARTIN, is to be bored; to be bored means to be unsatisfied. And he adds:

The very fact that society in New York is untroubled in the most satisfactory thing about the transitional stage through which we are now going. When we get genius, success, cleverness, tact, self-control, assembled in one great social body, then we shall have real society. And New York is fast approaching that happy day.

Mrs. First, being solicited by the *World* to shed the light of her abundant experience on Mr. MARTIN'S views, does it coo more and with vigor to the extent of a couple of broad columns of the *World's* space. Mr. MARTIN is right, she says. "To be rich alone is not enough. There is plenty of people who have both brains and money. We must not bar them. But the time should come when brains will count for more than mere money. Mere money is raising Newport to-day. We must have a larger Society—a Society in which something else counts. But where are we going to get it? All these interesting people that Mr. MARTIN talks about, where are they? Where are we going to get them? I don't see very many of them. It would be a great relief if we could only ferret them out of their lairs and bring them into Society."

Where Are the Fit People?

No, Mrs. First; and to her question it is not easy to give an answer that is practically helpful. There are a great many people in New York, and among them a great variety of people who are interesting and agreeable. But most of them are already as much in society as they care to be; as much as they can spare the time or the money to be. Nothing develops the faculties like exertion. But by far the most general and stimulating motive for exertion is to get a living. We believe hardly any one will deny that a large majority of the more interesting and profitable folks in New York are to be found among the people who have to work for a living. Such people, especially those who practise an art or a profession, have to keep alive; have to keep their wits alert. But most of them can only spare a limited amount of time and energy for society, and, as a rule, they get already about as much as they can afford. Participation, except very moderately, in such society as Mrs. First knows would seem to most of them ruinously unprofitable. There would be nothing in it for them that would be worth the effort, let alone the modest cost of clothes and calls; and those of them that are sensible know that if they were once caught in the whirl of fashionable competition it would be all up with them at once. Society (with the big S) in New York did not come to be a combination of rich people because of mere perversity, but because New York is in the main a city of workers, and only the hardier and tougher of them and those who are fortunate in getting large returns for moderate labor could possibly afford to cultivate Society. The reliance of Society in a great metropolis must be folks who are living on accumulated money, and have enough of it,—don't have to work hard enough to make them very tired, nor worry about their bills and how to pay them. If some of them are dull, and some of them are vulgar, and many foolish and many selfish, so much the worse for Society with the big S.

Freedom and Kindness and Grit

But anybody with wit enough, rich or moderately impetuous, in Society or not, ought to be able to find playmates to suit them in New York. Mrs. First seems to understand her subject. She says: "If there were a little more kindness shown in New York Society, there would be more real hospitality—which means real Society. Real hospitality is kindness." That is perfectly to the point, and we suppose it is to the point also when she says that Newport, which once was delightful, has been spoiled by "climbers" and "ridiculous little people who think themselves queer," and that New York Society is "dreadful, most of the time," and that the trouble with it is that "everybody in New York is afraid; they are all afraid of themselves." That is a very serious trouble, and argues too many people who have no sure standards of their own and no true understanding of what they ought to be about. Their great business in Society is to have some fun, swap ideas, and make life more profitable for one another and for people generally. But there can't be real sport without freedom and kindness and courage. A Society that is afraid of itself isn't of any use. But who ever attains freedom from mean fears, and courage to do what seems good, and kindness to keep from hurting others, can always have fun, and always find fit souls to share it with.

The Latest Word About Democratic Candidates

THE June number of the *North American Review* devotes its first fifty pages to an impartial presentation of the respective claims of the ten most conspicuous candidates for the Democratic nomination to the Presidency. The writing of each article in the series is lightly entrusted to one known to be a sincere and earnest believer in the intrinsic merit and availability of the public man whose claim he has been invited to set forth. For example, the champion of WILLIAM JENNINGS BRYAN, who fittingly heads the list as having been twice the nominee of the Democratic party, and as having had already a majority of the delegates to the National Convention at Denver instructed in his favor, is Mr. AUGUSTUS THOMAS, who, on the score of his knowledge, argumentative ability, and zeal, shows himself well-qualified to perform his appointed task. Especially noticeable also, is the expository alidity with which are set forth the grounds on which the National Democracy is urged to consider the expediency of putting forward as its standard-bearer Governor JAMES A. HARMON, of Minnesota; Governor JOSEPH W. FOLK, of Missouri; ex-Attorney-General JESSE HARMON, of Ohio; and Judge GEORGE GRAY, of Delaware. It is worth while to indicate very briefly the principal points made on behalf of each of the ten candidates named by the *Review*. We may say at once of all the writers that none of them, in his eagerness to uphold the cause of his favorite, allows himself to disturb party harmony by indulging in unfair criticism of competitors.

We would not dispute the assertion, made by Mr. THOMAS that Mr. BRYAN is personally known to a greater number of Democratic voters than any three other candidates combined. It is true that in the last twelve years—that part of them which was spent abroad being, of course, excepted—the majority of his Sundays have been occupied by the delivery of addresses and sermons to religious congregations of mixed political beliefs. Mr. THOMAS thinks that a conservative estimate would put the number of voters, members of religious organizations, who have listened to Mr. BRYAN on Sundays during the period named, at 250,000, to which must be added the number of citizens—counting by Mr. THOMAS at a million—who have attended the lectures given by Mr. BRYAN in his regular tours, to say nothing of the political gatherings at which he has spoken. Mr. THOMAS recognizes, however, that the possibility of electing a Democratic President next November depends upon a candidate's ability to attract accessions from the Republican ranks. He apparently admits that such accessions could not be secured by Mr. BRYAN from the conservative wing of the Republican party. He thinks they might be got by Mr. BRYAN from the Roosevelt wing of the party; but how would that be possible if President ROOSEVELT should take the field for TAYLOR?

Passing over the honored names of Senator EDWARD W. CARMACK, of Tennessee; of Senator CHARLES A. CULBERSON, of Texas; and of Senator JOHN WARWICK DANIEL, of Virginia, for no other reason except because, however worthy of a Democratic nomination for the Presidency each of them may be, none of them is known to have authorized a concerted movement on his behalf, we come to the name of Governor JOSEPH W. FOLK, of Missouri, who, undoubtedly, could be trusted to fulfil one of the conditions of availability—namely, he could carry his own State, which, otherwise, might be a doubtful one, since ROOSEVELT swept it four years ago. This cannot be said of Mr. BRYAN. He differs also from Mr. BRYAN in this particular, that instead of confining himself to promising, he has accomplished reforms. He can point to a record not of aspirations and intentions, but of achievements. Judge GEORGE GRAY, of Delaware, is another candidate who, undoubtedly, could carry his own State, although for many years it has gone Republican. It is equally beyond dispute that, next to WILLIAM J. BRYAN, GEORGE GRAY is, perhaps, better known to the whole American people than any other Democratic candidate by reason of the many public offices which he has occupied—that of Attorney-General for Delaware, that of United States Senator from his native State, that of Canadian Joint High Commissioner, that of Paris Peace Commissioner, that of United States Circuit Judge, and that of Chairman of the Anthracite Coal Strike Commission. By the discharge of his duties in these various capacities he has powerfully commended himself to all classes of voters; to vast bodies of wage-earners, as well as to the rank and file of men engaged in business enterprises.

If, now, we pass over the article devoted to JESSE HARMON, which is exceedingly well done, it is only because it seems to be an example of Jane's labor lost, seeing that what Judge HARMON most desires for the moment is to be Governor of Ohio. We turn to the strong plea made by Mr. T. D. ILLIEN for the nomination of Governor JAMES A. HARMON, of Minnesota, on the ground that he is the most available candidate the Denver convention could select. He has shown himself able to carry his own State even in a Presidential year, and it is probably true that, if he were the candidate of the Democratic party for President, he would not only be triumphant there, but would accomplish the same result in Michigan, Wisconsin, the two Dakotas, Colorado, Oregon,

and Washington. He has so many elements of strength that his advocates find it impossible to analyze them all within the limits of an article in the *Review*, and restricts himself to asserting that a Democrat is the prime of life who has succeeded in everything he has undertaken; who, as Governor of his own State, has compelled the admiration of his opponents; and who in his private or public life has nothing for which to apologize, given the very highest promise of success in a national contest. It is equally true of Mr. HENRY WATKINSON that for nearly forty years he has represented the best thought of the South. Indubitably he has stood by his convictions with a devotion that has known no rest, and with an unflinching courage which would not yield as inch to sectionalism or faction, where these seemed to him to be the wrong, and he has lived to see every position for which he has fought valiantly vindicated by events.

Wesmore WILSON, the president of Princeton University, is truthfully described in the *North American Review* as of Virginia and New Jersey. By birth a Virginian, he is by adoption a Jerseyman. Born, bred, and schooled in the Old Dominion, he, like JAMES MADISON, graduated from Princeton, after which he studied law in the University of Virginia, and began the practice of his profession in Georgia, where he married a native of Savannah. Impelled by his parental foster and impulses to transfer his energies from the forum to the field of the higher education, he became successively a professor of history and political economy in Bryn Mawr College and in Wesleyan University; then a professor of jurisprudence and politics at Princeton; and, finally, since August, 1902, he has been the president of the last-named seat of learning and of science. It is unquestionably true, as the *Review* avers, that he is held in the highest honor by every Princeton graduate, and by all university men in the United States. By his published historical and political writings he has impressed a multitude of thoughtful citizens with the conviction that, by instinct and education, he is a statesman. He has given abundant evidence of modesty and presence in public affairs worthy of Virginia's noblest traditions. It may be affirmed of him with confidence that he could carry every State south of the Potomac and the Ohio, together with Missouri, Arkansas, Louisiana, Texas, and Oklahoma, as well as Delaware, Maryland, New Jersey, New York, and Connecticut. Nor would it be at all surprising, especially if Governor Jackson should be named for Vice-President, if he should also prove victorious in Minnesota and North Dakota, if not also in some other Northwestern commonwealth.

Nothing Abides

THE most poignant sorrow of maturity is, perhaps, the insistent realization, usurping so intermittently perception, of the truth that all things pass and nothing abides. From time to time the thought has clouded the sunshine of life as we moved along through the years and noted that the environment was unstable and did not move in even current with us. The *mise en scene* of life, indeed, is perpetually shifting; and, also, even the *dramatis personae* refuse to remain unchanged so that we can build a logical structure out of the play of life.

"Like driftwood spears that sunset and pass"

Upon the boundless ocean plain,

is a true picture of the swift moments of life's intercourse. Let any careful homemaker who files away personal letters turn back a score of years and see who were his correspondents then; and he is a fortunate man who has saved a spare half dozen of the same friends to warm his soul with a sense of kindred memories and associations. Every blossom in a garden that blooms and fades and dies gives us a momentary footnote of life as but a progressive disintegration and dissolution.

As we begin to see ourselves passing the blossoming point, fading a little, with power waning, the sense is more insistent, the picture more vivid and definite. We are floating gently adown stream, and on either side swift currents are bearing out of sight the familiar and the loved, and beyond, far beyond, stretches the shadowy sea, vast, unfathomable, strange and yet alluring, in which all currents are indistinguishably lost, and in the end we shall all be there, and what will be left then of the individual life and its affections?

"Passing away! passing away!" is the burden sighed out on the wind's voice: it is the theme of the ocean's plaint as the ebbing tide pounds the shore and recedes. Bunches and pines sing the song as they sway rhythmically along the lake side; and the bonneted little garden, blithe and gay as it is, begins at this time of year to shed withered petals over the beds, and it must be an industrious gardener who keeps out of sight all the witnesses to the mutability of life.

"Passing away! passing away! we surprise the thought in our friend's eyes as he turns to go, in the shadow behind a child's smile. It is the echo of our glided experiences, the sober, home-worn song of the day's closed pleasures. Passing away! we understand it by the supping of our strength and ambitions. The red plain of life, with its struggles and temptations, is traversed, and

we are set on the gray and misty peaks that make for the sea. The evolution process has been running its course, and we, but half awake to life, have unawares conspired with it. And now, muffled with the loss of time and travel, we take account of the little any left to go with our quieted, somewhat tired hearts.

Life is largely a matter of distractions. By force of many activities we turn our consciousness from the hooks of time, and that level of contemplation which is the "station for the flight of soul" is so rarely reached that we only intermittently face the true nature of what is happening to us. But at least, when we do, the sense of the continual passing does something toward warning us from the dull use and wont of life; and because each moment of beauty or content or satisfaction is but a melting moment, slipping into the past and irremediably lost even as we look at it, we are doubly initiated into the high seriousness, the solemn import, of life which alone can sanctify character. And what a reconcealer mutuality is! Even our sorrows have something precious about them when we realize that they, too, will pass, and the time will come when the pain we are facing will be summed past recognition. Maximize many hopes and dreams, philosophies and conjectures, console us as we flee the eternal pain. Each man makes attempt to stay himself upon some point of stability, some abiding principle which shall stay his sense of impotence in the sweeping currents.

When Seneca has understood the superficial rhetoric of the times in argument, overthrown the intrepid Boethius, and finally completely refuted the evil and worldly Caelianus, he thus sums up the whole case against rhetoric, flattery, and worldliness.

"And of all that has been said, nothing remains unshaken but the saying that to do injustice is more to be avoided than to suffer injustice, and that the reality and not the appearance of virtue is to be followed above all things, as well in public as in private life; and that when any one has been wrong in anything, he is to be chastised, and that the next best thing to a man being just is that he should become just, and be chastised and punished; also that he should avoid all flattery of himself as well as of others; of the few as of the many; that rhetoric and any other art should be used by him, and all his actions should be done, with a view to justice."

"Follow me, then, and I will lead you where you will be happy in life and after death, as your own argument shows. And never mind if some one despises you as a fool, and insults you, if he has a mind to let him strike you, by Zeus, and do you be of good cheer, and do not mind the taunting blow, for you will never come to any harm in the practice of virtue if you are a really good and true man. . . . Let us, then, take this discourse as our guide, which signifies to us that the best way of life is to practise justice and every virtue in life and death. . . . And I exhort you also to take part in the great combat which is the combat of life, and greater than any other conflict."

It is strange to think that these words, spoken twenty-two centuries and more ago, should still have such power of stirring us, as we repeat them to-day side by side with the Hermitian statement: "All things move and nothing abides." "You will never come to any harm in the practice of virtue."

Here, then, we return to the point of stability in the universal flux: to the one solace in the midst of the sorrows of fleeting life. We may lose our friends and our possessions; our interests may wane and our hopes grow dim; disappointment may take us at unawares around any corner, but such virtue as we have managed to acquire and set late activity in the world will not fail us. We shall not regret it. It will not desert us in this life or the next one, whatever that our may prove to be: or if there be none, yet it shall be better for us to lay down the life and the activity of a good man than of a bad one, and better to leave the good man's record living in the world from which we go.

There is, then, a realm of stability in this world in the face of all prospects, in the continuous dissolution and transformation of life, there is an abiding truth to hold to—in as far as we acquire and practise virtue we shall not be discomfited.

Not the least of the rewards of virtue is the quiet heart that notes the beauty of life as it passes; taking in here and there and building up into the general consciousness those exquisite moments of radiant color, perfect form, or vivid gesture which heighten the powers of enjoyment, and provide, with the best of art, the perfect round. Such beauty, taken in as it is by the powerful mind almost at unawares, is in itself a recompense for sadness, for thwartings, for the fleeting shows of life.

Virtue alone, too, can build those altars to the affections and fidelities that outlast all the robberies of destiny, compensate for suffering, loneliness, and man's feeble hold upon the objects of his desire. Virtue alone is austere and unrelenting enough to make uncompromising investigation into the true nature of life, and to find in the answers to search that richness of self which gives us our first sense of *raison d'être*; for we are endowed with individuality, apparently, to lay it down and to find every man's fate as vital as our own.

And so realizing that all things pass and nothing abides we may yet stay ourselves on the principle enunciated once and for all by

the great Greek moralist: "I am persuaded of these things, and I consider how, too. I shall present my soul whole and undefiled before the judge in that day. Renouncing the honors at which the world aims, I desire only to know the truth, and to live as well as I can, and when the time comes, to die. And to the utmost of my power I exhort all other men to do the same."

Personal and Pertinent

MADAME NOMICA in Boise, Idaho. She registered at the Idem Hotel in that city under the name of Mrs. NEMROS. A reporter from a local paper discovered her, however, and she was induced to grant him a short interview. Madame Nomica declares that she is in Boise for a quiet rest, and that she has no mixing or other business to look after in these regions. She is accompanied by her man of business, a gray-haired gentleman, and her young colored men attendant. She attended the afternoon performance of a circus on May 25, escorted by the two men just mentioned. She seemed to be thoroughly enjoying her informal freedom, and smiled continuously. After she was settled on the wooden circus seat, her young colored attendant stepped in front of her with a camera and took her picture. She brought some candy from the man with the ready-basket, and ate it like any child present. She was looking very well. She wore a dark green tailor-made gown, a long tan coat, a hat of brilliant green and red, and she carried what appeared to be a jewel-case. As she was leaving the circus a baby smiled at her from its mother's arms. Madame Nomica petted the child a moment, and appeared delighted with its attentions to her. When she had passed, some one told the mother who had been paying court to her baby.

In recent necrology the name of JOHN DELANE stands out prominently, and yet he was neither statesman nor poet, neither painter nor sculptor. He was for a half century editor of the *London Times*, but he was not himself a writer. Indeed, his motto was never to do anything himself that others could be had to do for him. But his personality was of a sort that radiated power. After an average healthy life he found himself in Printing House Square and at the age of little over twenty-three he became editor of the *Times*. "By Jove! I am editor of the *Times*," he exclaimed to some one shortly thereafter. But very soon he was the *Times*. He dominated his paper by force of ability and personality rather than by constant presence. For he was wont to travel much, to dine out constantly, and to mingle with people. A smaller man would have sunk to his desk. Yet this giant, too, had his sorrows, as the rest of us. "The New Year," he writes in his later life—"The New Year found me, as the last had done, alone in Printing House Square." And again, some time after the death of his mother: "Nobody now cares about me or my success, or my motives, and that weariness of life I had long felt has been gaining on me ever since. . . . I have much to be thankful for, [but] I have become so indifferent to life . . . weary both of work and idleness, careless about society, and with failing interests."

Correspondence

PIT BRYAN UP THIS TIME

SEATTLE, GERMANY, May 14, 1902.

To the Editor of *Harper's Weekly*:

Sir,—The attention of the Democratic party just now is depressing. No matter what man they put up for President he cannot be expected to win. The most confident Democrat must know in his heart, I think, that Mr. Roosevelt's party, for the moment, is the popular party. The Republican candidates may be rather vague persons, comparatively, but it is as certain as can be that one of them is going to be the next President. Instead of wasting hopes, therefore, on the present contest, Democrats should begin at once to look on to four years from now. It is with an eye to that time, and not to this time, that the party should be deciding its policy and its choice of men. In 1912 a Democratic victory ought to be quite probable, with any ordinary good nominee, in the regular swing of politics.

But what if the Democrats should elect Mr. Bryan? Everything should be directed to prevent that. And it seems to me, sir, that a tip-top way to prevent it is to put him up now. Fill up the number of his defeats.

Suppose that Mr. Bryan is rejected now in favor of some more excellent man. One effect will be to put that excellent man out of politics for the future. Without saying at all who he may be, it is plain in the present show of candidates that he won't be the sort of man who can go on as a party leader after defeat. He will be useless in 1912, as Mr. Parker is now.

But that is a small thing. The real reason is that Mr. Bryan at the same date will be very much to the fore. He will be magnified in the party by the bad fortune of his rivals, and become more authoritative and formidable than ever. He is sure always to have a following. No matter on what new fields of error his banner may at that time be waving, it will still be waving. And he will begin to have the additional character of a prophet whose warnings come true.

You have followed your own wisdom, he will say to the party, you have sought out leaders that were no leaders, and you see

what has come of it. These two times you have thought to strengthen yourselves by rejecting me, and you continue to be beaten. Do you wish to be beaten yet again? How long will you be led astray?—This argument of the situation will be irresistible to a great mass of electors in the party. They will be tired of hearing reason. They will turn again to the prophet and shout for him with double loudness.

Sir, if Mr. Bryan could by any chance win through to be President in 1912, or in any other year, it would be a calamity, a calamity for the whole country, and the party's victory would be a small consolation. But there would be no danger of that victory. The nomination of Mr. Bryan would be a Republican victory. My opinion is that, whether speaking as a friend of the country merely or as a good Democrat, the best thing for the country to do now is not to oppose Mr. Bryan tooth and nail, as you, sir, and others are doing, but to moderate your opposition, and, in fact, to accept him, and put him up for President this once more, to let him get beaten and put aside for good. This election has to be lost. Let it be no loss as to help the rest.

I am, sir,

R. B.

PLURAL MARRIAGES IN UTAH

SALT LAKE CITY, UTAH, June 1, 1902.

To the Editor of *Harper's Weekly*:

Sir,—In your issue of May 9, under a Utah date in March, appears a letter over the signature of "Traveler," in which I find the following passage:

"For that these plural marriages still continue despite the prohibition of them by law, there is no sort of doubt, not only in the State of Utah, but in other Western States where thrifty and otherwise law-abiding Mormons have congregated in more or less numbers."

But there is every sort of doubt. I am aware that charges like the above are frequently made by professional anti-Mormons; but I do not find the charge sustained by any sort of evidence that would convince one inclined to ask for proof before believing a wrong had been committed. It is not enough to say the charges are "with difficulty be proved." If they can be proved at all, and if there are plural marriages since the manifesto, with the approval of the church—or in any other way—it should be established by some sort of evidence. Really the argument that a serious charge is true because it cannot be proved doesn't look like a safe proposition. Things which happen can be proved.

The Mormon leaders declare they are acting in good faith; that they and their people are not engaging in nor permitting new polygamy. I can find no evidence that they are untruthful in these statements. "Traveler" can do so, he should refrain from charges so serious.

I am, sir,

LEIFER ARMSTRONG.

A SUBSTITUTE EVIL

NEW YORK, June 1, 1902.

To the Editor of *Harper's Weekly*:

Sir,—Specialists in nervous and mental diseases in the South have called attention to the increasing frequency with which the negroes are using cocaine, and the appalling effect of the drug on this race. In Louisiana and Mississippi the practice is very common, the drug being sold to them by unscrupulous peddlers who take their notions merchandise from home to home.

Now that a wave of temperance is sweeping over the land—especially over several States in the South—there is reason to wonder whether the loss of nicotine stimulants will not increase the demand for noxious drugs such as opium and cocaine.

Those who are engineering the temperance movement in the South would do well to be on guard to see that no one evil is driven to the wall another does not take its place.

I am, sir,

"NEUROLOGIST."

IS THERE PROFIT IN DISSEMINATING INXUENOSES?

NEW YORK, May 20, 1902.

To the Editor of *Harper's Weekly*:

Sir,—Just a word in the cause of an improved code of morals for the use of the novel-writer in the telling of the story he or she may offer the reader of fiction.

The publisher, too, is a party to the crime of corrupting the youth of the generation.

We are told that the story-writer caters to the prevailing taste, and that the publisher readily discovers the prospect of profit accruing to himself from disseminating the innumerable and plain speeches of the author. If this be true the cause of public morals is sacrificed to a spirit of commercialism.

The average literary review ordinarily awards unstinted praise to the story of morally uncertain or immorally pronounced tenor. The strictures—usually in the form of a few lines—coming from the pen of the reviewer are not so much as to be regarded as a criticism as to be regarded as a commendation.

This true we might construe a new code of morals upon the ruins of the old—yet that course might be hazardous. Why not improve the heart of the reader by the dissemination of a reality; improve it so completely as to make it monstrously secure? Why not inaugurate the campaign of reform by weeding out the books that are not fit to read, substituting therefor a literature leading the reader to higher aspirations, elevating him above the lower tastes that were once so rapidly eating the upper hand?

I would not do the lessening of the income of author or publisher. Strict application of the remedy suggested would in the end result advantageously to both.

I am, sir,

JOSEPH D. HARRIS.

Finance

Some Phases of the Present Situation

By HOWARD SCHENCK MOTT

THE entire banking and credit situation has returned to a condition frequently described as "normal," although, as a matter of fact, it is really abnormal in the sense that it is not an average situation. The pendulum has swung completely and is on the other side from that of last fall. Surplus funds pile up in the banks in a most remarkable way, and available capital has become a drag on the market. The merchant in good credit can obtain accommodation on easier terms than for some years past, and the banks are hard put to it to find any profitable use for their funds. New York exchange at Chicago has ruled around fifty cents per thousand dollars for several weeks, indicating an absence of demand for funds in the West, and a desire on the part of interior institutions to secure either the low rates of interest they prevail on time and on call at New York.

This tendency of capital to move to the field of its most profitable employment is a wholly natural one. It emphasizes, however, a feature of our banking system that has often been severely criticized, namely, the privilege that interior institutions enjoy of keeping part of their reserves on deposit in the banks of the reserve cities, and the privilege that the banks of the reserve cities enjoy of keeping part of their reserves on deposit in the banks of the central reserve cities. During the panic last fall interior institutions suffered considerable hardship because they were unable to recall that portion of their reserves which was on deposit at New York and other central reserve cities. Now they are sending most of their idle funds to the banks of the reserve and central reserve cities so as to secure even a low interest return on them. Consequently the cash holdings of the New York banks grow sparse. In spite of heavy gold exports and government withdrawals in the past few months, the Clearing House banks of New York, on June 6, showed reserves of 29.29 per cent. of their deposits, and the State banks and trust companies 35 per cent. Of course this is an extraordinary condition as was the other extreme last fall. Rising prices in the stock market have been based very largely upon "easy money," which, so far as it is an economic factor making for improvement in the business situation, is entirely legitimate. A wild speculation in stocks merely because money could be readily borrowed would not, however, be justifiable or meet the support of conservative opinion.

Ahead, the Bank of England, the Bank of France, and the Imperial Reichsbank of Germany, and several other government banks have reduced their discount rates, and their reserves stand at high figures. The depression in business is world-wide, and the demand for capital at a minimum. In May the production of gold from the South African mines reached the largest figures on record. Last year something over \$400,000,000 of gold was added to the world's supply of the metal. There is every indication at present that the output of the mines this year will at least be no smaller, and it may be larger. When it is considered that banking reserves the world over are already high, the addition of \$400,000,000 of gold to the amount of reserves in existence is greatly enlarged the foundation of the structure of credits. None, for example, that \$250,000,000 of the gold produced during the current year should ultimately go into bank reserves; it would make a foundation, on a basis of, say, 25 per cent. of deposits, for increased deposits or loans of some of our billion dollars. The possibilities of such a situation in the way of borrowing power for governments, corporations, and individuals are evidently very favorable. Manifest the present declining tendency of commodity prices may soon be checked, because increasing production of gold means declining purchasing power of each gold dollar. The only way to measure declining purchasing power of the gold dollar is in rising prices of the things purchased. In these conditions will be found one of the greatest problems of the future; for, if the production of gold continues to increase as it has during the past few years, the cost of living as measured in gold dollars seems bound to rise.

In spite of the defects of the new currency law, it appears that the New York banks have determined to put themselves in a position to make use of the privilege of issuing currency under it should necessity require. Since have been taken to organize a National Currency Association at New York to be ready for an emergency. It is very doubtful if the ordinary demands of the autumn will call for the issuance of the new currency; it is too heavily taxed to make it easy profitable in the banks, unless money rates should go to high figures and pressure be brought at such figures for some time. The tax is at the rate of five per cent. per annum for the first month, rising at the rate of one per cent. per annum for each month that it stays out until ten per cent. shall be reached. When

in the tax shall be added the inconvenience and trouble incident in taking out the new circulation, it is apparent that no ordinary period of moderately "tight" money will be the occasion for issuing the new bank notes. As a matter of fact the chief use for the new emergency currency will probably be found only under panic conditions such as those of last October and November. At the present time the prospect is for easier money rates next fall than have prevailed in a number of years. The fact, however, that the New York banks have put themselves in a position to weather a storm, should it threaten, may possibly contribute to the maintenance of confidence at a time of stress.

As in all periods of depression, this country's imports have fallen off very heavily, and the revenues derived by the government from tariff duties have decreased correspondingly. Fortunately for the government in some respects, it entered the period of depression with an overfunding of receipts. The last Congress was an exceedingly wasteful one in making appropriations, and government expenditures for some months past have greatly exceeded receipts. If course such a situation can continue without disastrous financial results, and the government's surplus revenues of previous years shall last. Should the country be favored with good crops this year, and prosperity return, our imports and the government revenues derived from them will undoubtedly increase. Otherwise, within the next year, the government will have to face the rather serious problem of insufficient revenues to meet its expenditures. Under the circumstances the question of tariff revision at the next session of Congress has the practical aspect of providing adequate government revenues which it did not have in so large a measure last year. In any event, the incoming administration, whether Mr. Harding or Woodrow Wilson, will have to grapple with the problem of reducing tariff duties to keep campaign promises, and at the same time of providing sufficient taxation in some form to meet the government's expenses. Meantime the government's monthly statements of receipts and expenditures will continue to show a deficit.

During most of May rather cold and very rainy weather delayed the growth of wheat and the planting of corn and cotton; but it now appears, according to the government report issued on June 8, as if the winter wheat harvest would aggregate about 469,000,000 bushels. The estimated yield of spring wheat is 247,000,000 bushels. Apparently the United States will enjoy a very good wheat crop this year with a prospect of selling it at fairly remunerative prices. It is too early to hazard even a guess as to the probable yields of corn and cotton. As to both a great deal will depend upon weather conditions as well as the next few weeks. The condition of cotton on May 25, according to the government report issued on June 2, was 79.7 per cent., compared with 70.5 per cent. last year, and a ten-year average of 82.3 per cent., while the average is about the same as that of last year. Altogether, the crop promise of the season so far, while not meeting the most extravagant expectations, continues excellent.

Toward the end of May a buying movement of some proportions was reported in pig-iron. This was followed within a few days by a similar movement in steel. The latter raised considerable discussion because of the policy of maintaining prices which had been followed ever since the financial disturbances of last fall. Apparently iron and steel prices were not reduced until it became evident that the industrial situation held such promise of improvement as to warrant the expectation that reductions in prices would stimulate consumption. The only other possible explanation appears to be that the policy of maintaining prices was found to be utterly impracticable and broke down at its own weight because it was in opposition to the natural laws of trade.

The long-expected announcement of the Union Pacific bond issue was made early in the month. It was received very differently from that of the Pan-American loan. In the Pan-American issue, the character of the bond issue itself, and of the bankers floating it, came as an agreeable surprise to the financial community. In the case of the Union Pacific issue, however, the apparent refusal of the Rothschilds to lend their support to the undertaking, and an increase in the amount of the issue from \$40,000,000 to \$50,000,000, revamped criticism and suspicion of Union Pacific methods that started with the ten-percent dividend episode in August, 1900, and that recently has only been dormant. Quite naturally the questions arise: Why should Union Pacific have a floating debt of \$50,000,000 or more? And to what specific purposes are the proceeds of the sale of the new bonds to be put? Perhaps the time will come when an enlightened public opinion will demand that the purposes to which the proceeds of new bond issues shall be applied be stated in detail at the time of issue. When that shall be done, the investor will have an assurance that stock speculators will not be engaged in without his knowledge or implied consent.

NEW YORK'S NEW MUNICIPAL BUILDING

NEW YORK'S NEW THIRTY-FOUR-STORY MUNICIPAL OFFICE BUILDING, NOW TO BE ERECTED ON THE SITE OF THE OLD "STATS BUILDING" SITTING AT PARK ROW AND CHURCH STREET, WILL SERVE AS A HOME FOR THE VARIOUS DEPARTMENTS AND BUREAUS OF THE LOCAL GOVERNMENT, AND SCATTERED ABOUT THE CITY. THE ANTERIOR HEIGHT OF THE STRUCTURE WILL BE 350 FEET.

This Land of Opportunity

THE STORY OF A MAN WHO STAYED "ON HIS JOB"

By JOHN KIMBERLY MUMFORD

A LITTLE while ago a boy of some sixteen years, son of a reputable physician in Brooklyn, burdened by some delusion or distorted notion about his own affairs, or about a girl—anyway, with a twisted perspective, and lacking a level head—leaped from the Brooklyn Bridge span and put an end to himself. He had been given all the advantages of schooling, had a comfortable home, and every chance in the world to make a successful man of himself.

Among the papers which were taken from his pockets after his lifeless body was carried to shore was a letter, addressed by the manager of the Western Union Telegraph Company in Brooklyn, H. J. Hayden, to W. H. Numbler, manager of the Sixth Street office, recommending the boy to Mr. Numbler, and asking that he be allowed to practice telegraphy on the office instruments, and assisted in every way possible.

It was a chance thrown away. No matter how rich this country may be in opportunity; no matter how free the field; no matter how great the need for men—and particularly for the man; no matter how big the reward that waits upon work and ability—the decisive factor in every case shines in the man himself, to his grit and resolution, in his readiness to seize the chance, hang to it, and turn it to profit.

Now see how contrasts obscure themselves.

A day or two after reading the newspaper accounts of this boy's mishap, I sat in the executive office of the New York Central Railroad, uptown in the Grand Central, talking with a quiet, straightforward, firm mouthed, and smooth-shaven man, whose gray hair seemed somehow out of place with his still youthful face and keen, penetrating blue-gray eyes.

He was W. C. Brown, senior vice-president of the New York Central, the Lake Shore, and other roads comprising the Vanderbilt lines. Now, vice-president of the Vanderbilt system is a good deal of a job. In the average citizen it is suggestive of money, dignity, and influence, private cars, and a comfortable time generally; but to the man who holds it it means work, big work.

Wherever the grinning of the railroad construction gang's steam shovel breaks the silence of the wilderness, wherever car wheels turn, wherever boards of railroad directors meet to adjust the affairs of great railroad systems throughout the United States, there W. C. Brown is known as a man who made himself, who took the hard end of the game, and won out.

When T. J. Potter, now dead, was vice-president of the Union

W. C. Brown

SENIOR VICE-PRESIDENT OF THE
NEW YORK CENTRAL RAILROAD

Pacific, he told this story, which in a way condenses W. C. Brown's railroad history, and reveals the underlying reason of his success.

Before going over to the Union Pacific Mr. Potter was for many years head of the Burlington system, in which Mr. Brown was working his way to the top.

"I'll bet," said Mr. Potter, one day in Chicago, "Brown doesn't know what first attracted my attention to him, and gave him his real start to preferment in the Burlington company. It was a very little thing in a way. Along in the winter of 1877-78 we had a succession of fierce snowstorms, blockades, and all sorts of trouble. One Sunday night there was a particularly heavy storm, and as the wind whistled about the house

and the snow beat against the windows it awakened me, and I slept very little from that time until it was time to get up in the morning, thinking of the probable condition of things on the road. I went to the office unusually early, and just as I reached the office door I saw Jerry Hosford, then our superintendent of stock yards, wading through the snow, coming up from the direction of the river. He had evidently come across the ice from the stock yards at East Burlington.

"I noticed a young fellow trudging along in the snow beside Hosford, who bade him 'good morning' just before he reached the office door, and started up the street.

"After inquiring of Hosford as regard to conditions during the night, and being informed that three or four hundred car loads of stock were comfortably housed in the pens and sheds at East Burlington, I said to him, 'Who was that young fellow who came over with you?'

"His name is Brown," said Hosford. "He's one of the train despatchers. His trick is from four o'clock in the afternoon until midnight; but when he was relieved last night the storm was at its worst, and it seemed doubtful if we were going to be able to get the stock through and unloaded at the yards; so instead of going home and going to bed when his regular work ended, he volunteered to help me about my work, and I don't know how I'd have got along without him."

"I made a note of Brown, right then and there," said Mr. Potter, "for that. I thought, was the head of man it was to the company's interest to push along. But he didn't wait, pushing. All Brown ever wanted was a chance. He furnished the motive power himself."

When W. C. Brown worked with Jerry Hosford to save the Cattle for the Burlington

It was with this anecdote in memory that I visited the Central office, and was ushered in for an hour's conversation with the man of whom it was told.

We talked about railroads, and men of business conditions, and the early history of the country, and farming and taxes, and other things.

"Mr. Brown," I said, "would you mind telling me where and when you began railroading, and in what capacity?"

At first he didn't want to talk about himself. It is a noteworthy and interesting truth that, first and last, these men who have fought circumstances and triumphed over them, who have come through by the hardest to positions of big trust and responsibility, are men of very few words, and modest regarding themselves and their achievements, almost to the point of bashfulness.

"I want," said I, "to find out whether the workingman of to-day, under the régime of great corporations, has as good a chance of success as the men of old, the two preceding generations had; whether it is true that the trust and the big railroad corporations 'rob the poor boy of his opportunity.'"

"Rob him of it?" he exclaimed. "The opportunity to-day, for every boy and every man in the ranks, is twenty times—yes, more than twenty times—that it was, and any man who worked his way and is anywhere near the top now will tell you the same thing, because he knows—knows what he had to do and what he did for boys at the present time. To prove this is the simplest kind of a task. It is easy enough to see that the enormous expansion of railroads and of manufactures, the development of new inventions—in short, the almost immeasurable growth of the work to be done—make a demand for more men and for the best men. Absolutely the only limit to what a man may accomplish to-day along these lines is his limit fixed by his ability and his willingness."

"But where did you start yourself?" It was the live proof that I was after.

"Why," he replied, "I started working on the section out West, and working engines—just an every-day section hand, and glad of the job. I was sixteen years old then."

"And what was the next step?"

"The next step was learning telegraphy. I had a chance now and then to help the station agent in my spare time, and we got pretty friendly, and finally he let me come into the office nights after working on the section and practice, after I had learned the code and something about the key."

Here, then, was a different kind of boy—a boy who was earning his living already, and was bound to fit himself to earn a better one. A bare chance at a telegraph instrument was his prospect for fortune.

"Mr. Brown," I said, "I heard a story about you once, which fits in pretty well right here, and I'd like to know if you remember it."

He smiled broadly at the recital of Mr. Potter's story.

"Yes," he said, "that happened, all right. I shall never forget that night, and the time we had with that bunch of cattle."

"But Mr. Potter said that was where you started to be general manager of the Burlington."

"Well," he replied, "if Mr. Potter said so, it was so, because he was certainly in a position to know. But I certainly hadn't any designs on the general management of the system that night, when I went up and offered to give Hoots a hand with the steers. I knew the boys had to be in, and it was more than he could handle alone. I just volunteered, and did all I could in the emergency, as part of the day's work. It didn't occur to me then as anything particularly worth mentioning or deserving of special recognition, but since then, in positions where I have had large

responsibilities and large bodies of men to handle, I have come to realize, much more than I did then, that it is that kind of spirit and that kind of service that make men of value to their employers."

Reverting to his effort to learn telegraphy he continued:

"I stuck at it until I became fairly competent, and at last got a job as a regular operator on the Chicago, Milwaukee, and St. Paul. That was thirty-seven years ago—thirty-seven years ago."

As he said it, thirty-seven years ago seemed a pretty long time. Just how long, and how packed with work and with application to the duty nearest to hand it would be difficult to measure, unless one could hear from such

a man's own lips the intimate story of his trials and disappointments and successes, and these are the things that such men remember for the years they have left, but never talk about.

But for lack of the personal narrative, and for the sake of demonstration, I have recourse again to the *Biographical Directory of Railway Officials*, and I read this record of consecutive service after 1870, the year when W. C. Brown rose from section hand to the rank and position of superintendent on the Chicago, Milwaukee, and St. Paul.

"March 1870 to June 1872, telegraph operator on the Chicago, Milwaukee, and St. Paul; June 1872 to March 1873, train dispatcher Illinois Central; March 1873 to June 1876, train dispatcher Chicago, Rock Island, and Pacific; June 1876 to Jan. 1880, train dispatcher Chicago, Burlington & Quincy; Jan. 1880 to Jan. 1881, chief train dispatcher, same road; Jan. 1881 to July 1884, train master; July 1884 to Jan. 1887, assistant superintendent; Jan. 1887 to Aug. 1888, superintendent, same road; Aug. 1888 to Jan. 1896, general manager of the Hannibal & St. Joseph and Kansas City, St. Joseph & Council Bluffs, and Quincy (now North Western); May 1891 to Jan. 1894, also general manager, Chicago, Burlington & Kansas City; July 1891 to Feb. 1892, Vice-president and General Manager of Lake Shore & Michigan Southern Ry.; Feb. 1892 to date, also Vice-president of the Michigan Central and Cleveland, Cincinnati, Chicago & St. Louis Ry.; Jan. 1894 to July 1901, general manager Chicago, Burlington & Quincy; July 1901 to Feb. 1902, Vice-president and General Manager of Lake Shore & Michigan Southern Ry.; Feb. 1902 to date, also Vice-president of the Michigan Central and Cleveland, Cincinnati, Chicago & St. Louis Ry.; Jan. 1902 to July 1904, Illinois & Iowa Ry."

If you have read this record through carefully, as you should, you will have noticed that there is no hiatus, no empty space of idle years, or of years spent in alien occupations; that the man has been "on his job" continuously from sixteen years of age till now, and next July he will be fifty-five. You will have noticed, moreover—and it is

true of all these men—that at a certain point his jobs began to overlap, and he had to be in two places at once in charge. That was the time when the consolidation of railroads commenced, and small roads began to be merged into the greater "systems," the process which the agitators would have us believe abolishes opportunity and does away with the demand for men. That is the mistake some people make. It is that very process, so often repeated in the United States during the past ten years, that has made the big opportunity, the chance for which the right man has been in preparation through long years of incessant application. It is in that crisis that the best men win.

In view of all this, in view of the "up and up" mania which possesses the young men of to-day, Mr. Brown's reply to the next inquiry was instructive.

I asked him what he considered the most important factor in his advancement.

THIRTY-SEVEN YEARS AGO

Frederick D. Underwood, now president of the Erie Railroad, was a freight brakeman on the Chicago, Milwaukee, and St. Paul.

W. H. Truesdale, now president of the Delaware, Lackawanna, and Western, was a freight-house clerk on the Rockford, Rock Island, and St. Louis.

W. H. Newman, now president of the New York Central System, was a freight clerk on the Texas Pacific.

Albert J. Earling, now president of the Chicago, Milwaukee, and St. Paul, was a hard-working telegraph operator on the old Milwaukee and St. Paul, up in Wisconsin.

W. C. Brown, now senior vice-president of the New York Central System, was a section hand and loaded wood on the Chicago, Milwaukee, and St. Paul.

George B. Harris, now president of the Chicago, Burlington, and Quincy, was a paymaster's clerk on the Hannibal and St. Joseph.

Marvin Huggitt, now president of the Chicago and Northwestern, was a train dispatcher on the Illinois Central.

J. T. Harahan, now president of the Illinois Central, was foreman of a construction gang on the Louisville and Nashville.

W. A. Garrett, now president of the Seaboard Air Line, was a messenger boy in the old Union Station at St. Louis.

Theodore P. Sherris, who, in addition to being president of the Alton and Clover Leaf Lines, was chairman of the Panama Canal Commission, and is now president of the Interborough, was waterboy of a construction train on the Little Albion and Centerville Railroad out in Iowa.

Oscar G. Murray, now president of the Baltimore and Ohio, was a ticket agent on the Galveston, Houston, and Henderson Railroad in Texas.

T. M. Emerson, now president of the Atlantic Coast Line, was a freight clerk on the Fort Wayne, Muncie, and Cincinnati.

George W. Stevens, now president of the Chesapeake and Ohio, was an office messenger for the B. and O.

Luther Tuttle, now president of the Boston and Maine, was a ticket clerk on the Hartford, Providence, and Fitchburg Road.

Samuel H. Felton, now president of the Mexican Central, was a rodman on the Chester Creek Railroad, in Pennsylvania.

J. A. Edson, now president of the Kansas City and Southern, was a telegraph operator on the Lake Shore.

Hifton H. Smith, now president of the Louisville and Nashville, was an operator on the Blountsburg.

L. E. Johnson, now president of the Norfolk and Western, was a fireman on the C. B. and Q.

Frederick A. Delano, now president of the Wabash, was a journeyman machinist on the C. B. and Q.

The sum total of the annual salaries of these seventeen men, at no mention their incomes from invested savings, is more than three quarters of a million of dollars.

RAILROAD PRESIDENTS OF TO-DAY WHO STARTED AS WORKING BOYS

The Man who doesn't get to be an Official of the Company

"Just sticking at it," he said, "and making a business of my business, filling every job I got as well as I knew how. I think that under present conditions, and perhaps under any conditions, it is more or less of a mistake to preach to young men that they should fix for themselves a specific goal, and strive toward it, keep it eternally in sight, and never let anything distract their attention from it. If a fellow sets out with that idea he is apt to become an office politician, and he wastes more time figuring how he is going to get the step over somebody else than he expends in attending to the business in hand.

"The thing is to bend every energy in him to doing to-day, as well as it can be done, what he has to do. The man who does that needn't worry about promotion. He doesn't have to look or scheme for promotion. Promotion will look for him. There is too much to be done for any man to be overlooked who is able to turn to and do it, and who is willing to do it. Willingness is a big item. It is positively essential that a man be on good terms with his job, even if it isn't all he'd like it to be, and that he should make every day's work the very best day's work he can do. The workman who is forever thinking how much better yardmaster he would make than the man who has the job over him is hurting his chance of ever being a yardmaster, if he only knew it, because he is diminishing his efficiency, and it's efficiency that counts.

"A man does better simply to apply himself to every day's duty as it comes along, is that way he misses nothing, he masters his position, and fits himself for a bigger one quicker than he could by any other means; and as for advancement, it will come looking for him, because, as I said before, there is a vast demand for competent men in the high positions.

"Just look over the field; the fact is that there is more money than ever, and the opportunities are greater than ever. Why, as railroading is done nowadays, there are more superintendents than there were conductors when I started, and more general managers now

Figuring how he can Step Ahead of Somebody Else

than there were superintendents then. Now if you take a corresponding increase in all the other grades you will get some idea of the magnitude of the business and the chance it offers. Do you realize that out of the 80,000,000 population that the United States are credited with, more than one-fourth part to-day is composed of men employed by railroads? And that the wages are double, to each man, what were paid thirty years ago for the same hours of work? That means something.

"Another factor that makes for rapid promotion for young men nowadays is that the conditions wear men out quicker. The tension is greater, necessarily, as the mechanism grows bigger and more complicated. Men used to stay in a job until they were simply played out, and in some cases actually died of old age while still in the service. They can't do that now. Men have to make way for younger men at a very much earlier age."

"But," I asked, "is it the workingman in this country who gets to the top in these big industrial concerns and big railroad systems? Or is it the other man?"

"You don't have to go far to get that question answered," he replied. "Any man who knows railroads and the operators of railroads will tell you that ninety-nine per cent. of the men who are in charge in the highest branches of railroad operation to-day are men who have come up from the ranks, and not by any short cuts either, but straight along the hard road, from one position to the next above it, and often-times have stuck in a single job until they thought they had reached the limit of their possibilities.

"Schools are being started in order to fit boys to be better workmen, to put them in the way of quicker becoming foremen and superintendents. And this is for the boy in the shops, for the son of the workingman. What must the need be, do you think, when a corporation pays boys regular wages for going to school, and accepting a technical training provided at the company's expense?"

"Need more be said?"

A Chance at a Telegraph instrument was his First Passport to Fortune

Helen Farnsworth Mears

making them in her mother's oven. When she was seven years old she made a bust of Apollo which took the prize at the County Fair and won her in the county's weekly paper her first newspaper notice. When she was fourteen, and still having had no lessons except such drawing as was taught in the public schools, she won the prize at the Chicago Exposition for the best symbolic figure of the State of Wisconsin. When the time came to work on her statue on the grounds, she went to Chicago with her sister, just two years older than herself, and there set to work on her figure. In making the outer covering to the figure, Miss Mears, in her naivete and ignorance, made it much too thick. She then went home for the Christmas holidays, and when she returned her own statue was the only one of those set up that had withstood the exceptionally severe winter.

With the money which she got for her "Genius of Wisconsin," Miss Mears went to Paris and studied at the Julien Studios for several years. While there Mr. St. Gaudens, noting her exceptional abilities, began teaching her privately, and she afterwards travelled quite extensively with the St. Gaudens family. Of her later work Mr. St. Gaudens once said: "It has a man's strength, but the spiritual grace which only a woman's hand could lend it." On returning to America, Miss Mears declined repeated offers from Mr. St. Gaudens to work in his studio with and for him, feeling that it was best to strike out for herself, to find her own bent and follow it. Since then her chief works have been the life-size statue of Frances E. Willard, which now stands in the Capitol in Washington, and "The Fountain of Life," which was awarded the medal at the St. Louis Exposition. "The Fountain of Life" is at once the most ambitious and most significant of Miss Mears's work. The

A Notable Woman Sculptor

By LOUISE COLLIER WILLCOX

upright plane of the piece is divided by plain, Doric pilasters into three panels. The first panel contains the standing figure of a woman bearing a cup and leaning against the vigorous roots of a great grape-vine; in her face is the sleep of unconsciousness, the profound slumber which precedes the awakening of consciousness. Beneath the panel are the words: "Lo, Alpha drama, bearing her cup, And the vine stretch strong through long time." The central panel, from which the water flows, represents a rugged mountain-side. The vine has passed through from the first panel, and here bears luxuriant fruit and foliage. A slight, covering girl's form, faintly reminding one, by its slim childish structure, of Walt a figure of life in "Love and Life," bends forward, setting her lips to the rim of a cup which she is taking from a kneeling youth. The two forms of juvenescence are wonderfully symbolized. The youth, absent whose head and shoulders the vine drapes heavy clusters of grapes, expresses in every line of his vigorous young body the courage and the endurance of young, annual existence. The very course of the blood through the veins, the rippling of muscles, the awakened spirit of light and struggle, all show in the marble. He holds up the cup with the look of mastery and confidence, while the

Copyright, 1901, by Helen F. Mears

Miss Mears's Medalion of Edward MacDowell

"The Fountain of Life," Medal Winner at the St. Louis Exposition

little, wavering girl's figure, fearful of the impending awakening of fuller consciousness, trembles and hesitates for one last look of tenderness ere she surrenders and drinks of the cup of life. It bears the motto: "Till out of slumber and the strength of sleep Life quickens and the hopeful cup of consciousness drains deep." The third panel gives the final stage in the human drama, the poise of detachment. The vine has reached its end. One cluster of grapes and two leaves reach over into the third panel, where a umbos of rays from above strikes about the head of the youth, winged now, and holding up to his Maker again the cup of consciousness. "And Lo! Hesper, angel of the after life, Lo! the cup, as offering to the Maker."

There is profound significance in the young sculptor's conception of the prenatal sleep as feminine; the passive, creative power, but of detachment, the final surrender after conflict, as masculine.

Two other works of Miss Mears that should be mentioned are the MacDowell medallion, and the beautiful medallion bearing the title "Elizabeth Mears, A Mother."

Upon the MacDowell medallion are the words which the composer has inscribed at the beginning of his "Norw" Sonata:

"Night had fallen on a day of deeds;"

and a bar of music from the Sonata Tragic, which in one of these fleeting moments when consciousness of his surroundings veiled the dying composer, he himself designated as the time he wished put on the medallion. In the hands of the sitting figure, which are wonderfully modelled, the artist has conveyed the delivery of the composer's sense of touch, the infinite sensitiveness of the finger tips, pathetic, tragic, beautiful, and yet quite simple, the figure sits there in this fashioned chair, his one-time power over an artistic medium still leading strength and dignity to the stricken figure.

A State's Antidote for Crime

THE WORKINGS OF THE PROBATION SYSTEM IN MASSACHUSETTS

By REV. FRANK B. SLEEPER

Time has gone by when so much punishment, administered for so much crime, can be called justice. The moral ledger of life will not balance in this debit and credit way. And genuine reformation is of infinitely greater worth than punishment. It is the general realization of this that has brought about the probation system for offenders.

The true humanitarian doctrine makes two positive demands. Firstly, the largest lasting good and protection for society. Secondly, helping the offender against the law, if he so desires, to attain to an honest life. "He is a man for a 'that,' and a 'that.'" He is grandly worth the saving.

Judge Daniel W. Bond, of the Massachusetts Superior Court, is generally regarded as the father of the probation system in his State. During the years 1877 to 1880, when he was acting as district attorney for the Franklin and Hampshire districts, he began practical probation work. If there appeared to be reasonable hope that the accused would reform without punishment, he was allowed his liberty under the surety of a reliable friend, with the understanding that if his future conduct continued good his case should not be brought up in court again. In a majority of instances Judge Bond met with success.

For fully thirty years Judge Bond has given close study to this system, and it has come into general use in Massachusetts.

This probation officer keeps all those in his charge under constant watch and care as no court judge or sheriff or ordinary officer can do. This is his special work. He follows them into their homes, the shops in which they work; he knows their actions and associates. He almost reads their thoughts. They cannot escape his faithful, kind, loving vigilance. He urges: "Do what is right. Be honest, upright men."

The probation officer is required to keep on his books a full record of each case. But no one can, a judge of the Superior Court may ever read this record. No paying public can ever know. No detectives can ever dig up this information. It can never be used as evidence in court or published on the witness stand. It is buried in the oblivion of utter forgetfulness. This is worth everything to the man seeking to do right, that his dark past can never rise up against him.

There is also large kindness. A man in sore need is not turned out starving, helpless, hopeless, and in rags. If the probationer is hungry he is fed. If his clothing is very old or ragged he may have a new suit. If he wants work it is secured for him, if possible. If the unfortunate man needs a ticket to take him to his home that ticket is bought. The probation officer keeps a financial account with the court and is reimbursed for such expenses. It is wonderful what large hope there is under this system for the man who is determined to do well.

The financial saving to the State by the probation system is very great. Reformation is cheaper than imprisonment; even if we reckon in cents and dollars, it pays to support the system. Figures compiled by Mr. Ramsey show that the probation system, in one year, has saved the State the cost of supporting 194 offenders, amounting to \$13,365. And he adds: "The young men restored to the community are made law-abiding citizens."

Objections other than financial have been made. It has been charged that the system encourages wrongdoing; that it weakens the protection which society must have. But the very opposite of this has been proven. It puts a premium on righteousness and a curse and judgment on evil such as have never been known before. Moreover, it is never almost more than once by the offender. If he fails to show evidence of reformation he is promptly arrested, taken into custody, and surrendered for punishment. And justice is summary, for there is no possible appeal against the decision of the probation officer. This system is full of kindness for those who wish to build a true life on it. But it is iron justice for those who abuse it.

The probation officer adapts his methods to the character of his charges, striving always to play upon their better nature and bring out the good. Here is a curious example:

In Middlesex County a man named Potter had been arrested, and was allowed probation, in order that he might have a chance to reform. The probation officer said to him: "I see two men sitting in your chair. The first one is wickedly ruining his life, swearing, drinking, cursing. The other is shaping his future as the potter shapes the clay; his fingers have the touch of beauty and the divine as they are fashioning the precious vase. Which will you be?" The skillful use of the word "potter" was sufficient. The probationer saw the point. It was his choice between crime and integrity. He said: "I will be a true man." The probation system works along this line.

The Rev. Robert Walker, rector in East Cambridge, and probation officer, is a genuine enthusiast in this work, believing that to exalt a man guilty of crime to a life of integrity is the greatest moral accomplishment possible.

I was in his home office one evening as a boy was announced. I started to go. He said: "Do not go. Wait." The boy, a fine-looking fellow, strong of body and of clean face, had been guilty of larceny, and was under probation. His sentence, so the Rev. Mr. Walker recommended to the judge, was that he pay one dollar a week for a year until the debt was discharged. He had come to bring his dollar. I never witnessed more honest or kinder treatment than the boy received that night. Not one word of sentimental gush. Not a hint to lessen the evil of his crime. But Mr. Walker, putting his arm around him, said: "You are doing well. Keep on. I believe you will be an honest man."

What did good Christian judgment decide in the case of that boy? Confine him in prison? Yes, and by so doing put the devil's own seal upon him forever. You could not possibly bring worse ruin to a young life than this.

The Rev. Mr. Walker is most thorough in his work. A man had been arrested for drunkenness, and was his ward on probation. Word came that he had been drinking again, and he was sent for. The following conversation took place:

Probationer: "I shall never forget the hour I was put on probation. I have not drunk a drop since."

Mr. Walker: "Not one? You would not lie to me?"

Probationer: "Lie to you? No, never."

This question was repeated two or three times, with the same answer. Then Mr. Walker said, "Pull your collar up around your neck. The windows were thrown open. The cold winter blast came through the room as they sat for five minutes in perfect silence. After the windows had been closed Mr. Walker said, "Now the air is pure. It was foul with all the lies you had been telling me. When did you drink last?" The man, with soul and tears answered, "Last night." It was a strong, effective lesson and not soon forgotten.

James P. Ramsey, probation officer in Middlesex Superior Court, cooperates with Mr. Walker in much of this probation work. They have expended much labor in arranging the books of record for probation officers; in sending pamphlets out to the public containing a summary of the probation system and laws. Mr. Ramsey has visited Scotland, his native country, giving addresses there, arousing great enthusiasm, and some of his plans for probation work have been adopted by the governing council of the city of Glasgow.

A man in Fall River had left his wife and six small children, the oldest thirteen years of age, to live with another woman. His family became a charge on the city. The man and the woman were arrested on a statutory charge. The man seemed penitent and wished to return to his family, and his wife was ready to forgive him if he would return and provide for them. When the case was called in court, probation was ordered, and the man returned to his home. Six months later Mr. Ramsey visited his residence in Fall River and found that he had worked every day since his return, and given his wages, \$2 per week, regularly to his wife. She was

Rev. Robert Walker

James P. Ramsey

TWO OF MASSACHUSETTS' PROBATION OFFICERS WHO ARE DOING EFFECTIVE WORK IN THE CAUSE OF ENLIGHTENED JUSTICE

very grateful for what had been done. Here is a case in which the probation system did entirely reform. It reunited that family, rendered the wife glad and hopeful, supported those children without disgrace, and saved the man from the hard grinding out of his sentence behind prison walls. Now take this case: A man was in jail awaiting trial for breaking and entering. He said that he was tempted to steal because of his longing for tips; he was allowed probation and went away. After he had gone a young woman appeared with a three-week-old babe in her arms, and claimed to be his wife. It was discovered that she was a girl whom he had seduced and abandoned. He was soon located in a city one hundred miles distant, was brought back and landed in the jail at East Cambridge. He was sentenced to hard labor for one year.

Probation is no easy-going system. It means just what it says. It is kindness to those who are reformed by it. It is an iron system of inviolable justice to those who are reckless in their obstinate criminality.

Probation saves the lawbreaker whose crime was due to ignorance or folly. For example, six young men set fire to an old barn, thinking that it would make a fine illumination on the eve of our national holiday. They did not know that valuable agricultural machinery was stored in the barn. They were indicted for arson. Judge Bettsworth placed them on probation on condition that \$1000—the appraised value of the barn and its contents—be paid by them, as well as \$3 each for court expenses. Five paid their share in a short while. The sixth youth was given his own time because of ill health and of his being one of the main supports of his home, his father having died some years previously. Thus, not only the farmer who exposed the expense of his new machinery, but the State also profited, because the young men were not imprisoned. And, greatest of all, was the moral influence exercised by their obligation to repair their wrong.

Judge Bond, whose whole interest is wrapped up in the permanent success of his system, has put the question, How great, deep, and lasting is the moral good that the probation system accomplishes? The public at large has the right to put such a question. The answer varies, as it comes from different sources. The Reverend Mr. Walker is very careful and conscientious in the estimate that he gives. He says: "Out of one hundred that I take under probation twenty-five thoroughly reform and will stand independent, and twenty-five more are doing well, but need the probation officer as a friend. The other fifty are in the doubtful list. Yet, considering the class of men we are dealing with, even these figures indicate a great victory."

Mr. Ramsey makes the following estimate: "From June 1, 1904, to June 1, 1907, I had placed in my care 267 persons who had pleaded guilty to breaking and entering and larceny. Of this number 157 are marked good, 39 fair, and 71 were sentenced for punishment."

The work of the probation officer is far from easy. If there are roses, there are also stinging thorns. Except he have the profoundest love for men, abounding patience, and great perseverance, he had better not attempt this mission. His soul will be tried to the utmost. At times there will be successes, at times the saddest and the most provoking failures. Many cases that promised the worst turn out the best, and many cases that were very hopeful go to the bad.

The great importance of the probation system is in its moral work. Bankrupts have become sober. Defaulters have repented, and sought to pay back the money which they had wrongfully taken. Those guilty of a statutory crime have learned to live cleanly; those who had never produced normal infants, one was a normal woman whose progeny could never walk unless the walking strain were reintroduced by crossbreeding; and two were normal men that reproduced, in their descendants, one waiter to every three that were normal.

So when white Angora rabbits were mated with Belgian hares the offspring were all apparently Belgian hares, the dominant type. But these, when inbred, reproduced 23 Belgian hares to 17 Angora rabbits—again the 3 to 1 Mendel formula. And these Angoras, mated in Angoras, never again developed in their offspring any sign of the Belgian hare, while of the 23 Belgians, one third produced pure Belgian hares and two-thirds Belgians and Angoras.

This discovery was applied in a remarkable manner to the breeding of fowls. Breeders have always found a difficulty in raising pure blue Andalusians, for when two blue Andalusians are crossed one-half of the progeny always are blue and the rest black or black and white. In the light thrown out by Mendel's formula, it was suggested that the blue fowl might be the hybrid offspring of a black crossed with a black and white. This actually proved to be the case. On crossing a black fowl with a black and white all the progeny proved to be blue, and it was not until these all-blue descendants were inbred that the black and black and white reappeared in the Mendelian proportions. So today the up-to-date breeder of blue Andalusians does not mate two blue birds, but blue with black and white, and all the progeny are blue.

In short, breeding, which has been considered the industry that foretold the least certain results, is being reduced to an exact science. The breeder of plants or animals, who formerly discarded his hybrids as valueless, knows now that in the next generation all possible forms must appear, and that half will breed true to their own exterior form forever, while half will throw off different forms in the proportion of 3 to 1. Again, the "pure bred" horse, dog, or cattle no longer consists of the progeny of a long line of "pure bred" ancestors, but can be calculated with certainty by the Mendelian formula.

And man? That is the question that rushes in on us. Experiments so far made would seem, naturally, to include him. For instance, eye coloration has been divided into clear blue, or simplex and duplex, or brown, ringed, spotted, etc. The duplex eye is the dominant one, whereas children of two blue-eyed parents are also shown to be invariably blue-eyed, children of parents one or both of whom are duplex-eyed follow the Mendelian law.

The duration of human life obviously militates against observation through the required number of generations, while the small progeny of the human family prevents accurate calculation, but Varcoe has traced through four generations the children of a family that possessed a certain deformity of the fingers. In this case the deformity was the dominant character—and the normal condition—and it was shown that all also did not inherit it could not trace it, even when two normal members intermarried. On the other hand, when a deformed member married a normal the descendants possessed the dominant characteristic.

URING the past few months a new law has come to light, a discovery greater than any made along the same lines since Wallace, Darwin, and Weismann revolutionized biology. It has reduced to its exact center what was believed to be blind chance; and incidentally it will place on a sure basis the hitherto problematical business of stock-breeding.

When Gregor Johann Mendel, Abbot of Brinn, died in the year 1884, his friends mourned him as a good monk, who had dedicated to science and published a few amateurish papers, chiefly upon peas and hawkweeds. Nobody dreamed that twenty-four years later "Mendelianism" would be the key that would unlock the unopened doors behind which lay concealed the hidden mysteries of heredity. It was not until the year 1904 that Mendel's papers were perused by de Vries and other botanists; and it was seven years more before his startling discoveries had been applied to all organisms and found equally correct in every application.

Mendel's experiments began in the cross-breeding of numerous varieties of peas that grew in the monastery garden. Among other things, he crossed tall peas with dwarf peas, sowed the seeds that resulted, and found that all the progeny were tall. But Mendel did not stop here. He allowed this tall progeny to self-fertilize, and, to his surprise, found that the next generation consisted of both tall and dwarf peas, in the exact proportion of three tall to one dwarf. He then self-fertilized the dwarfs, and found that their descendants were all dwarfs through successive generations so long as no cross-breeding occurred; but when he self-fertilized the tall peas he found that the original tallness of these in one self-bred. Three of the progeny were tall to each that was dwarf; but two-thirds of the tall progeny were inbred, inasmuch as they again produced tall and dwarf peas in the same proportion.

In brief, Mendel discovered that in cross-breeding the physical characteristics of the dominating parent reappears through all generations in the general proportion of three to one. This may be better shown in the following way:

First generation: Tall, fertilized by dwarf.

Second generation: All tall.

Third generation: Tall (A's); tall (B's); tall (C's); dwarf (D's).

Fourth generation: A's descendants will be tall forever, unless cross-breeding occurs. B's descendants will be dwarf forever. C's and D's descendants will be mixed, in the proportion of three tall to one dwarf. This law of inheritance will continue itself exactly as the third, and the cycle will be maintained forever.

Mendel next experimented with round-seed peas and wrinkled-seed with similar results. Actually, out of 7324 seeds produced, 5474 were round and 1850 wrinkled—a ratio of 2.96 to 1. This astonishing approximation to the previous results demonstrated to the experimenter, if not to science, the invariability of his law. And when he crossed peas having inflated pods with peas having constricted pods, and peas having yellow seeds with peas having green seeds, the law was found to be invariable.

Mendel's years of patient experimentation closed with his death, but after the rediscovery of his results by de Vries investigations were made in the animal world. Japanese waltzing mice were crossed with normal mice, and, since the waltzing habit is not

Old-age Pensions in England

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London.

One pretends to regard Mr. Asquith's scheme of old-age pensions as other than a crucial turning-point in the social development of this country. Nor does any one believe that its social effects will be its only ones. It is bound to exert an incalculable, many think a disastrous, influence on the national finances. The Protectionists are confident that it can only lead to tariff reform, and a great many Free Traders share their belief. I doubt myself whether there is much real enthusiasm for the project. The very poor, of course, rightly and naturally welcome it. But the average man is appalled by the possibilities it opens out. He has no faith whatever that the limitations proposed by Mr. Asquith will be adhered to for more than a very few years. He foresees that every party will hasten to outbid its rivals by promising to lower the pensionable age or raise the amount of the bounty. He cannot hide from himself that what is nothing less than a game of grab at the public exchequer has begun, and can never be abandoned. He has read something of the history of American war pensions. He knows that they have cost the United States over \$2,500,000,000, that every "safeguard" which was framed to restrict their growth has been swept completely away, and that they have been used to delude public opinion and that they have lent themselves to an infinity of fraud and abuse. He sees no reason to doubt that what has happened in the United States will happen again in Great Britain. Indeed, he inclines to the opinion that all the evils of the American system will duplicate themselves with an even readier facility in England. For, after all, American pensions have always been based on the principle of reciprocal services of some sort, however far fetched. The war-pensioners of the United States, in theory at any rate, are supposed to have done something for the government that so heartily supports them. But in England no such principle or theory underlies the scheme which Mr. Asquith has initiated. Even the Americans have never gone to the monstrous length of suggesting that a nation of seventy, whose income falls far below a certain point, is now *responsible* to the state for a quarter of a week from the state. They have not yet thought of adopting the notion that the mere fact of living long enough in a country constitutes a claim upon its benevolence. Yet this is the notion that serves as the foundation of the Asquithian scheme, and the average Englishman, trying to estimate the liabilities to which it commits him, finds them frankly terrifying.

Old-age pensions have been discussed in England for about twenty years. Their general principle may be said to have been accepted by both parties. Mr. Chamberlain inscribed them on his programme at least fifteen years ago. When he launched his moral propaganda he accompanied it with a definite promise that old-age pensions would have the first call on the treasury that a reform of the tariff was to accumulate in the treasury. Select Parliamentary committees have sat upon the question more than once. Schemes innumerable have been produced by social reformers. Almost every country in Europe has already instituted some form or other of old-age pensions, and I do not think there is any considerable body of opinion in Great Britain which objects to them in toto. The controversy has turned not so much on the principle of state provision for the aged poor as on the form it should take. But on this point the conflict of views is sharp and fundamental. Should old-age pensions be on a contributory or non-contributory basis? Should the state, before endowing old age, insist upon the recipient of its bounty making throughout his life a compulsory provision on his own account, which the state grant would supplement? Or should the state, without attempting to make thrift obligatory, simply assume the intention of giving a grant in aid to any man or woman above a certain age whose income fell below a certain standard? Now it is clear that in such a country as England any compulsory scheme must encounter enormous difficulties. In Germany those difficulties do not exist, because the whole of German life is on a military basis, every man or woman has his or her official dossier and is watched and identified by the state from the cradle to the grave. In a country so organized it is possible to make the state form of insurance the universal form of insurance and to see that each individual gets work by week, or has paid for by his employer, the required compulsory contribution. Obligatory provision for old age has been practicable in Germany because it can easily be grafted on, and is indeed merely the extension of, a system of universal discipline, organization, and superintendence already in existence and covering every grade of society and every department of activity.

But in England as in America no such system obtains. The state and the individual are scarcely on loving terms, and the microscope footage which suits the genius of Germany would be utterly repugnant to the habits and habits of Englishmen and Americans. For this reason the idea of a compulsory and universal scheme of old-age pensions on the German model has

been negatived in England. Then, again, it has been suggested that the state must assist such thrift institutions and agencies as it chooses to aid. But this implies a responsibility, the matter of choice and selection which no government would willingly face. Moreover, the larger part of the laboring classes stand outside benevolent and provident societies and, under this scheme would not be entitled to receive anything from the state. In other words, the cases which most touch the conscience of the community would go unheeded and the government *amateurs* would be a select body of the moderately poor only. In view of all this the government have decided that a non-contributory scheme was the only scheme admissible in the conditions of English society. I do not say that in the circumstances of the case they have decided wrongly or that any other conclusion was politically possible. But no one can be blind to the magnitude of the principle they are now engaged on embodying in legislation, or to the social, financial and political perils to which it exposes the nation.

I found the other day in a Socialist book this clear-eyed and truthful statement: "It is hardly disputable that millions of electors in the greater British cities have reached a point of personal decadence—physical, mental, and moral—to which no Continental country furnishes a parallel on any conceivable scale." I not only subscribe to that statement, but question whether in all the world there is a single class so wasteful, ignorant, and demoralized as the English poor. Free charity, free hospitals, free schools, and free money for the children have utterly broken the back of the old English self-reliance, and are converting thousands upon thousands of citizens into mere hang-ers-on upon public and private benevolence. It seems to me a most hazardous experiment to grant to such people as these old-age pensions. The notion that it will encourage them to work more, in my judgment, an almost absolute blindness to the experience of the past and to the lives and character of nine-tenths of the annuitants. In its effects upon the morals of its recipients a non-contributory scheme of old-age pensions appears to me far more dangerous than the provision that the state should make it the view of practically all who are best acquainted with the British poor.

What Mr. Asquith proposes is that from the first day of January next every person who is seventy years of age, and who is not possessed of an income exceeding £10 a year, shall, subject to certain exceptions, be able to draw a state pension of £12 5 a week. The exceptions are aliens, hunters, persons convicted of crime within five years preceding, and persons in receipt of poor-law relief. The £10 a year of net income is coupled together, where both husband and wife are severally over, the pension for each will be £1 8s 6d instead of £2 5s. No inquiry will be made into the previous character of those who apply for pensions, but a pension may be lost, either altogether or for a time, by misconduct. All the money, which is estimated at \$20,000,000 a year, will be provided by the state, and no individual and no locality will have to contribute anything. The pensions will be paid weekly at the post-office, and no taint of pauperism will attach to them. Mr. Asquith rejoices that there are 200,000 people who would come within the scope of his scheme. Their claims will be investigated by a pension committee appointed by the county, borough, or urban district council, either from within or from without its own body; and in each committee a pension officer, selected by the government, will be attached.

Nothing can be more certain than that this scheme will not long maintain its present form. In a democracy, where those who grant the pensions depend upon the votes of those who receive them, mitigated, but only mitigated, by the votes of those who have to pay for them, it is impossible to set any limit upon growth. Already the Labor party is proclaiming that the age limit is fixed too high. Politicians, eager to capture the labor vote, will soon swell the cry; the electorate will joyously join in the raid upon the treasury; and in a very few years Great Britain will find herself paying out pensions at £12 5 a week to every man and woman over sixty or over sixty-five, to the tune of from \$100,000,000 to \$150,000,000 a year. The seed is planted in the soil and the oak is hidden in the acorn; and Mr. Asquith's statement is not the end, but the beginning. If the scheme has been so brilliantly successful, if he has wiped off over £200,000,000 of the national debt and effected a permanent annual saving in interest of more than \$6,000,000, thus bringing back the aggregate of the national liabilities to the point at which they stood in 1880, if it is in fact a very grave question whether his recent budget may not undo most of the results achieved by his two predecessors. Not only has Mr. Asquith committed the state to an annual expenditure of \$20,000,000 on pensions—a sum which is absolutely certain to be largely increased before long—but he has also committed the duty on income to the extent of \$17,000,000. How Mr. Lloyd George, in a year of declining trade and faced with the certainty of a heavy cost for shipbuilding, is to raise the money without raising the sinking-fund or imposing new taxes, is a question that puzzles economists. Their general opinion is to be that Mr. Lloyd George will have to use hard what Mr. Lloyd George will be obliged to take away with the other.

The Path to the College Church

Dickinson's 125th Anniversary

By CLYDE FURST

DICKINSON COLLEGE, at Carlisle, Pennsylvania, celebrated this week its one-hundred-and-twenty-fifth anniversary. It is the twelfth of our colleges in age, its charter having been granted in 1784, five days after the signing of the treaty that recognized American independence.

The name of the college was derived from its most conspicuous founder, John Dickinson, in the opinion of Thomas Jefferson "one of the most accomplished scholars that the country has produced." An eloquent patriot in State Assembly and Colonial Congress, his "Farmer Letters" of 1767 united the colonies in sympathy and in action; he drafted the letters to the King so highly praised by Lord Chatham; although a Quaker, he

Princeton had been negotiated by Dr. Bush. Dr. Nisbet while in Scotland had been a friend to the colonies, and he was known as "The Walking Library," a title justified by his collection of books now at Princeton. Many anecdotes still extant bear witness to his wit.

At a time when Columbia and Princeton had lost two professors, Dickinson began with three professors and two assistants, and instead of expending its money for buildings it inhabited an old schoolhouse. "If we have golden professors," said Dr. Bush, "the frugal site and humble appearance of our college will not prevent its growth or injure its reputation."

In 1798, however, the present campus, a part of the town common, with its old elms, was purchased from the Penns, and money from State and private sources began to accumulate. But a suitable building was scarcely completed in 1808 before it was destroyed by fire. This disaster was considered almost as a national calamity, and subscriptions poured in from all quarters. Jefferson gave \$100, and the French minister twice that sum. A new edifice was immediately begun, from plans by the government architect Latrobe, and in 1805 the admirable colonial building, the present West College, was completed and occupied.

For a time the State granted the college generous, and then less generous, annual appropriations. The Presbyterian Church, with which the college was annually associated, gave less assistance; a connection with the German Reformed Church was of even briefer duration; and although in 1821 Dr. John Mitchell left the presidency of Columbia College to become president of Dickinson, financial matters began to look increasingly dark until 1833, when the Methodist Episcopal Church provided an endowment, new trustees, and a new faculty under the presidency of Dr. John Durbin, then Chaplain of the Senate. Many of the professors and graduates of the college have also been members of the Protestant Episcopal Church. In charter and conduct, however, the college has always been sufficiently undenominational to become one of the fifty institutions entitled to participation in the provision fund of the Carnegie Foundation for the Advancement of Teaching.

A school of law was inaugurated in 1834; new buildings were opened in the years immediately following; and endowment, books, and equipment accumulated. At the early date of 1847 the college introduced the teaching of the modern languages; Southern graduates prevented Fortsum Lee from burning its buildings in 1863; and an elective system was adopted.

(Continued on page 29.)

"Old West," the most ancient of the Dickinson Buildings. Its Corner-stone was laid in 1783

was the first member of Congress to take up arms; and in 1783 he was the Chief Executive of both Delaware and Pennsylvania. He gave the college land, money, books, and its motto: "Fide et doctrina iuta libertas." The college's most carefree founder was Dr. Benjamin Rush, the first professor of chemistry in America, and perhaps the first American physician to be famed in Europe: a signer of the Declaration and surgeon-general of the Revolutionary army. His unusual combination of patriotic, scientific, and religious ardor is indicated by his placing on the college seal a Liberty cap, a telescope, and a Bible. For a quarter of a century, until his death, Dr. Rush's enthusiasm and effort for the college were unvaried.

Carlisle was chosen as a site because it had been a famous center of refuge from the Indians, had first urged revolution on the State Assembly, had sent its militia to Boston immediately after Bunker Hill, and had furnished General Washington in Ephraim Blaine, grandfather of the Senator, a commissary general whose private tortoise sustained the army at Valley Forge during the Revolutionary War. And it was improved at Carlisle, and there also the Hessians captured at Trenton built the military station still occupied by the Carlisle Indian School.

The first president of the college was Dr. Charles Nisbet of Edinburgh, a friend of John Witherspoon, whose appointment as president of

"East College," the second oldest of the Dickinson Dormitories. In front of it stands the Bulletin Tree

A Spirit in Prison*

A Novel

By Robert Michens

AUTHOR OF "THE CALL OF THE BLOOD," "BARBARY SHEEP," ETC.

CHAPTER XXV

THE spell of the Egyptian, which had departed so rapidly from Hermione, lingered with Ariois, that he was by nature more fatalistic than she was, and moreover he knew what she did not. Long ago he had striven against a fate. With the help of Gaspare he had conquered it—or so he had believed till now. But now he asked himself whether he had not only delayed its coming. If his suspicions were well founded—and since the expedition to the island with the Egyptian he felt as if it must be, then surely all he had done with Gaspare would be in vain at the last.

If his suspicions were well grounded, then certain things are unaltered. They have to happen for some reason, known only to the hidden Intelligence that fashions each man's character, that develops it in joy or grief, that makes it glad with feasting or forces it to feed upon the bread of tears.

Did Gaspare know? If the truth were what Ariois suspected, and Gaspare did know it, what would Gaspare do? That was a problem which interested Ariois intensely.

The Sicilian often said of a thing, "E il destino." Yet Ariois believed that for his beloved padrona he would fight to the death. He, Ariois, would leave this fight against destiny in the Sicilian. For him the Egyptian's philosophy: for him resignation to the inevitable, whatever it might be.

He said to himself that in due time that he had already done to ward off the assassin's rifle, how she had passed from girlhood to never to have done anything. Perhaps it would have been far better to have let the wave sweep over Hermione long ago. Perhaps even in that fight of his there had been secret self-sacrifice, the desire that she should not know how by his cry from Africa her happy life had been destroyed. And perhaps he was to be punished some day for that.

He did not know. But he felt, after all these years, that if to that hermitage of the sea Fate had really found the way, he must let things take their course. And it seemed to him as if the Egyptian had been mysteriously appointed to come into his life at that moment, to make him feel that this was so. The Egyptian had been like a messenger sent to him out of that East which he loved, which he had studied, but from which, perhaps, he had not learned enough.

Vere's letter came. He read it with eagerness and pleasure till he came to the postscript. That that startled him. He knew Vere had never read his books. He thought her far too young to read them. Till lately he had had almost a contempt for those who write with one eye on "in jure" file. Now he could conceive writing with a new pleasure something that Vere might read. But those books of his! Why had Hermione suddenly given that permission? He remembered Poppino. Vere must have told her mother of the scene with Poppino, and how her eyes had been opened to certain truths of life, how she had passed from girlhood to womanhood through that gate of knowledge. And Hermione must have thought that it was useless to strive to keep Vere back.

But did he wish Vere to read all that he had written? On Thursday he went over to the island with mingled regret and reluctance. That little home in the sea, washed by blue waters, cooled by blue skies, sun-kissed and star-kissed by day and night, drew and repelled him. There was the graciousness of youth there, of youth and promise; but there was tragedy there, too, in the heart of Hermione, and in Poppino, typified by the cross upon her cheek. And does she draw like?

For a moment he saw the little island with a great cloud above it. But when he landed and met Vere he felt the summer, and knew that the sky was clear.

Hermione was not on the island, Vere told him. She had left many apologies, and would be home for lunch. She had had to go into Naples to see the dentist. A tooth had troubled her in the night. She had gone by train. As Vere explained, Ariois had a moment of surprise, a moment of suspicion, even of vexation. But it passed when Vere said: "I'm afraid poor dear suffered a great deal. She looked dreadfully ill this morning as if she hadn't slept all night."

"Poveretta!" said Ariois.

He looked earnestly at Vere. This was the first time they had met since the revolution in Poppino. What the Marchese had seen Ariois saw more plainly, felt more strongly than the young Neapolitan had felt. But he looked at Vere, too, in search of some thing else, thinking of Bufo, trying to probe into the depth of

human mysteries, to find the secret spring that carried child to child.

"What do you want, Monsieur Emile?" he answered, smiling.

"I want to know how the work goes," he answered, smiling.

She smiled a little.

"And I want to tell you something," he added. "My talk with you roused me up. Vere, you set me working as I have not worked for a long while."

A lively pleasure showed in her face.

"Is that really true? But then I must be careful, or you will never come to see us any more. You will always be shut up in the hotel writing."

They mounted the cliff together and, without question or reply, as by a mutual instinct, turned towards the seat that faced Ischia, clear today, yet romantic with the mystery of heat. When they had sat down Vere added:

"And besides, of course, I know that it is mad for me to encourage you when you are depressed about your work. I have heard you say so often."

"Your mother has done a great deal for me," said Ariois, seriously—"far more than she will ever know."

There was a sound of deep, surely of eternal, feeling in his voice, which modestly touched the girl to the quick.

"I like to hear you say that—like that," she said, softly. "I think I must do a great deal for you all."

If Hermione could have heard them her torn heart might perhaps have ceased to bleed. It had been difficult to her to do what she had done, to leave the island that morning. She had done it to discipline her nature, as Poppino's escape themselves by night before the dawn. She had left Emile alone with Vere simply because she hated to do it.

The rising up of jealousy in her heart had frightened her. All night she had lain awake feeling this new and terrible emanation from her soul, conscious of this monster that lifted up its head and thrust forth one of the darkness.

But one word she had. She was frank with herself. She named the monster before she strove to fight it, to beat it back into the darkness from which it was emerging.

She was jealous, doubly jealous. The monopolizing instinct of strong-willed and deeply affectionate women was fiercely alive in her. Always, no doubt, she had had it. Long ago, when first she was in Sicily alone, she had dreamed of a love in the south—far away from the world. When she married she had carried her Mercury to the exquisite isolation of Monte Amato. And when that love was taken from her, and her child came and was at the age of blossom, she had brought her child to this life, this hermitage of the sea. Emile, too, her one great friend, she had never wished to share him. She had never cared much to meet him in society. Her instinct was to save him to herself, to be with him alone in unfrequented places. She was greedy as she was timid.

Which was it? Perhaps she lacked self-confidence, belief in her own attractive power. Life in the world is a fight. Women fight for their lovers, fight for their friends, with other women; these women, some of them, are born thieves, who are never happy unless they are taking from their sisters the possessions those sisters care for most. Hermione could never have fought with other women for the love or the friendship of a man. Her instinct, perhaps, was in every her treasure out of all danger into the wilderness.

Two treasures she had—Vere her child, Emile her friend. And now she was jealous of them with each other. And the enormous difference between their ages made her jealousy seem the more degrading. Nevertheless, she could not feel that it was monstrous. By a natural art they had excluded her from their lives, had withdrawn from her their confidence while giving it to each other. And their reason for doing this was sure of it now—was her own failure to do something in the world of art.

She was jealous of Vere, because of that confidence given to Emile, and of Emile because of his secret advice and help to Vere—advice and help which he had not given to the mother, because he had plainly seen that to do so would be useless.

And when she remembered this, Hermione was jealous, too, of the talent Vere must have, a talent she had longed for, but which had been denied to her. For even if Emile . . . and then again came the most hateful suspicion of all—that Emile could not lie about the things of art.

Had they spoken together of her failure? Again and again she asked herself the question. They must have spoken. They had spoken, she could almost hear their words, words of regret, or of pity. "We must not hurt her. We must keep it from her. We must temper the wind to the shorn lamb." The elderly man said

the child had read together the secret of her suffering, had understood together the tragedy of her failure. To the extremes of life, youth and age, she had appeared an object of pity.

And there she thought of her dead husband's reverence of her intellect, his admiration of her mental gifts; and an agony of longing for his love swept over her again, and she felt that he was the only person who had been able to love her really, and that, now he was gone, there was no one.

At that moment she forgot Gaspare. Her sense of being abandoned, and of being humiliated, swept out many things from her memory. Only Maurice had loved her really. Only he had set her on high, where even the humblest woman longs to be set by some one. Only he had thought her better, braver, more worshipful, more lovable, than any other woman. Such love, without bringing conceit to the creature loved, gives power, creates much of what it believes in. The lack of any such love seems to withdraw the little power that there is.

Hermione, feeling in the humiliation of the imagination that she was less than nothing, clung desperately to the memory of him who had thought her much. The dividing years were gone. With a stranger, a beautiful and terrible fresh-faced, the days of her love came back. She saw Maurice's eyes looking at her with that simple, almost reverent admiration which she had smiled at and adored.

And she gripped her memory. She clung to it feverishly as she had never clung to it before. She told herself that she would live in it as in a house of shelter. For there was the desolate wind outside.

And she thought much of Ruffo, and with a strange desire—to be with him, to search for the look she loved in him. For a moment with him she had seemed to see her Mercury in the flesh. She must watch for his return.

When the morning came she began her fight. She made her excuse, and left the morning free for Emilio to be with Vere.

Two dreary hours she spent in Naples. The buzzing city affected her like a nightmare. Coming back through Mergellina she eagerly looked for Ruffo. But she did not see him. Nor had she seen him in the early morning when she passed by the harbor where the jacks were lying in the sun. Gaspare came with the boat to take her over from the nearest village to the island.

"Don Emilio has come!" she asked him, as she stepped into the boat.

"Si, signora. He has been on the island a long time."

Gaspare sat down facing his padrona, and took the oars. As he rowed the boat out past the ruined "Palace of the Spirits" he looked at Hermione, and it seemed to her that his eyes pined her.

Could Gaspare see what she was feeling, her humiliation, her secret jealousy? She felt as if she were made of glass. But she returned his gaze almost sternly, and said:

"What's the matter, Gaspare? Why do you look at me like that?"

"Signora?"

He seemed startled, and slightly reddened, then looked hard and almost sickly.

"May I not look at you, signora?" he asked, rather defiantly.

"Have I the evil eye?"

"No—no, Gaspare. Only—only you looked at me as if something were the matter. Do I look ill?"

She asked the question with a forced lightness, with a smile. He answered bluntly:

"No, signora. You look very ill."

She put up her hand to her face instinctively, as if to feel whether his words were true.

"But I'm perfectly well," she said.

"You look very ill, signora," he returned.

"I'm a little bit tired, perhaps."

He said no more, and rowed steadily on for a while. But presently she found him looking gravely at her again.

"Signora," he began, "the signorina loves the island."

"Yes, Gaspare."

"Do you love it?"

The question startled her. Had he read her thoughts in the last days?

"Don't you think I love it?" she asked.

"You go away from it very often, signora."

"But I must occasionally go into Naples!" she protested.

"No, signora."

"Well, but mustn't I?"

"Not to us, signora. Perhaps we have been here long enough. Perhaps we had better go away from here."

He spoke slowly, and with something less than his usual firmness, as if in his mind there was uncertainty, some indecision, or some conflict of desires.

"Do you want to go away?" she said.

"It is not for me to want, signora."

"I don't think the signorina would like to go, Gaspare. She hates the idea of leaving the island."

"The signorina is not very one," he returned.

Habitually blunt as Gaspare was, Hermione had never before heard him speak of Vere like this, not with the least impertinence, but with a certain roughness. Today it did not hurt her. Now, indeed, could it ever have hurt her, coming from one so proven as Gaspare. But to-day it even warmed her, for it made her feel that some one was thinking exclusively of her—was putting her first. She longed for some expression of affection from some one.

She felt that she was starving for it. And this feeling made her say:

"How do you mean, Gaspare?"

"Signora, it is for you to say whether we shall go away or stay here."

"You—you put me first, Gaspare!"

She was ashamed of herself for saying it. But she had to say it.

"First, signora? Of course you are first."

He looked genuinely surprised.

"Are you not the padrona?"

he asked. "It is for you to command."

"Yes. But I don't quite mean that."

She stopped. But she had to go on.

"I mean, would you rather do what I wanted than what any one else wanted?"

"Si, signora—much rather."

There was more in his voice than in his words.

"Thank you, Gaspare," she said.

"Signora," he said, "if you think we had better leave the island, let us leave it. Let us go away."

"Well, but I have never said I wished to go. I am—" She paused. "I have been very contrary to be here."

"Va bene, signora."

When they reached the island Hermione felt nervous, almost as if she were to meet strangers who were critical, who would appraise her and be ready to despise her. She told herself that she was mad to feel like that; but when she thought of Emilio and Vere talking of her failure—of their secret combined action to keep from her the knowledge of the effort of the child—that seemed just

then to her a successful rivalry concealed—she could not dismiss the feeling.

She dreaded to meet Emilio and Vere.

"I wonder where they are," she said, as she got out. "Perhaps they are on the cliff, or out in the little boat. I'll go into the house."

"Signora, I will go to the boat and see if they are there."

But he ran off, springing up the steps with a strong agility, like that of a boy.

She hurried after him and went into the house. After what he had said in the boat she wished to look at herself in the glass to see if there was anything strange or painful, anything that might rouse surprise, in her appearance. She gained her bedroom and went at once to the mirror.

Hermione was not by nature at all a self-conscious woman. She knew that she was plain, and had sometimes, very simply, regretted it. But she did not generally think about her appearance, and very seldom now wondered what others were thinking of. When Maurice had been with her she had often indeed secretly compared her own ugliness with his beauty. But a great love breeds many regrets as well as many joys. And that was long ago. It was years since she had looked at herself in the glass with any keen feminine anxiety, any tremor of fear, or any cruel self-

"Hush, Peppina! Now don't be afraid of me"

criticism. But now she stood for a long time before the glass, quite still, looking at her reflection with wide, almost with staring eyes.

It was true what Gaspare said. She saw that she was looking ill, very different from her usual strong self. There was not a thread of white in her thick hair, and this fact, combined with the eagerness of her expression, the strong vivacity and intelligence that normally shone in her eyes, deceived many people as to her age. But to-day her face was stained, haggard, and feverish. Under the heavy lids that the sun eyes had given to her complexion there seemed to lurk a sickly white, which was most markedly suggested at the corners of the mouth. The cheek bones seemed unusually prominent. And the eyes held surely a depth of loneliness.

Hermione approached her face to the mirror till it almost touched the glass. The reflected eyes drew hers. She gazed into them with a scrutiny into which she seemed to be pouring her whole force, of both soul and body. She was trying to look at her nature, to see its shape, its color, its expression, so that she might judge of what it was capable—whether for good or evil. The eyes into which she looked both helped her and frustrated her. They told her much—too much. And yet they baffled her. When she would know all they seemed to substitute themselves for that which she saw through them, and she found herself noticing their size, their prominence, the exact shade of their brown hair. And the quick human creature behind them was hidden from her.

But Gaspare was right. She did look ill. Emilia would notice it directly.

She washed her face with cold water, then dried it almost cruelly with a rough towel. Having done this, she did not look again into the glass, but went at once downstairs. As she came into the drawing-room she heard voices in the garden. She stood still and listened. They were the voices of Vere and Emilia talking tirelessly. She could not hear what they said. Had she been able to hear it she would not have listened. She could only hear the sound made by their voices, that noise by which human beings strive to explain, or to conceal, what they really are. They were talking seriously. She heard no sounds of laughter. Vere was saying much. It seemed to Hermione that Vere never talked so much and so eagerly to her, with such a ceaseless vivacity. And there was surely an intimate sound in her voice, a sound of being warmly at ease, as if she spoke in an atmosphere of ardent sympathy.

Again the jealousy came in Hermione, acute, fierce, and traveling like a needle being moved steadily, point downwards, through a network of quivering nerves.

"Vere!" she called out. "Vere! Emilia!"

Was her voice cold, or was it loving?

They did not hear her. Emilia was speaking now. She heard the deep, booming sound of his powerful voice, that seemed expressive of strength and will.

"Vere! Emilia!"

As she called again, she went towards the window. She felt passionately excited. The excitement had come suddenly to her when they had not heard her first call.

"Emilia! Emilia!" she repeated. "Emilia!"

"Madre!"

"Hermione!"

Both voices sounded startled.

"What's the matter?"

Vere appeared at the window, looking frightened.

"Hermione, what is it?"

Emilia was there beside her. And he, too, looked anxious, almost alarmed.

"I only wanted to let you know I had come back," said Hermione, crushing down her excitement, and forcing herself to smile.

"But why did you call like that?"

Vere spoke.

"Like what? What do you mean, figlia mia?"

It sounded—

She stopped and looked at Artois.

"It frightened me. And you, Monsieur Emilia?"

"I, too, was afraid for a moment that something unpleasant had happened."

"You nervous people! Isn't it harmless?"

As they looked at her she felt they had been talking about her, about her failure. And she felt, too, as if they must be able to see in her eyes that she knew the secret Vere had wished to keep from her and thought she did not know. Emilia had given her a glance of intense scrutiny, and the eyes of her child still questioned her with a sort of bright and warning expression.

"You make me feel as if I were with detectives," she said, laughing, but unreasonably. "There's really nothing the matter."

"And your tooth, madre! Is it better?"

"Yes, quite well. I am perfectly well. Let us go in."

Hermione had said to herself that if she could see Emilia and Vere together, without any third person, she would know something that she felt she must know. When she was with them she seemed to be a watcher. And now her whole being was strung to attention.

But it seemed to her that the more reason they, too, were on the alert, and so were not quite natural. And she could not be sure of certain things unless—the atmosphere was normal. So she said to herself now, though before she had had the inimitable confidence of woman in certain detective instincts claimed by the whole sex.

At one moment the thing she feared—and her whole being revolved round the thought of it with a shaking disgust—the thing she feared seemed to her fact. Then something occurred to make her distrust herself. And she felt that betraying imagination of hers at work, obscuring all issues, tricking her, punishing her.

And when the meal was over she did not know at all. And she

felt as if she had perhaps been deliberately hoaxed—not, of course, by Vere, of whose attitude she was not, and never had been, doubtful, but by Emilia.

When they got up from the table Vere said:

"I'm going to make the aunts."

"You look remarkably wide awake. Vere?" Artois said, smiling.

"But I'm going to, because I've had you all to myself the whole morning. Now it's madre's turn. Isn't it, madre?"

The girls' remark showed her some of their complete triple-entendre, but it emphasized to Hermione her own *crux* sense of being in the wilderness. And she even felt that it should be supposed she wanted Emilia's company. Nevertheless, she restrained herself from making any disclaimer. Vere went upstairs and she

and Artois went out and sat down under the trellis. But with the removal of Vere a protection and safety valve seemed to be removed, and neither Hermione nor Emilia could for a moment continue the conversation. Again a sense of humiliation, of being mindless,

nothing, in the eyes of Artois, came to Hermione, diminishing all her powers. She was never a conceited, but she had often been a self-reliant, woman. Now she felt a humbleness such as she knew

no one should ever feel—a humbleness that was contemptible,

that felt itself incapable, unworthy of notice. She tried to resist it, but when she thought of this man, her friend, talking over her failure with the child in whom he must surely believe, she could

not. She felt, "Vere can talk to Emilia better than I can. She

interests him more than I." And then her years seemed to gather round her and whip her. She shrank beneath the thought of

years, had not even brought to her those gifts of the mind with which it often mortally replaces the bodily gifts and graces it is

so eager to remove.

"Hermione!"

"Yes, Emilia!"

She turned slowly in her chair, forcing herself to face him.

"What did you think of my—companion the other night?"

"Oh, by the way, what is his name?"

"I don't know."

"You don't know?"

She was honestly and exceedingly surprised.

"But you brought him to the house."

"Yes. Can you forgive me?"

"You don't know him?"

"I met him by chance at the timepiece. We talked. He had a

boat, he offered to take me back. But I wanted to come to the

island. I meant, of course, to leave him in the boat. But when

we reached the island I had to bring him ashore."

"I don't mind. But why did you?"

"I thought his personality so remarkable, so powerful, that I

wished you to come in contact with it, if only for a moment. Did

it affect you?"

"In what way?"

"In what way?"

"If you can ask—it did not."

"I felt when I was with him a certain dullness, as if I were in

the grasp of a Fate. But it went away with him, or very soon

afterwards."

"Ah! By the way, he gave you his card."

"Yes, but it got lost."

"You didn't look it up?"

"I meant to, but I left it lying on the table, and Giulia must

have thrown it away, or dropped it somewhere when she cleared

away the coffee."

"Then we shall probably never know who the Egyptian is."

"Was he an Egyptian? I saw that he was an Oriental."

"He told me he was an Egyptian."

The subject dropped.

"Did you have a pleasant morning with Vere?" Hermione said,

after a moment, trying to speak very naturally.

"Yes, Oh,"—he set forward in his chair—"she told me something

that rather surprised me—that you had told her she might

read my books."

"Well?"

Hermione's voice was rather hard.

"Well, I never meant them for 'la jeune fille.'"

"You consider Vere?"

"Is she not?"

She felt he was condemning her secretly for her permission to

Vere. What could he think if he knew her under-reason for

giving it?

"You don't wish Vere to read your books, then?"

"No. And I ventured to tell her so."

Hermione left her.

"What did she say?"

"She said she would not read them."

"Oh."

She looked up and met his eyes, and was sure she read con-

demnation in them.

"After I had told Vere—" she began.

She was silent to defend herself, to tell him how she had gone

to Vere's room intending to withdraw the permission given; but

solidly she realized clearly that she, a mother, was being secretly

taken task by a man for her conduct to her child.

That was intolerable.

And Vere had yielded to Emilia's prohibition, though she had

eagerly resisted her mother's attempt to retreat from the promise

made. That was more intolerable.

She still without saying anything, her knees were trembling

under her this summer gown. Artois felt something of her agita-

tion, perhaps, for he said, with a kind of hesitating diffidence,

very rare in him:

"Of course, my friend, I would not interfere between you and

Vere, only, as I was concerned, as they were my own writings that

were in question—"He broke off: "You won't misunderstand my mothers?" he concluded.

"Oh no."

He was more conscious that she was feeling something acutely. "I feel that I perceive, understand why you gave the permission at this particular moment," he continued, anxious to excuse her to herself, and to himself.

"Why?" Hermione said, sharply.

"Wasn't it because of Peppina?"

"Peppina?"

"Yes. Didn't you?"

He looked into her face and saw at once that he had made a false step, that Vere had not told her mother of Peppina's outburst.

"Didn't I—what?"

He still looked at her.

"What?" she repeated. "What has Peppina to do with it?"

"Nothing. Only—don't you remember what you said to me about not keeping Vere in cotton-wool?"

She knew that he was deceiving her. A hopeless, desperate feeling of being in the dark rushed over her. What was friendship without complete sincerity? Nothing—less than nothing. She felt as if her whole body stiffened with a proud reserve to meet the reserve with which he treated her, and she felt as if her friend of years—the friend whose life she had perhaps saved in Africa—had turned on that moment into a stranger, or—or even into an enemy. For this further withdrawal from their beautiful and open intimacy was like an act of hostility. She was almost dazed for an instant. Then her brain worked with feverish activity. What had Emile meant? Her permission to Vere was connected in his mind with Peppina. He must know something about Vere and Peppina that made them almost her condition, and her desire, usually so sensitive, so receptive, so warmly beguile when it was turned to his, was hard and cold.

"Emile," she said, "what was it you meant about Peppina? I think I have a right to know. I brought her into the house. Why should Peppina have anything to do with my giving Vere permission to read your books?"

Artois' instinct was not to tell what Vere had not told, and therefore had not wished to be known. Yet he hated to shuffle with Hermione. He chose a middle course.

"My friend," he said, quietly, but with determination, "I made a mistake. I was following foolishly a wrong track. Let us say no more about it. But do not be angry with me about the books. I think my motive in speaking as I did to Vere was probably partly a selfish one. It is not only that I wish Vere to be as she is for as long a time as possible, but that I—well, don't think me a great coward if I say that I almost dread her discovery of all the cruel knowledge that is mine, and that I have, perhaps wrongly, brought to the attention of the world."

Hermione was amazed.

"You regret having written your book?" she said.

"I don't know—I don't know. But I think the happy confidence, the sweet respect of youth makes one regret a thousand things. Don't you, Hermione? Don't you think youth is often the most terrible tutor one can have?"

She thought of Rufio smiling. "Oh, *diove lung bianca* de F. re-tair"—and suddenly she felt that she could not stay any longer with Artois just then. She got up.

"I don't feel very well," she said.

Artois sprang up and came towards her with a face full of concern. But she drew back.

"I didn't sleep last night—and then going into Naples—I'll go to my room and be alone. I'll keep quiet. Vere will look after you. I'll be down at ten."

She went away before he could say or do anything. For some time he was alone. Then Vere came. Hermione had not told her of this episode, and she had only been vaguely aware. The pretended sorrow had lasted long enough. When Artois told her about her mother she wanted to run away at once, and see what was the matter, see if she could do something. But Artois stopped her.

"I shouldn't leave her to rest," he said. "I—I feel sure she wishes to be alone."

Vere was looking at him while he spoke, and her face caught the gravity of his, reflected it for a moment, then showed an uneasiness that deepened into fear. She laid her hand on his arm.

"Monsieur Emile, what is the matter with mother?"

"Only a headache, I fancy. She did not sleep last night, and—"

"No, no; the real matter, Monsieur Emile."

"What do you mean, Vere?"

The girl looked excited. Her own words had revealed to her a feeling of which till then she had only been vaguely aware.

"Mother has seemed different lately," she said. "Then different. I am sure she has. What is it?"

As the girl spoke, and looked keenly at him with her bright, searching eyes, a thought came, like a shock, upon Artois, a thought that almost frightened him. He could not tell it to Vere, and almost immediately he thrust it away from his mind. But Vere had seen that something had come to him.

"You know what it is!" she said.

"No, no, no."

"Monsieur Emile?"

Her voice was full of reproach.

"Vere, I am telling you the truth," he said, earnestly. "If there is anything serious troubling your mother I do not know what it is. She has symptoms of—of—of—"

"This is something fresh," the girl said. She thrust forward her little chin decisively. "This is something new."

"It cannot be that," Artois said to himself. "It cannot be that."

To Vere he said, "Sleeplessness is terribly distressing."

"Well—but only one night."

"Perhaps there have been others."

In reply Vere said:

"Monsieur Emile, you remember this morning, when we were in the garden, and mother called?"

"Yes."

"If you know, the way she called made me feel frightened?"

"We were so busy talking that the sudden sound startled us."

"No, it wasn't that."

"But when we came your mother was smiling—she was perfectly well. You let your imagination—"

"No, Monsieur Emile, indeed I don't."

He did not try any more to remove her impression. He saw that to do so would be quite useless.

"I should like to speak to Gaspard," Vere said, after a moment's thought.

"Gaspard? Why?"

"Perhaps you will laugh at me! But I often think Gaspard understands me better than any of us. He knows Emile."

"Gaspard has been with your mother a very long time."

"Yes, and in his way he is very clever. Haven't you noticed it?"

Artois did not answer this. But he said:

"Follow your instincts, Vere. I don't think they will often lead you wrong."

At last-time Hermione came from her bedroom looking calm and smiling. There was something deliberate about her serenity, and her eyes were tired, but she said the little rest had done her good. Very instinctively felt that her mother did not wish to be observed, to do so might give her some further condition, and Artois took Vere's cue. When tea was over Artois said:

"Well, I suppose I ought to be going."

"Oh no," Hermione said. "We asked you for a long day. That means dinner."

Her voice sounded determined, and therefore formally. Artois felt chilled. For a moment he looked at her doubtfully.

"Well, but, Hermione, you aren't feeling very well."

"I am much better now. Do stay. I shall rest, and Vere will take care of you."

It struck him for the first time that she was becoming very ready to substitute Vere for herself as his companion. He wondered if he had really offended or hurt her in any way. He even wondered for a moment whether she was not pleased at his spending the summer in Naples—whether, for some reason, she had wished, and still wished, to be alone with Vere.

"Perhaps Vere will get sick of looking after an—old man," he said.

"You are not an old man, Monsieur Emile. Don't tout!"

"Tout?"

"Yes, for compliments about your youth. You meant me, you meant us both, to say how young you are."

She spoke gently, laughingly, but he felt she was cleverly and secretly trying to smooth things out, to cover up the difficulty that had intruded itself into their generally natural and simple relations.

"And your mother says nothing," said Artois, trying to fall in with her desire, and to restore their wonted liveliness. "Don't you look upon me as almost a boy, Hermione?"

"I think sometimes you seem wonderfully young," she said.

Her voice suggested that she wished to please him, but also that she meant what she said. Yet Artois had never felt his age more acutely than when she finished speaking.

"I am a poor companion for Vere," he said, almost bitterly. "She ought to be with friends of her own age."

"You mean that I am a poor companion for you, Monsieur Emile. I often feel how good you are to put up with me in the way you do."

The gaiety had gone from her now, and she spoke with an earnestness that seemed to him wonderfully gracious. He looked at her, and his eyes flashed her gently.

"Take Emile out in the boat, Vere," Hermione said, "while I read a book till dinner-time."

At that moment she longed for them to be gone. Vere looked at her mother, then said:

"Come along, Monsieur Emile. I'm sorry for you, but madre wants rest."

She led the way out of the room.

Hermione was on the sofa. Before he followed Vere, Artois went up to her and said:

"If you can't stay, you must come out with us, my friend! Perhaps the air on the sea would do you good!"

"No, thank you, Emile; I really think I had better stay quietly here."

"Very well."

He waited for a moment, then he went out and left her. But she had been a question in his eyes.

When he had gone, Hermione took up a book and read for a little while, always listening for the sound of cars. She was not sure Vere and Emile would go out in the boat, but she thought they would if they came out in the open sea beyond the island. It was possible that she might hear them. Presently, as she did not hear them, she got up. She wanted to satisfy herself that they were at sea. Going to the window, she looked out. But she saw no boat, only the great plain of the radiant waters. They made her feel alone—very, she did not know then. But it was really something of the same feeling which had come to her long ago during her first visit to Sicily. In the contemplation of beauty she

(Continued on page 28.)

ALL AT SEA

A SPIRIT IN PRISON

(Continued from page 25.)

knew the need of love, knew it with an intimacy that was cruel.

She came away from the window and went to the terrace. From there she could not see the boat. Finally she went to the small pavilion that overlooked the Saint's Pool. Leaning over the parapet, she perceived the little white boat just starting round the bluff towards the Grotto of Virgil. Vere was rowing. Hermione saw her thin figure, so impregnated with the narrow charm of youth, bending backwards and forwards to the oars. Emile's big form leaning against the cushions as if at ease. From the dipping oars came twinkling lines of light that raved out and spread like the opened sticks of a fan upon the sea. Riggling the shore, the boat slipped out of sight.

"Suppose they had gone forever—gone out of my life!" Hermione said that to herself. She fancied she still could see the faint commotion in the water that told where the boat had passed. Now it was turning into the Grotto of Virgil. She felt sure of that. It was entering the shadow where she had shamed to Emile not long ago the very depths of her heart.

How could she have done that? She grew hot as she thought of it. In her new and bitter resolve she hated to think of his possession that could never be taken from him, the knowledge of her hidden despair, her hidden need of love. And by that avowal of hatred of his knowledge she measured the gulf between them. When had come the very first narrow feature she scarcely knew, but she knew how today the gulf had widened.

That permission of hers to Vere to read Emile's books! And Emile's authority governing her conduct, substituted surely for hers! The gulf had been made wider by her learning that episode; and the fact that secretly she felt her permission ought never to have been given raised her the more bitter. Vere had yielded to Emile because he had been in the right. Inductively her child had known which of the two with whom she had to deal was swayed by an evil mood, and which was thinking rightly, only for her.

Could Vere see into her mother's heart? Hermione had a moment of panic. Then she laughed at her folly.

And she thought of Peppina, of that other secret which cruelly existed, but which she had never suspected till that day. The boat was gone, and she knew where. She went back into the house and rang the bell. Giulia came.

"Oh, Giulia," Hermione said, "will you please ask Peppina to come to my sitting-room? I want to speak to her for a moment."

"Ni, signora."

Giulia looked at her padrona, then added:

"Signora, I am sure I was right. I am sure that girl has the evil eye."

"Giulia, what nonsense! I have told you often that such signs are silly. Peppina has no power to do us harm. Poor girl, we ought to pity her."

Giulia's fat face was very grave and quite unconvinced.

"Signora, since she is here the island is not the same. The signorina is not the same, you are not the same, the French signora is not the same, the most dangerous is different. The count speaks with him now. Trouble is with us all, signora."

Hermione shook her head impatiently. But when Giulia was

gone she thought of her words about Gaasper. Words, even the simplest, spoken just before some great moment of a life, some high triumph or deep catastrophe, stick with resolution in the memory. Lucrezia had once said of Gaasper on the terrace before the Casa del Prete. "One cannot speak with him to-day." And she had added, "It is terrible to-day." That was on the evening of the night on which Gaasper's dead body was found. (After since then Hermione had thought that Gaasper had seemed to have a prevision of the disaster that was approaching.) And now Giulia said of him, "The count speaks with him now." The same words. Was Gaasper as a stormy petrel?

There came a knock to the door of the sitting-room to which Hermione had gone to wait for the coming of Peppina.

"Come in."

The door opened and the disfigured girl entered, looking anxious.

"Come in, Peppina. It's all right. I only want to speak to you for a moment."

Hermione spoke kindly, but Peppina still looked nervous.

"Ni, signora," she murmured.

And she remained standing near the door, looking down.

"Peppina," Hermione said, "I'm going to ask you something, and I want you to tell me the truth without being afraid."

"Ni, signora."

"You remember, when I took you, I told you not to say anything to my daughter, the signorina, about your past life, your aunt and—all you had gone through. Have you said anything?"

Peppina looked more brightened.

"Signora," she began. "Madonna! It was not my fault, it was not my fault!"

She raised her voice, not began to speculate.

"Hush, Peppina! Now don't be afraid of me."

"You are my preserver, signora! My saint has forgotten me, but you—"

"I will not leave you to the streets. You must trust me. And now tell me—quietly—what have you told the signorina?"

And presently Peppina was induced to be truthful, and Hermione knew of the outbreak in the night, and that "the foreign signora" had known of it from the moment of its happening.

The signorina was so kind, signora, that I forget. I told her all—I told her all—I told her—"

Once Peppina had begun to be truthful she could not stop. She recalled—or seemed to—the very words she had spoken to Vere, all the details of her narration.

"And the foreign signora? Was he there too?" Hermione asked at the end.

"No, signora. He went away. The signorina told him to go away and leave us."

Hermione dismissed Peppina quietly.

"Please don't say anything about this conversation, Peppina," she said, as the agitated girl prepared to go. "Try to obey me this time, will you?"

She spoke very kindly, but very firmly.

"May the Madonna take my tongue if I speak, signora!"

Peppina raised her hand.

As she was going out Hermione stared at the cross upon her cheek.

(To be Continued.)

Leaves from the Diary of a Motorist

By HELENA SMITH DAYTON

January 1.—Three symptoms warn me that I am about to become a motor maniac: my wife has ordered motor outfit, my daughters have invited friends upon carefully planned tours, and my son Phil has written for catalogues.

January 18.—Purchased tons of motor literature, and have become friendly with several hundred agreeable salesmen, all enthusiastically selling "the best car."

February 11.—Convinced that I have selected the best machine on the market. Agent says I'm a wonder.

March 2.—Arrival of new car. Family enthusiastic. Dusted off few specks of dust with silk pocket-handkerchief. Hope nothing will mar the fine finish.

March 15.—Engaged incognito friend for chauffeur. We all hope to improve our record. Maybe he will get us into society.

March 20.—Something out of kilter, but agent is the limit. Thinks he'll have it running in a day or so.

April 1.—While we were admiring the view to-day, Charlie Speedwell passed in that old humor of his. After we found the car couldn't be fixed, took the trolley home. The count does not understand the car.

April 1.—Maybe it's the car.

May 1.—Everything lovely. Best car; best driver; lovely roads, glorious weather; agreeable party. What did we do with our automobile?

May 29.—Arm still in sling. Count's fault. New man coming to-morrow.

June 5.—Must appear in court to-morrow. Weren't going a bit far?

June 7.—Car undergoing slight repairs.

June 20.—Blight repairs?

June 21.—Surely follow, that agent.

June 26.—Learned why the chicken crosses the road: to pay the mortgage of the old farm.

July 9.—Question for delicting societies: Is it cheaper in motor in town or in the country? After encountering a country constable, paying for one perfectly good dog, and purchasing gasoline from an alleged pseudomilitary rural party, have decided that that pure motorist should not leave the boulevard.

July 18.—Charlie Speedwell's car certainly can go some.

August 7.—Car behaving beautifully.

September 17.—Decided to quit the motor game.

September 28.—Sold my car.

October 4.—Lovely days for motorist. Bright?

October 20.—How my family miss that car! Does seem queer to walk everywhere. It used to be mighty handy. . . . Perhaps in the spring.

November 28.—Wonder how the agents got impression I was interested in automobiles? Merely dropped in to look over a few new models. Still, I gave my order on condition it was not delivered until June.

December 10.—Been trying to hurry up delivery of that car of mine.

Dickinson's 125th Anniversary

(Continued from page 2.)

as early as 1863. From the beginning the attention given to science was unusual. A tutor in that field was appointed in 1872, and in 1880 Dr. Rush received "the most complete and splendid electrical and galvanic apparatus ever imported into our country."

Shortly afterward Dr. Thomas Cooper of Oxford, a friend of Prof. Jefferson, and Privatdozent, and a noted scientific discoverer and editor, became professor of chemistry, adding some of Privatry's apparatus to the equipment of the college. In 1885 the directorship of the department was taken by Spencer Baird, a graduate of the college, and afterward for nearly forty years assistant secretary and secretary of the Smithsonian Institution. In 1884, a thoroughly equipped scientific building was completed through the generosity of Jacob Touse, the founder of Touse Institute at Port Deposit, Maryland.

During the present administration of Dr. George Edward Reed, which began in 1880, the college has doubled in size, has increased its endowment, and has acquired six of its twelve buildings, one of them being the gift of Andrew Carnegie, a few from 1892 to 1904, in memory of his friend Menesius D. Conway, of the Class of 1860. The present attendance is 314 in the college, 94 in the law school, and 103 in Conway Hall, the preparatory school. Women have been admitted since 1884. There are forty officers of instruction and 40,000 volumes in the libraries.

The president of the Carnegie Foundation has published the opinion that Dickinson has had more eminent alumni than any other institution of its size. With Princeton and Bowdoin alone it shares the distinction of having produced the country with both a President—James Buchanan, 1808—and a Chief Justice of the Supreme Court—Roger Taney, 1795. Out of 2,500 alumni the college has graduated 9 ex-senators, 12 Senators, 1 Congressmen, 9 foreign ministers, 6 generals, 10 governors, 8 judges, 5 moderators, 940 other elegants, 40 college presidents, and 130 college professors, 700 attorneys, and 350 physicians. Bishop Winchester, founder of the church bearing his name, and Bishop Cummings, founder of the Reformed Episcopal Church, were both Dickinsonians, as were also the orator who delivered the Senator's impeachment of Johnson and its eulogy at Lincoln, the engineer of the Cretan Aqueduct, the alienist who converted Gautier, Admiral Dewey's chief of staff at Manila, and the missionary who directed the infiltration and the defense of the Pekin embassies against the Boxers. To New York the college has furnished the Reverend Charles F. Doane of the Church of the Strangers, and the late Archbishop Tiffany, a superintendent of city schools, and half a dozen Columbia professors; as well as numerous other editors, clergymen, scientists, and men of affairs.

Features of the anniversary celebration, which was attended by larger numbers of alumni, were the unveiling of new portraits of President Dickinson and Dr. Rush, and the presentation of greetings from all of the older American colleges.

Brazil's Campaign Against Tuberculosis

The federal government of Brazil is preparing a campaign against tuberculosis in the cities of the Republic, especially in Rio de Janeiro, equal to that waged against yellow fever, which has placed the capital among the most healthful cities of the world.

The present number of deaths due to consumption in Rio de Janeiro and in Brazil generally explains the extraordinary measures to be taken by the government against tuberculosis, according to the announced plans. The tables of mortality of the federal district show that out of a total of 14,000 deaths in 1905, 2,603 were due to pulmonary tuberculosis, as compared with 287 from the

deadly yellow fever. In 1906, out of a total of 13,556 deaths, 2,649 were from tuberculosis, while in 1907 out of a total of 13,014 deaths 2,587 was the proportion. Therefore of all deaths in Rio de Janeiro during the years one to five were due to consumption, and that, too, in spite of the highly commendable work done by the League Against Tuberculosis, whose efficacy is shown by the slightly decreased record for the past two years. What systematic work in sanitation can do, however, is shown in the table of deaths given in the case of yellow fever. In the latter disease the deaths in 1905 were 287; in 1906, 42; and in 1907, 59. The disease, which has been the object of the general public in Rio de Janeiro is concerned, the few cases noted arising in out-of-the-way places, and being so well guarded and pursued that all danger of epidemic under present regulations is done away with.

Naturally, with such success in disposing of yellow fever, the sanitary authorities of Brazil feel that something can be done against tuberculosis. The same sanitary cities in the country which are included in the plans outlined in this report, but for the time being, and with the initial expense, most attention will be paid to Rio de Janeiro as the capital and chief city of the nation. This new campaign involves the expenditure of \$1,250,000 as a beginning of the movement. The plan includes legislation which may have a marked influence upon similar movements in the world generally.

The Brazilian project includes as its material features the compulsory reporting of every case of tuberculosis to the sanitary authorities, the complete assumption of charge of all cases of tuberculosis by public authorities, the establishment of hospitals, with complete isolation, for tuberculous-injected invalids, and of hotels and boarding houses, agricultural colonies, and sanatoria for those not invalid; the absolute refusal of admission into Brazil of any person or animal having tuberculosis; the inspection of all foods and materials likely to carry bacilli; the disease, with power to destroy anything infected; and the betterment of food, housing, and other conditions of life for the large mass of the population among whom tuberculosis is raging.

The "Empire" of Haiti

THAT little republic of Haiti which now and then chooses to calumniate her domestic and foreign affairs with a so-called revolution ran boast of a rather busy period of her history. In 1811 the negro general Christophe proclaimed himself emperor, and, in spite of the smallness of his empire, surrounded himself with a pompous official household like the grand monarchs of Europe. He ended in 1820 by suicide, and up to 1849 the little state enjoyed a comparatively party fights and revolutions as a republic. In the latter year another negro, General Faustin Soulouque, seized the government, and on August 20 took possession of the state as its proclaimed emperor, his only faithful Faustin I. He established his government upon the pattern of Napoleon's. That he, who was born as a slave, had some difficulty in reading and writing did not bother him. For his constitution he ordered exact regulations of the crown and the coronation robe of the Emperor of the French; to pay for them, of course, he decreed unnecessary, and the "Purveyors to His Majesty" were very glad to receive some payments by and by. The civil list of the emperor was fixed at 150,000 gourdes (1 gourde = 96¢); that of the empress, black as her spouse, at 50,000 gourdes. Her court attendants included two ladies of honor, fifty ladies of the court, and twenty-two waiting maids. The court had a grand almoner, a manager of the imperial theatre, a governor of the imperial palace, etc. The emperor included two orders of knighthood, the order of St. Faustin for military merit, and the order of the legion of honor. His division generals and vice-admirals he made princes and dukes, and the brigadier-general counts; every superior customs officer

became a baron. All at once Haiti with its not quite 100,000 square miles and its population of about 900,000, had 59 dukes, 100 counts, 310 barons, and 240 knights.

The names of this brand-new aristocracy were taken from James and fantastic feudal estates which Faustin had created by a mere word and given ridiculous and burlesque names. John Joseph, the emperor's brother, was named Duke of Port-de-Paix (Port-happy); Charles Alerte, great-brave chamberlain, was duke des Carottes (i. e., of the parsnips); de Mare, Duke de la Limonade; Liming, Duke de la Marmelade. The most humorous names were those of some of the counts. There were the Count des Citres de Fer du Nord; Noël Jean Jacques, Count de Coupe-Hairine (he was the librarian general of the empire); Dumas Labre-dieu, Count de la Tortue; our Count du Nul-trou-deux; our de Grand-Gueuser (large throat); des Guépées (wasps); du Diamant, de la Bombardé, etc. One of the knights had to bear himself called Knight Coco. In 1824 a military revolt made an end to this glorious monarchy, and wiped all those fine names, titles, and dignities out of existence as quickly as they had sprung up.

The First American "Dreadnought"

LAUNCHING THE NAVY'S NEW "ALL-BIG-GUN" BATTLESHIP

BAPTIZED across the bows with a bottle of champagne flung from the hand of Miss Carol Newberry, of Detroit, the new battleship *Michigan* glided into the Delaware River at Camden, from the yard of the New York Shipbuilding Company, on May 26. The titian infant's baptism was saluted by the gunboat *Dolphin*, which brought to the yard Assistant-Secretary Newberry, Secretary Garfield, Governor Warner of Michigan, and the United States Senators from that State. It took three hundred men to launch the vessel, half of whom glided down the ways on board, after the remainder had knocked out the supporting blocks. A large crowd watched the big ship enter the water.

The successful launching of the new battleship is regarded with great satisfaction, on account of the absence of the feet from the Atlantic shores and the public awakening to the necessities of a large navy. It marks the opening of a new era in American naval construction scarcely less notable than that initiated by the launching of the *Dreadnought*. The *Michigan*, when completed, will approach more nearly to the class of the famous British vessel than any other war-craft in the American navy. The armament will be enormous. It boasts eight twelve-inch guns, her main battery will include two submerged torpedo tubes, and the secondary battery will consist of twenty-two three-inch rapid-fire guns, two three-pounder semi-automatic guns, two three-inch field-pieces, and four machine guns of .30 caliber. The main battery will be located in pairs in two forward and two aft turrets on the center line.

The hull will be protected along the water line by a complete belt of armor eight feet wide, eleven inches thick throughout the machinery spaces and twelve inches at the magazine spaces. Ten eight feet above the main belt there will be the cuirassate armor, eight inches thick at the top to ten inches thick at the bottom. There will be a complete protective deck from stem to stern. The supply of ammunition will be

carried in two divisions at the bow and the stern of the ship. The crew of the *Michigan* will number 31 officers and 738 men.

The propelling engines are to be of the vertical twin-screw, four-cylinder, triple-expansion type, of a combined indicated horse-power of 16,500. Each engine will be in a separate water-tight compartment. Each of the two funnels will be 100 feet high above the base line.

The Central Figures are (left) Governor Warner of Michigan, Miss Carol Newberry, who christened the Ship, and her Father, Assistant-Secretary of the Navy Newberry

Preparing to Launch the great new Battleship "Michigan," whose enormous Armament—she will carry eight 12-inch Guns—entitles her to Comparison with the British "Dreadnought"

When New York is Finished

THE ANSWER (ON THE RIGHT-SEEKING COACH): "The house you are on the roof of this building is occupied by the janitor, who has three of the upper fifty stories. His children, whom you see at the corner of the fence, have never been on the street for the reason that the journey thither would take too long."

The City Government's New Home

(See page 19.)

New York is beginning to prepare a home for the different departments of the municipality, at present located in various parts of the city. The new Municipal Office Building will be erected at the corner of Park Row and Chambers Street, upon the site of the *Stevens Building*, now in process of demolition. The ground floor will be twenty feet above the Subway; the main building, containing twenty-three stories, will be 320 feet in height; and the tower, with eight stories, is to be another 210 feet from the roof of the main building to the top of the figure surmounting the edifice, which will itself be twenty-four feet in height. The length of the main front of the building, from corner to corner, is to be 380 feet. The clock dial will have a diameter of twenty-five feet.

Limitations

"Well, madam, wasn't the chamberlain all right?" solicitously inquired the reptile-fancier, noticing the disappointed countenance of a recent customer.

"Yes, he was perfectly dear about changing color," began the fair purchaser; "he turned blue and green and brown whenever I wore those colors; but I happened to fasten him on my dress one day when I wore a Scotch plaid, and the poor dear burst himself trying to make good."

A Parallel Case

In the late financial stringency a clerk in one of the New York banks was trying to explain to a stolid old Dutchman why the bank could not pay cash to depositors as formerly, and was insisting that he be satisfied with Clearing House checks. But the old German could not grasp the situation, and finally the president of the bank was called upon to enlighten the dissatisfied customer. After a detailed explanation of the financial situation, the president concluded, "Now, my good man, you understand, don't you?"

"Yes," dubiously replied the Dutchman, "I think I understand. It's just like die, von my baby values up in der night and cries for milk, I give her a milk-teet."

Shakespeare

POSSESSED the highest type of literary genius. It is more than two centuries since he ceased to write, but when shall he cease to be read?

He grasped all things. He saw into the profound depths of human nature. Thoughts illimitable were at the point of his pen.

His personages live and move as if they had just come from the hand of a creator.

He was not a man of one idea, but part of the intense life of flesh and blood that seethed around him. Exuberant vitality of mind, body and soul was his supreme characteristic.

Personally he was a handsome, well-shaped man of a merry temperament, abounding in energy and overflowing with health.

His favorite eating place in London was the celebrated Falcon tavern. Here men like Ben Jonson, Marlowe, Ford, Fletcher, Herrick, Raleigh, etc., met him daily.

These literary giants of the heroic Elizabethan age were in the habit of discussing the burning topics of their time (which included the colonization of America) over foaming tankards of beer.

"Write, tell these great-men writers. 'Tisno, we have a hot witness party to dinner, some gentlemen, I hope we shall catch some of 'em. 'Tisno, I think I shall do the Berry Wine of Windsor."

Budweiser

SPARKLES with life. It has a brilliant glow—is full of solid nutriment—snappy and inviting to the palate—the combined soul of malt and hops—the cream of the harvest fields—the health bringing home beer.

The Contents of Three Million Pay Envelopes

HE average wage-earnings of those employed in manufacturing establishments in the United States have for the first time been made the subject of a governmental investigation. More than one-half of all the wage-earners in America have been classified, so that the results obtained are sufficiently representative to give fairly accurate results. The returns are those of wages and not of rates of pay, and, being based upon the time actually worked and not upon the weekly earnings, must be regarded as lower than the weekly income of those employed.

Of the 3,297,819 wage-earners covered by the investigation, 2,619,683, or 79.4 per cent., were men; 388,299, or 11.9 per cent., women; and 30,167, or 0.7 per cent., children. The payrolls of the 123,703 establishments for the week covered amounted to \$33,183,791, and of this the men received \$23,240,287, or 69.8 per cent.; the women, \$8,633,481, or 25.9 per cent.; and the children, \$312,023, or nine-tenths of one per cent.

The figures show that the average wage-earner employed in manufacturing received \$10.00 per week. The average man received \$11.16; the average woman, \$6.17; and the average child under sixteen years of age, \$3.46.

The highest average weekly earnings reported for the men in any manufacturing industry were \$21.68, paid to those engaged in lapidary work. The principal occupations in this industry are connected with the cutting, polishing, and setting of diamonds and other precious stones.

Other industries which were conspicuous for the high weekly earnings paid to men wage-earners embraced the manufacture of corsets (\$16.39), photolithographing and photoengraving (\$16.68), the manufacture of sanitary and art goods (\$16.45), and the manufacture of watches (\$16.16).

The lowest average earnings for men in any industry were \$5.23, paid to those engaged in the manufacture of turpentine and rosin. Most of the men employed in this industry were engaged in gathering the crude gum. The cottonseed oil and rusk industry was another in which the average weekly earnings (\$6.64) were low.

The average weekly earnings of women in some of the industries which employ considerable numbers were as follows: Cotton goods, \$6.03; hosiery and knit goods, \$6.01; silk and silk goods, \$6.11; boots and shoes, \$7.60; men's clothing, \$6.67; women's clothing, \$6.83; shirts, \$5.89; and glass, \$5.08.

The lowest average earnings for children were \$1.54 per week, received by the 165 children engaged in the manufacture of pickles, preserves, and saucers. Of the industries employing a considerable number of women, the grading, roasting, cleaning, and shelling of peanuts is the one in which the earnings of women were lowest. The average weekly earnings of the 392 women in this industry were but \$2.56. The only industries employing considerable numbers of children under sixteen years of age were glass, shirts, tobacco, and the five textile industries. In the cotton industry, which is the most important of the textiles, the average weekly earnings of the children were \$3.21.

More than half of all wage-earners received \$9 and upward during the week. The largest number, 461,975, earned from \$12 to \$10; then came 439,238, earning from \$10 to \$12; 300,267, earning from \$12 to \$20; and 378,009, earning from \$9 to \$10. The number of those earning \$5 and less weekly was 476,768. Only 51,728 received \$25 and over.

The average earnings of the men in some of the more important industries were as follows: Iron and steel, steel works and rolling mills, \$12.56; iron and steel, blast furnaces, \$11.71; foundry and machine shop products, \$11.88; lumber and timber products, \$9.25; furniture, \$10.16; cotton goods, \$7.71; boots and shoes, \$11.89; men's clothing, \$12.23; women's clothing, \$13.22; tobacco, cigars, and cigarettes, \$11.14; newspaper and periodical printing and publishing, \$13.13; and glass, \$14.10.

The Southern States proved to be generally conspicuous for the low average of weekly earnings. While the average earnings of men in New England amounted to \$15.52, in the South they were only \$5.14—a difference of \$10.38. For women the average was, in New England, \$7.23, in the South, \$3.77—a difference of \$3.46; while for children the average was, in New England, \$4.45; in the South, \$2.73—a difference of \$1.72. For all classes the average weekly earnings in the North were \$7.82 as contrasted with but \$4.16 in the South.

The leading States with respect to average weekly earnings were: Montana, \$16.10; Nevada, \$17.78; Arizona, \$16.15; and Wyoming, \$15.75. New York was twenty-fifth, with \$16.40; Pennsylvania, twenty-third, with \$16.51; Illinois, fifteenth, with \$17.50; Ohio, twentieth, with \$16.83; and Massachusetts, thirty-second, with \$9.68. North Carolina, with \$4.96, and South Carolina, with \$4.05, reported the lowest averages.

Something About Ginger

Ginger is the dried underground stem of a plant that grows wild in southeast Asia and in the Malay Archipelago, and is cultivated extensively in South America and the West Indies, particularly Jamaica. The ginger produced in Jamaica is recognized as of superior quality and commands more than double the price of any other. The botanical name of the stem is rhizome, the real roots of the ginger plant being the fibres which are given off from the rhizomes. Leafy shoots rise from the underground stems to a height of one to three feet, according to conditions of soil and climate. The plant bears a blossom on a stalk separate from the leaves. Ginger requires a rich soil, well drained, rich vegetable humus being best adapted to its cultivation. These conditions being met, it may be grown from the sea level to high mountainous regions, provided the rainfall be abundant or irrigation adopted.

The plant is propagated by division of the rhizomes, each rhizome being carefully divided into small pieces, pains being taken to leave at least one shoot bud on a cutting. The cuttings are at once set out in the field in holes that have been specially prepared for the purpose at distances of about a foot apart. It is essential that the land should be well cleaned and trenched, the weeds and rubbish being buried in the trenches to enrich the soil. The best time for planting is in March or April. The plant is cultivated in much the same way as the potato. Manure is generally placed in the holes when the planting takes place, and also spaded into the ground when the same land is used for several years in succession.

The plant is in blossom about September. Thereafter the shoots wither, and the rhizomes increase in size, and by January or February the spire is ready to gather. The plant is dug out of the soil with a fork, care being taken not to injure the rhizomes, or "hands," as they are termed in Jamaica. The "hands" vary in size, some being very large and weighing over half a pound.

After the "hands" have been divested of the fibrous roots and all adhering mud and dirt they are washed for some minutes in boiling water, to destroy their vitality, and then dried in the sun, when they become the ginger of commerce. The darker kinds are sometimes bleached by exposure to fumes of chloride of lime or burning sulphur. What is known as "scraped" or "soured," and "white" ginger is prepared by scraping the "hands" with a knife until the dark outer skin is removed, and then drying them in the sun. When cultivated under favorable conditions, an acre of land will produce as much as 3000 pounds.

Ginger is shipped in bags, which generally contain a hundredweight each of the spire. There is a considerable acreage of land under cultivation of ginger in Jamaica, mostly in the hands of small settlers in the southern part of the island. During the last fiscal year about 1,000,000 pounds were exported from this island, some 500,000 pounds being taken by the United States, and 500,000 by Great Britain. Canada took nearly all the balance. The crop last year was little more than two-thirds the usual amount, because of the severe and long continued drought in the island.

CHARLES K. SHAROOD

What Backbone is to the Body the Sole is to a Shoe—

BEACH HAVEN, N. J.

Wealth Against Commonwealth

BY
HENRY DEMAREST LLOYD

This is the most complete review in existence of the great combination of bearing and capital which forms the basis of every trust or monopoly. Mr. Lloyd has traced the growth of this institution from its origin to its present vast proportions, where it controls the markets and commerce of the world.

HARPER & BROTHERS, NEW YORK

Side-Lights on Astronomy

By
SIMON NEWCOMB

General readers who are interested in astronomy but not in its technicalities will find in Professor Newcomb's volume interesting chapters on the problems that astronomers are facing to-day. How large is the universe? Has it definite bounds? How long will it endure? These and kindred questions are discussed in the light of the most recent knowledge.

Illustrated. Price, net, \$2.00
